
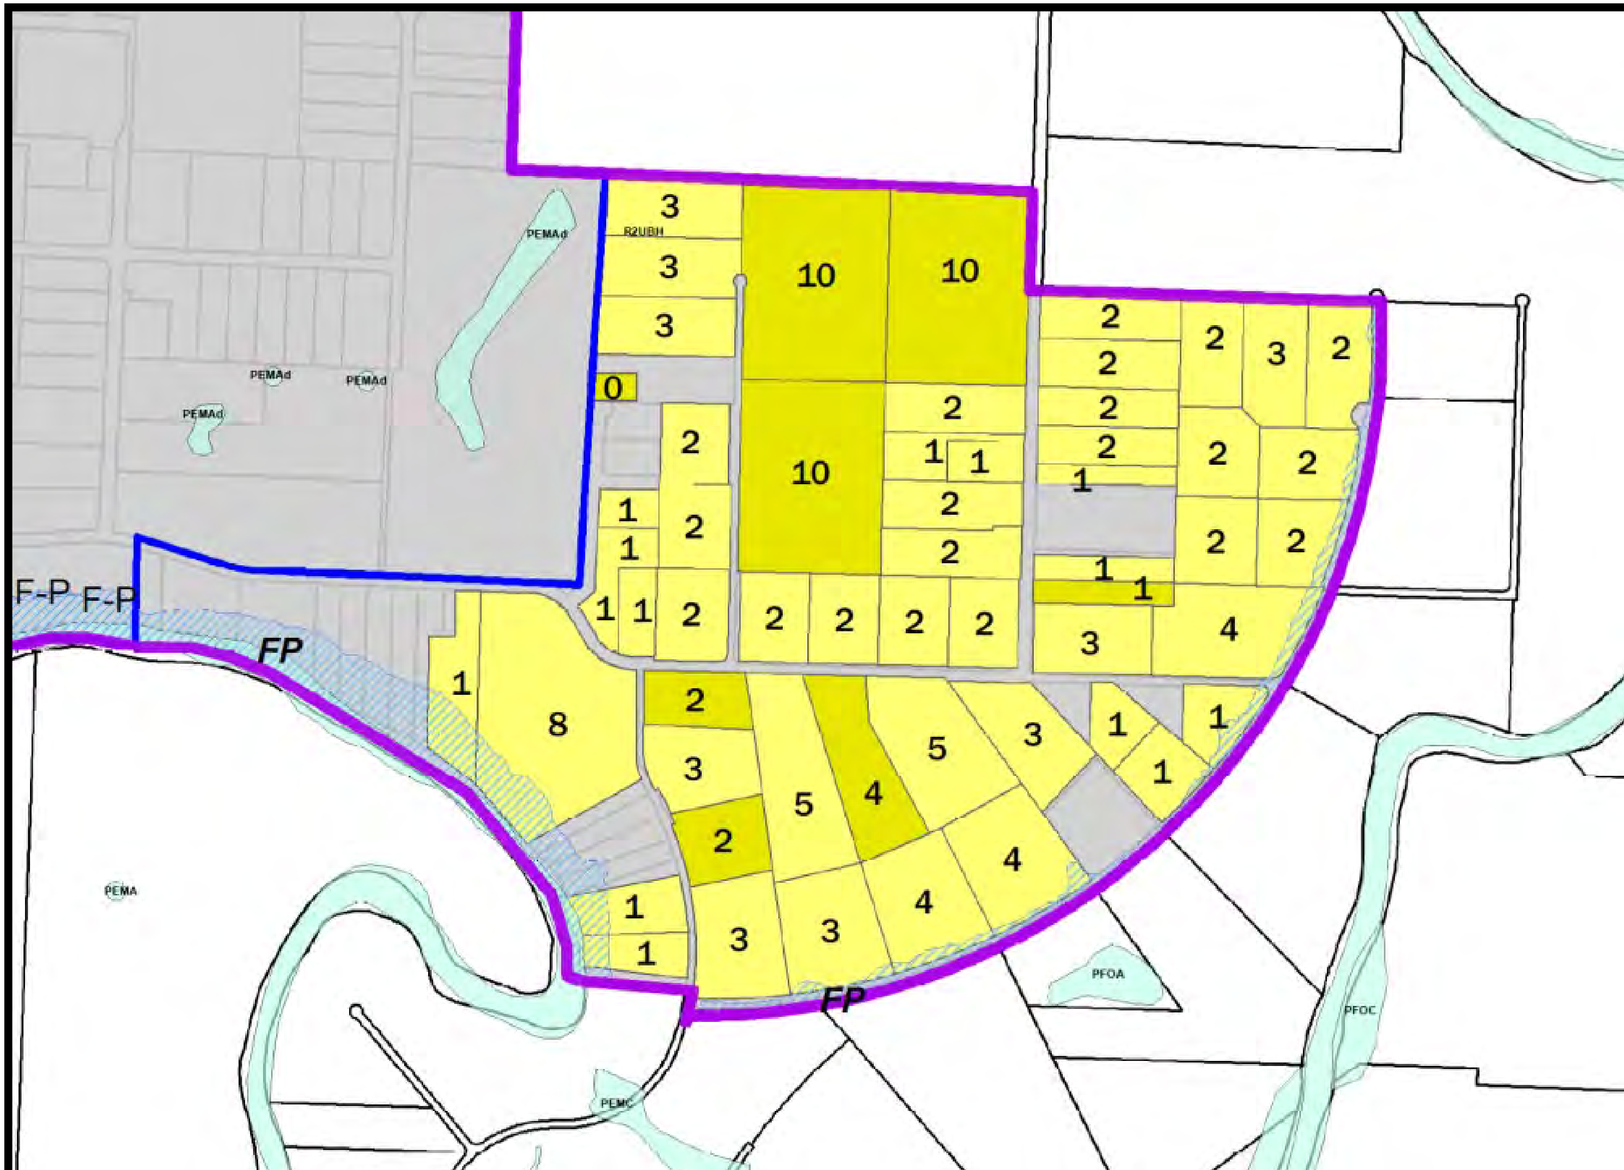
City of McMinnville: HB2001 Applicable Zones

Rural Residential Reduced Capacity



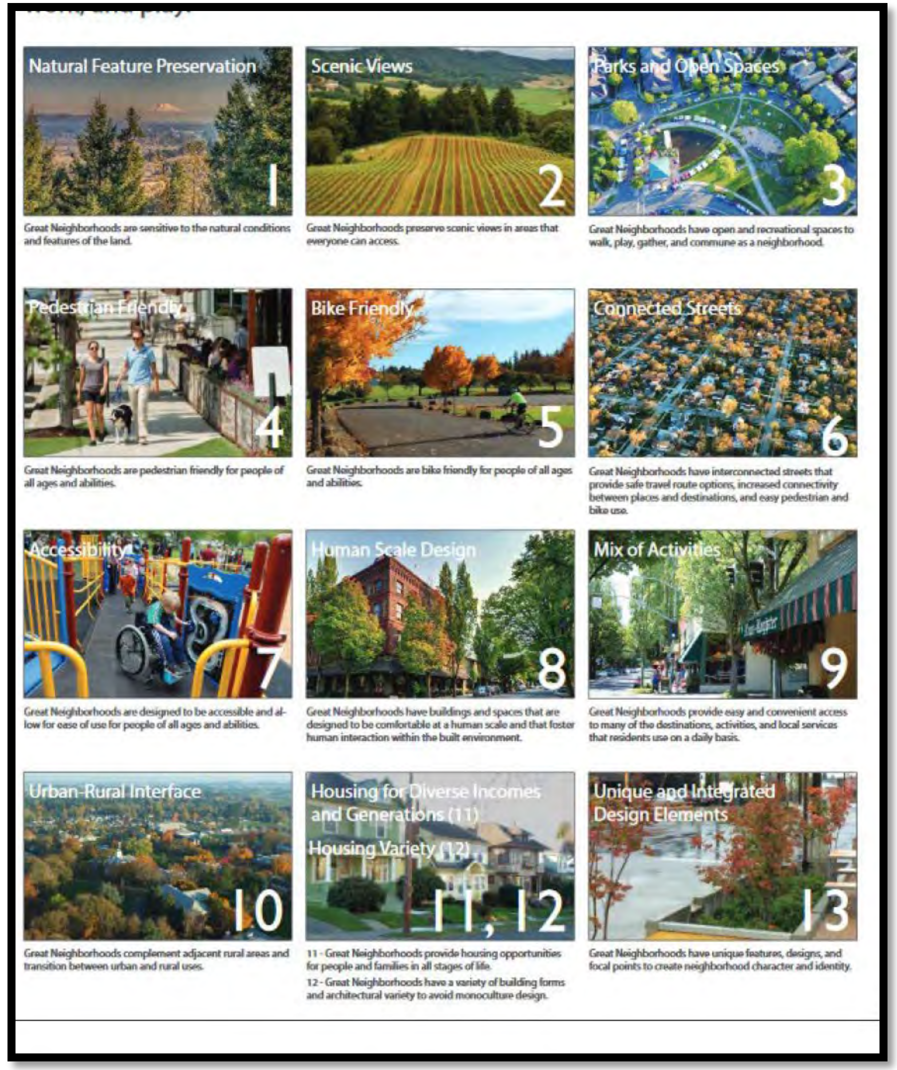
VALUES THAT SHAPE OUR HOUSING STRATEGIES

EVERYBODY DESERVES TO LIVE IN A GREAT NEIGHBORHOOD

<u>Great Neighborhood Principles:</u>

Great neighborhoods must have . .

- Variety of housing types serving a variety of household incomes.
- Variety of housing types attractive to a variety of generations.
- Human Scale Design
- Unique and Integrated Design Elements



Natural Feature Preservation
1
Great Neighborhoods are sensitive to the natural conditions and features of the land.

Scenic Views
2
Great Neighborhoods preserve scenic views in areas that everyone can access.

Parks and Open Spaces
3
Great Neighborhoods have open and recreational spaces to walk, play, gather, and commune as a neighborhood.

Pedestrian Friendly
4
Great Neighborhoods are pedestrian friendly for people of all ages and abilities.

Bike Friendly
5
Great Neighborhoods are bike friendly for people of all ages and abilities.

Connected Streets
6
Great Neighborhoods have interconnected streets that provide safe travel route options, increased connectivity between places and destinations, and easy pedestrian and bike use.

Accessibility
7
Great Neighborhoods are designed to be accessible and allow for ease of use for people of all ages and abilities.

Human Scale Design
8
Great Neighborhoods have buildings and spaces that are designed to be comfortable at a human scale and that foster human interaction within the built environment.

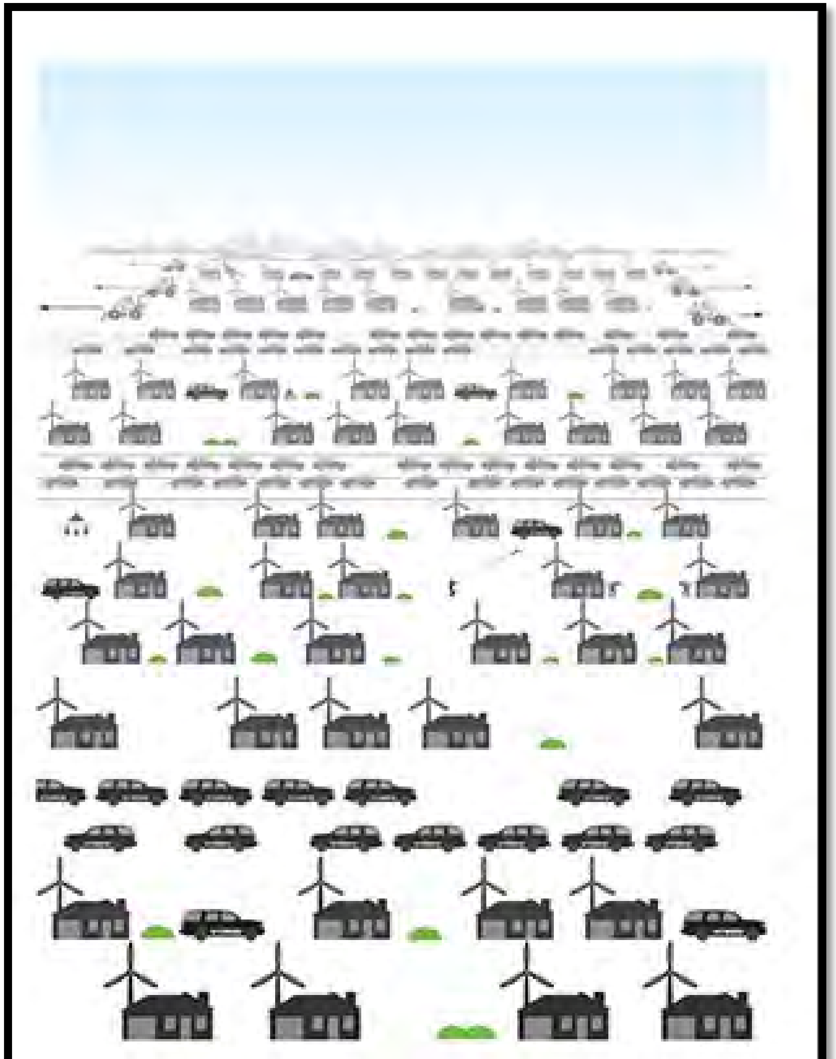
Mix of Activities
9
Great Neighborhoods provide easy and convenient access to many of the destinations, activities, and local services that residents use on a daily basis.

Urban-Rural Interface
10
Great Neighborhoods complement adjacent rural areas and transition between urban and rural uses.

Housing for Diverse Incomes and Generations (11)
Housing Variety (12)
11, 12
11 - Great Neighborhoods provide housing opportunities for people and families in all stages of life.
12 - Great Neighborhoods have a variety of building forms and architectural variety to avoid monoculture design.

Unique and Integrated Design Elements
13
Great Neighborhoods have unique features, designs, and focal points to create neighborhood character and identity.

WE DON'T LIKE SPRAWL BUT WE DON'T LIKE HIGH DENSITY



WE SHOULD NOT ASSUME THAT ALL MULTI-FAMILY HOUSING IS LOW INCOME

WE SHOULD NOT PUSH ALL LOWER INCOME HOUSEHOLDS INTO MULTI-FAMILY HOUSING

HOUSING CHOICE IS IMPORTANT

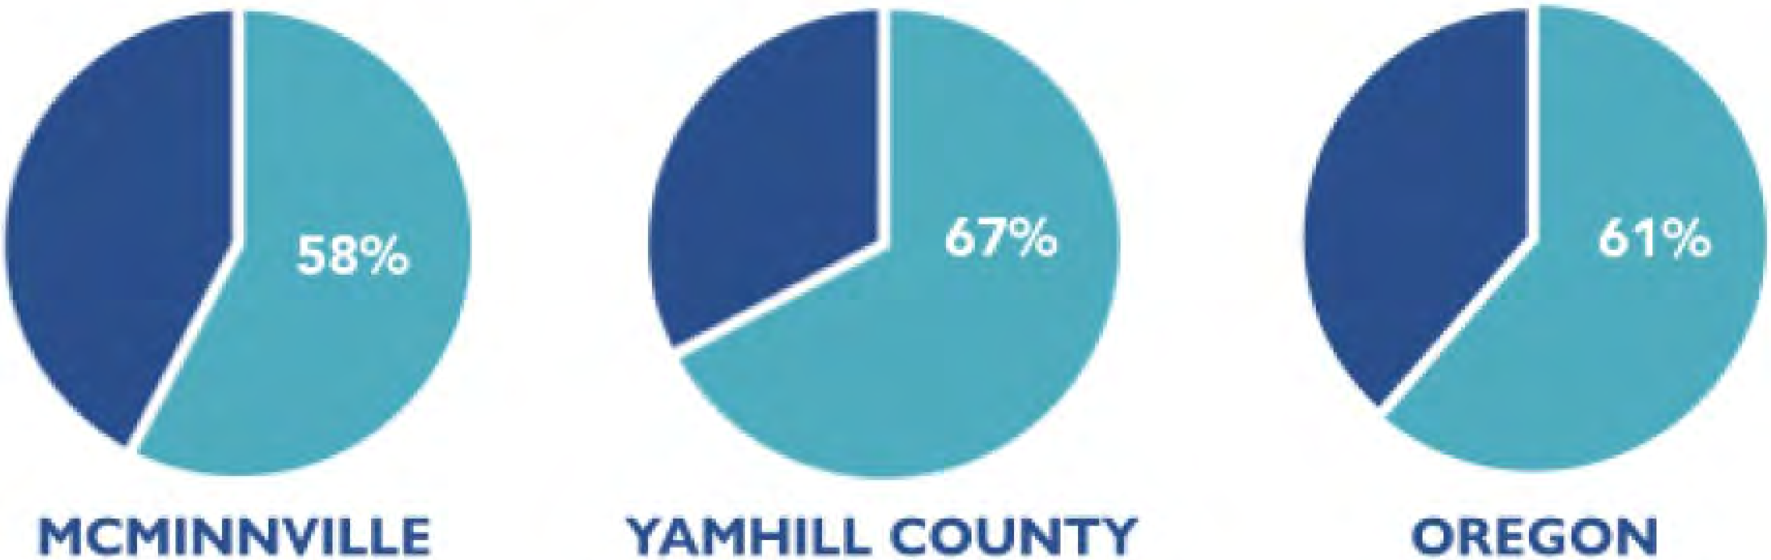
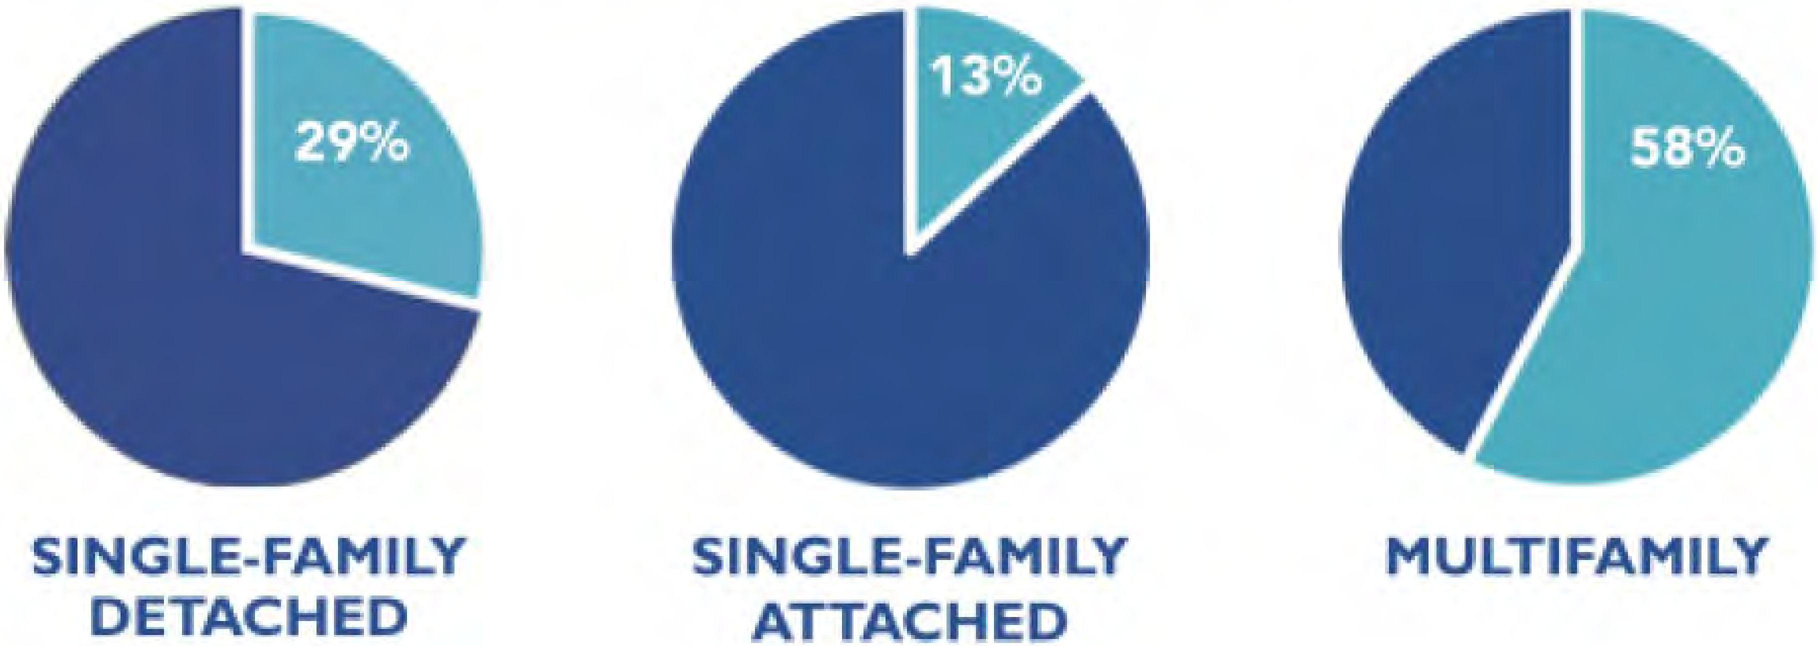
EXISTING HOUSING CONDITIONS

PERCENT OF HOUSING UNITS THAT ARE OWNER-OCCUPIED, 2016



A majority of McMinnville's housing is owner-occupied. Most of McMinnville's homeowners (95%) live in single-family detached housing.

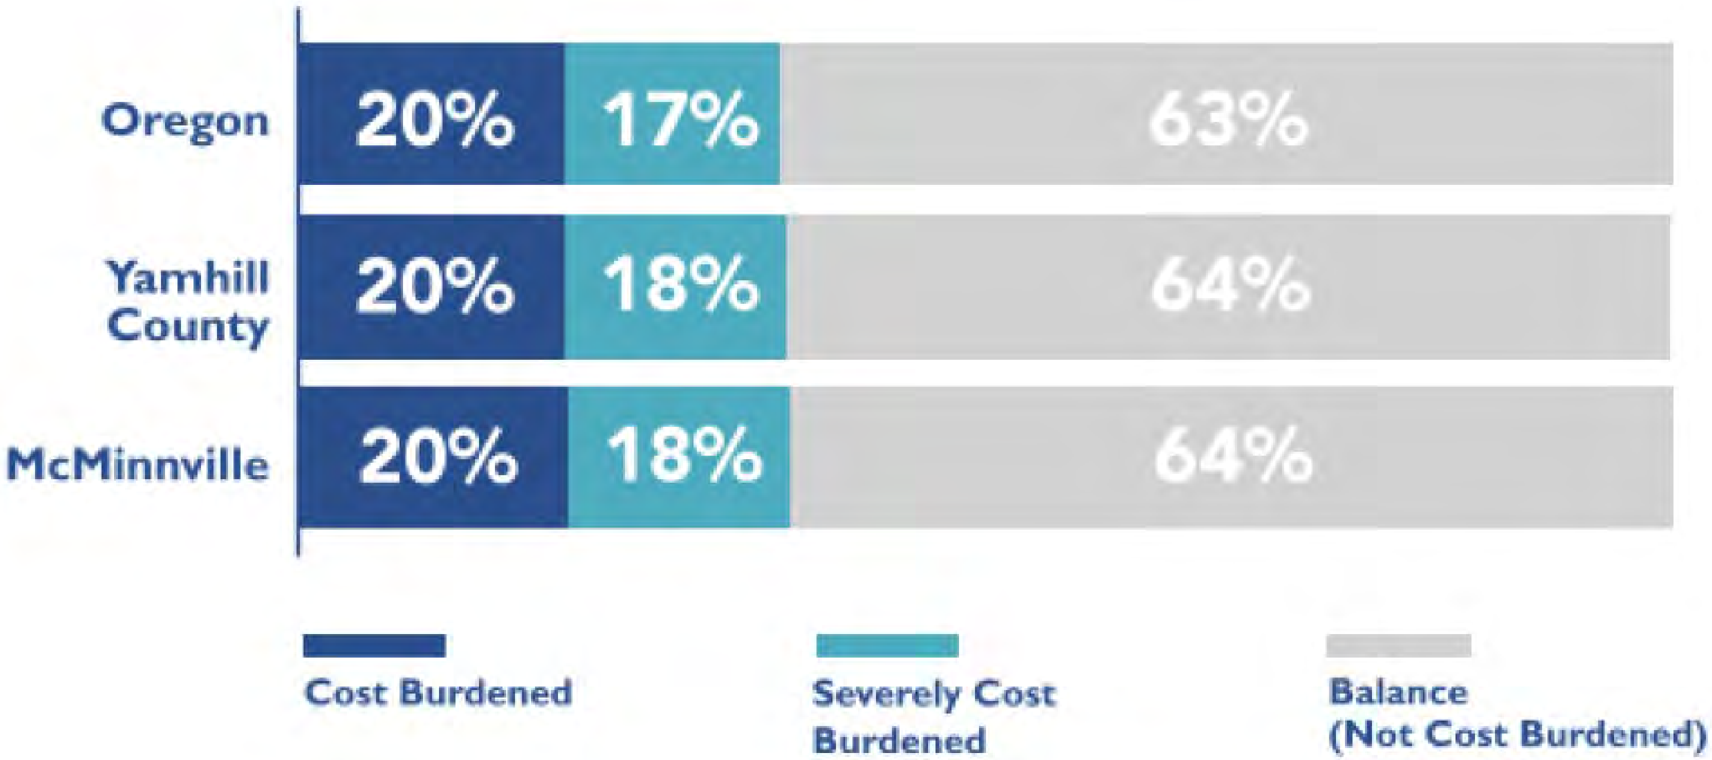
PERCENT OF MCMINNVILLE'S HOUSING UNITS THAT ARE RENTER-OCCUPIED BY TYPE OF HOUSING, 2016



A majority of renters in McMinnville live in multifamily housing.

McMinnville has a larger share of renters than both the county and state.

PERCENT OF HOUSEHOLDS THAT ARE COST BURDENED OR SEVERELY COST BURDENED, 2016



2021 ACS shows that 26.5% of McMinnville households (1,184) are severely cost burdened, putting McMinnville in a new category of housing distress statewide.

RESULTS

DEFICIT OF LAND FOR NEW HOUSING, MCMINNVILLE UGB, 2021-2041

A deficit of 1,101 dwelling units results in a deficit of:

218 GROSS ACRES
at historic densities
(5.05 units per gross acre)

202 GROSS ACRES
at proposed densities
(5.46 units per gross acre)

LAND NEED FOR HOUSING

To serve a population of 47,498 in 2041, the City of McMinnville needs an additional 202 gross buildable acres dedicated to housing.

Planning Horizon	Land Need
2021 – 2041 (UGB)	202 Acres
2041 – 2067 (Urban Reserve Area)	1066 Acres

- **Balanced employment across industry secto**
- Presence and involvement of **postsecondar**
Community College)
- **Location advantages:**
  - Good location in proximity to major m
  - High quality soils in surrounding areas, climate suited for agriculture
  - Natural environment assets nearby, including Yamhill River, access to the ocean and mountains

WEAKNESSES

- **Relatively low educational attainment**
- **A limited labor pool** for local companies and those looking to relocate
- **Difficult access to and from I-5** and no near-term possibility of a more direct connection
- **End-of-the-line location for wine country visitors** coming from the Portland area
- **Lack of housing options**
- **Low levels of professional and office-using employment**
- Comparatively **high poverty rates** and **low median household income**

OPPORTUNITIES

- **Proximity to Portland** allows McMinnville to capitalize on urban infrastructure and amenities
- **Local airport** has comparative advantages over other regional airports
- **Highway 99 bypass:** future completion will improve access to McMinnville
- A stronger framework for **regional collaboration**, improved opportunity in surrounding communities
- Opportunity sites for **new downtown development**
  - New housing development – **higher density**, diversity of types, live-work units
- Improved connections to the **University of Oregon and Oregon State University**
- **Stronger branding and improved gateways** into McMinnville
- **Innovation in agriculture and food systems,**
  - Wine-oriented makerspace
  - Food hub
  - $6M gift to **Linfield College's wine program**
  - Expanded **culinary and craft beverage** retail offerings
- Better use of recreational assets
  - Creating new trails
  - Hosting tournaments and events
  - Improvements to the Community Center and pool
  - Bike tourism, improved and expanded bike routes

THREATS

- **Limited land availability** for residential, commercial and industrial development
- **Regulatory challenges** associated with UGB expansion
- Worsening **housing affordability**
- **Brain drain** due to local graduates leaving for other job markets
- Absorption of projected growth without detrimental **impacts to character, congestion, affordability**
- Future **oversaturation of wine/tourism** and increasing concentration of **low-wage service industry jobs**
- Need to find a sustainable solution to **homelessness**
- Future impacts of **climate change** on agriculture and related industries, including tourism

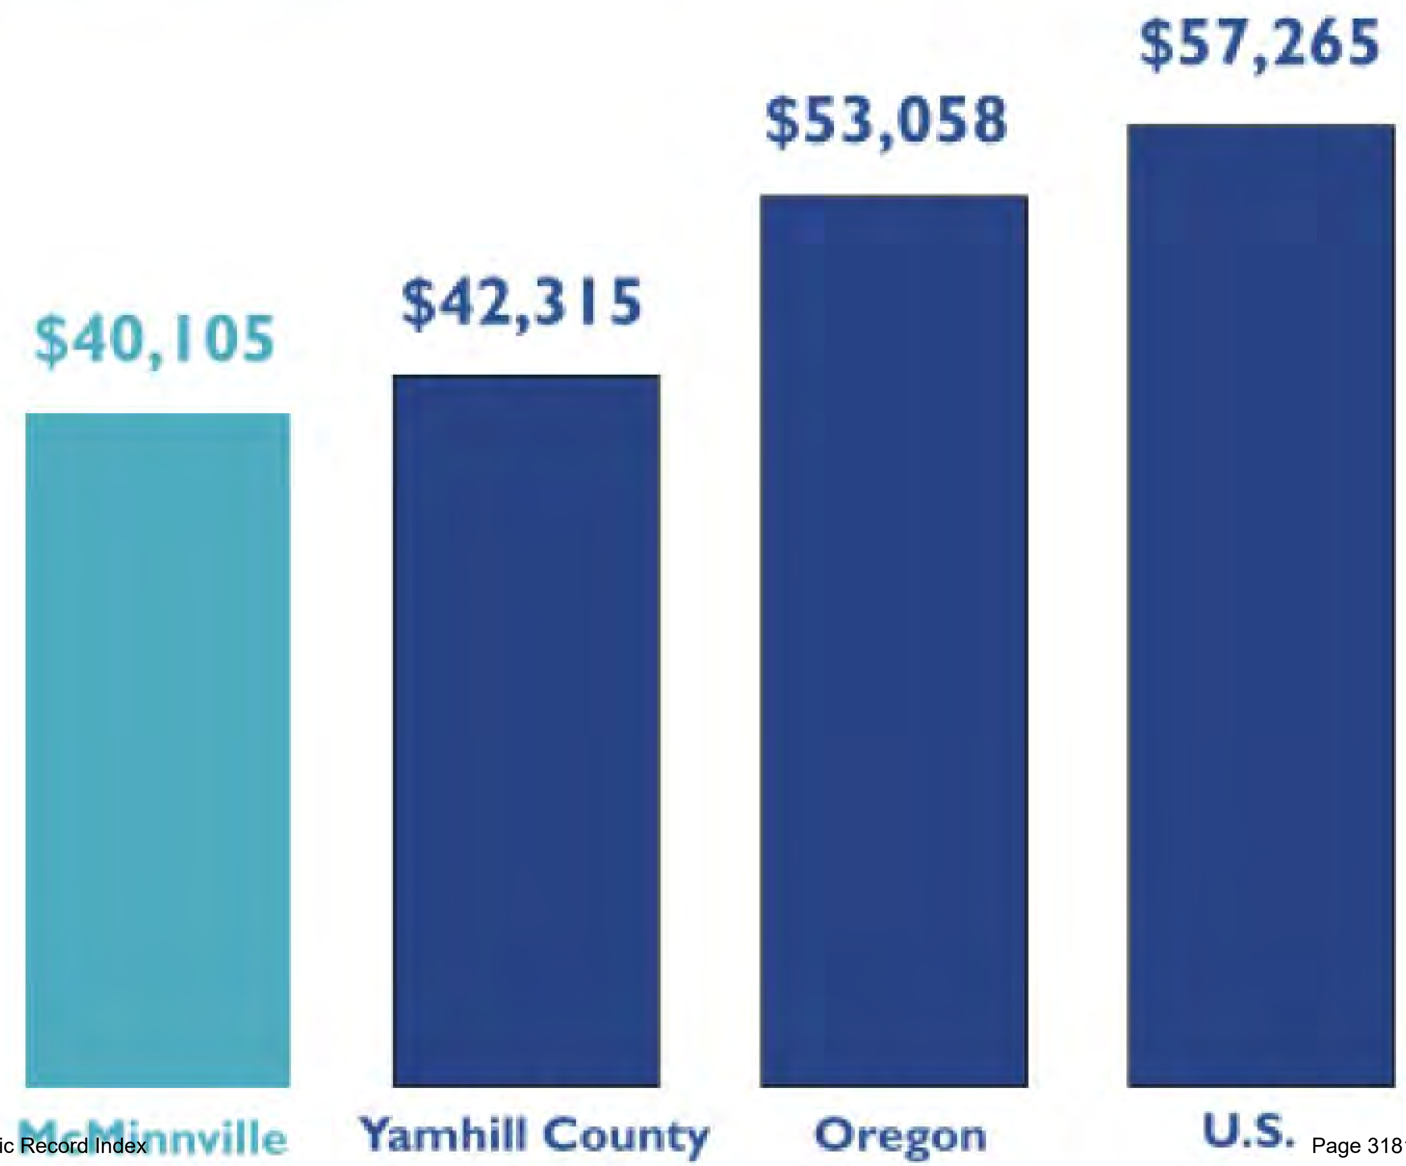
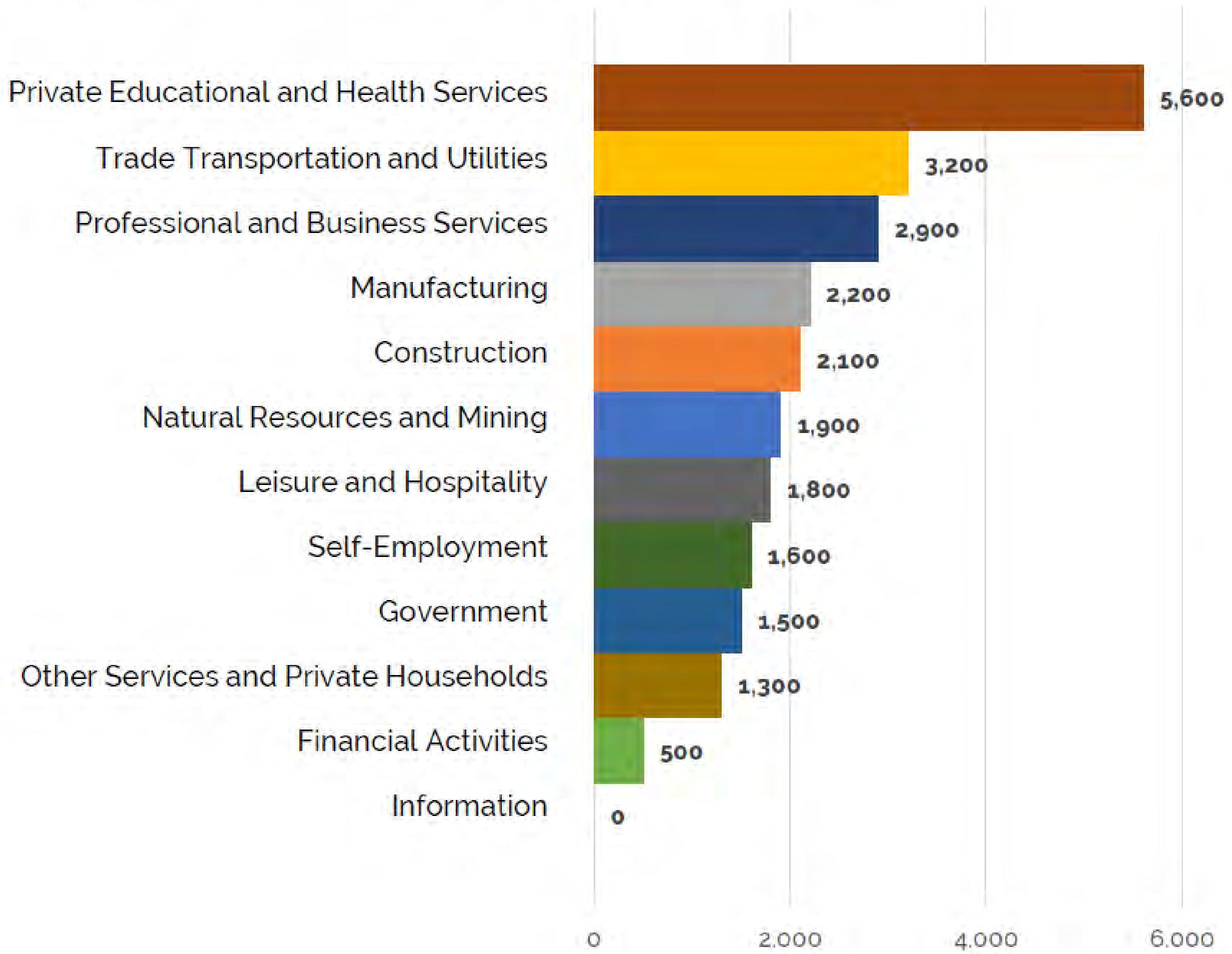
U.S. Bureau of Labor Statistics



Employment

FIGURE 27. FORECASTED EMPLOYMENT GROWTH (JOBS) BY INDUSTRY, MID-VALLEY REGION, 2014-2024

Source: Oregon Employment Department, 2016; Community Attributes Inc., 2018



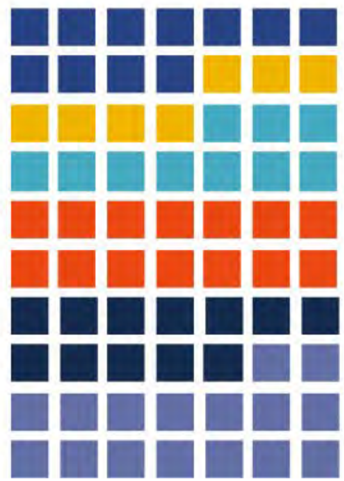
- Educational and Health Services, the largest industry sector in Yamhill County, is expected to add 5,600 jobs in the Mid-Valley Region, more than other industry sector.
- Trade, Transportation and Utilities and Manufacturing are drivers of demand for industrial space; these sectors together are expected to add 5,400 jobs in the Mid-Valley Region by 2024.

JOBS BY SECTOR, MCMINNVILLE, 2017

Source: Oregon Employment Department, Quarterly Census of Employment and Wages

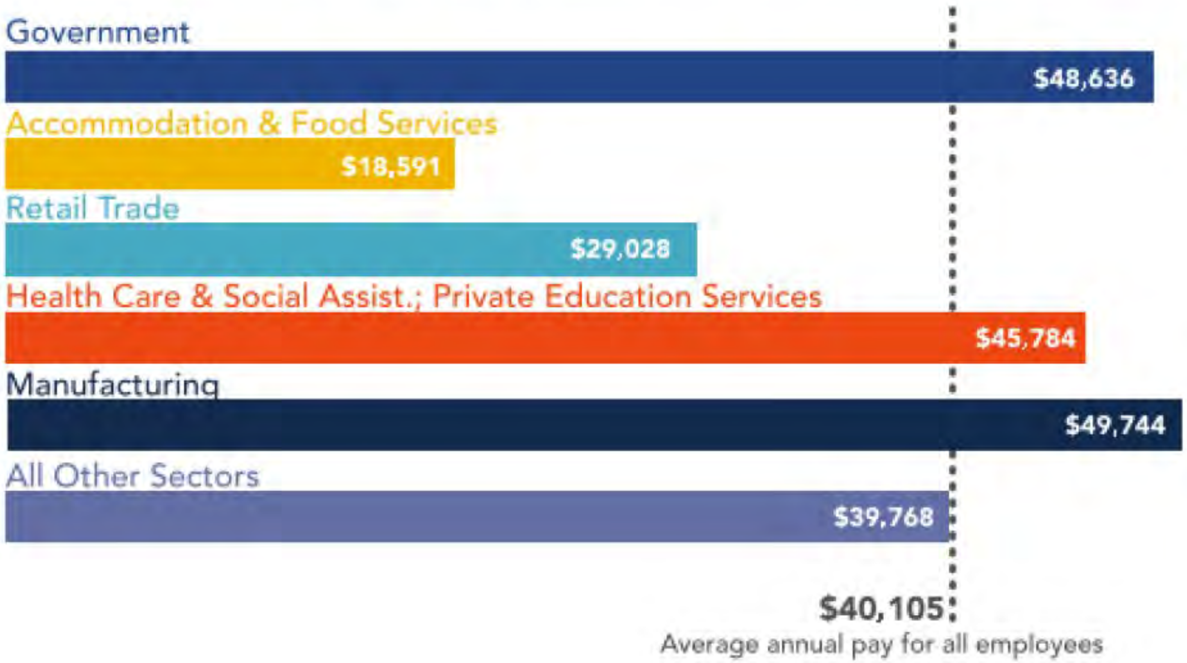
1square represents 500 jobs

Government:	2,082 employees / **14%**
Accommodation & Food Services:	1,503 employees / **10%**
Retail Trade:	2,170 employees / **15%**
Health Care & Social Assist.; Private Education Services:	3,159 employees / **21%**
Manufacturing:	2,277 employees / **15%**
All Other Sectors:	3,773 employees / **25%**



Food and Beverage manufacturing accounts for about one quarter of McMinnville's employment in the manufacturing sector.

AVERAGE PAY BY SECTOR, MCMINNVILLE, 2017



McMinnville's employment in Healthcare, Social Assistance, and Private Education has the largest share of employment and higher-than-average wages.

Strategic Framework

FOUNDATIONAL GOALS AND STRATEGIES...
are meant to be broadly beneficial across multiple industry sectors.

1. **Accelerate Growth in Living-Wage Jobs** Across a Balanced Array of Industry Sectors
2. Improve Systems for **Economic Mobility and Inclusion**
3. Maintain and Enhance our **High Quality of Life**

TARGET SECTOR GOALS AND STRATEGIES...
are intended to pursue opportunities and improve outcomes within clusters or sectors of related industries.

4. Sustain and Innovate within **Traditional Industry and Advanced Manufacturing**
5. Foster Opportunity in **Technology and Entrepreneurship**
6. Be a Leader in **Hospitality and Place-Based Tourism**
7. Align and Cultivate Opportunities in **Craft Beverages and Food Systems**
8. Proactively Assist Growth in **Education, Medicine and Other Sciences**

COMPONENTS OF ECONOMIC OPPORTUNITY ANALYSIS

- **Determining Job Growth in Planning Horizon (2021 – 2041, 2041 – 2067, based on population growth)**
- **Determine Jobs/Acre for Industrial and Commercial Uses**
- **Buildable Lands Inventory – what is available**
- **Capacity – how many new jobs will be developed on current land inventory.**
- **Need – how much more land is needed to meet employment needs for planning horizon and project population growth.**

Planning Commission
ZOOM Online Meeting:
May 20, 2021

Please Note that this meeting will be conducted via ZOOM meeting software due to the COVID-19 event.

6:30 PM Regular Meeting

ZOOM Meeting: You may join online via the following link:

https://mcminnvilleoregon.zoom.us/j/96025769049?pwd=cnVXQnJuR3dmbW9yVkRzVHFDYWk0UT09

Zoom ID: 960 2576 9049
Zoom Password: 747182

Or you can call in and listen via zoom: 1 699 900 9128
ID: 960 2576 9049

Public Participation:

Citizen Comments: If you wish to address the Planning Commission on any item not on the agenda, you may respond as the Planning Commission Chair calls for "Citizen Comments."

Public Hearing: To participate in the public hearings, please choose one of the following.

1) *Email in advance of the meeting – Email at any time up to 12 p.m. the day of the meeting to Sarah.Sullivan@mcminnvilleoregon.gov, that email will be provided to the planning commissioners, lead planning staff and entered into the record at the meeting.*

2) *By ZOOM at the meeting - Join the zoom meeting and send a chat directly to Planning Director, Heather Richards, to request to speak indicating which public hearing, and/or use the raise hand feature in zoom to request to speak once called upon by the Planning Commission chairperson. Once your turn is up, we will announce your name and unmute your mic.*

3) *By telephone at the meeting – If appearing via telephone only please sign up prior to the meeting by emailing the Planning Director, Heather.Richards@mcminnvilleoregon.gov as the chat function is not available when calling in zoom.*

------- MEETING AGENDA ON NEXT PAGE -------

The meeting site is accessible to handicapped individuals. Assistance with communications (visual, hearing) must be requested 24 hours in advance by contacting the City Manager (503) 434-7405 – 1-800-735-1232 for voice, or TDY 1-800-735-2900.

*Please note that these documents are also on the City's website, www.mcminnvilleoregon.gov. You may also request a copy from the Planning Department.

6:30 PM – REGULAR MEETING

1. **Call to Order**

2. **Approval of Minutes**

   - **April 15, 2021** *(Exhibit 1)*

3. **Citizen Comments**

4. **Public Hearing:**

A. **<u>Quasi-Judicial Hearing: Comprehensive Plan Map Amendment (CPA 2-20) and Zone Change, including Planned Development Overlay Designation (ZC 3-20)</u>** – (*Exhibit 2)*

Request: Approval to amend the Comprehensive Plan Map from Industrial to Commercial, and an amendment to the Zoning Map from M-2 (General Industrial) to C-3 PD (General Commercial with a Planned Development Overlay), for approximately 37.7 acres of a 90.4-acre property.

The 37.7 acres includes 4.25 acres intended for right-of-way dedication for a future frontage road. The application also shows a portion of the area subject to the map amendment intended for a north-south extension of Cumulus Avenue and future east-west street connectivity.

The request is submitted per the Planned Development provisions in Section 17.51.010(B) of the Zoning Ordinance, which allows for a planned development overlay designation to be applied to property without a development plan; however, if approved, no development of any kind can occur on the portion of the property subject to the C-3 PD overlay until a final development plan has been submitted and approved in accordance with the Planned Development provisions of the Zoning Ordinance. This requires the application for the final development plan to be subject to the public hearing requirements again at such time as the final development plans are submitted.

Location: The subject site is located at 3310 SE Three Mile Lane, more specifically described at Tax Lot 700, Section 26, T.4S., R 4 W., W.M.

Application: Kimco McMinnville LLC, c/o Michael Strahs

B. **<u>Legislative Hearing: Proposed Amendments to the Comprehensive Plan to adopt: A New Housing Needs Analysis (G 1-20); A New Housing Strategy (G 2-20); and A New Economic Opportunities Analysis (G 3-20)</u>** – *(Exhibit 3)*

The meeting site is accessible to handicapped individuals. Assistance with communications (visual, hearing) must be requested 24 hours in advance by contacting the City Manager (503) 434-7405 – 1-800-735-1232 for voice, or TDY 1-800-735-2900.

*Please note that these documents are also on the City's website, www.mcminnvilleoregon.gov. You may also request a copy from the Planning Department.

Requests: G 1-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Housing Needs Analysis, including a residential buildable land inventory. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to amend the analysis to address new provisions of state law, evaluate efficiency measures and update the buildable land inventory to reflect the land added to the Urban Growth Boundary in December 2020.

G 2-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Housing Strategy. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to address new provisions of state law.

G 3-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Economic Opportunities Analysis, including a buildable land inventory for employment and other non-residential land use. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to update the buildable land inventory to reflect the land added to the Urban Growth Boundary in December 2020.

Applicant: City of McMinnville

C. Action Item Zoning Ordinance Text Amendments: Allowing Childcare as an Outright Permitted Use in Commercial and Industrial Zones (G 1-21) – Hearing conducted and closed at April 15, 2021,PC Meeting *(Exhibit 4)*

Request: This is a legislative amendment initiated by the City of McMinnville to remove regulatory barriers for the development of childcare centers in the city's commercial and industrial zones where development standards can be implemented that would allow for the permitted outright use of childcare centers without negative impact to adjacent properties.

Applicant: City of McMinnville

5. Commissioner/Committee Member Comments

6. Staff Comments

7. Adjournment

The meeting site is accessible to handicapped individuals. Assistance with communications (visual, hearing) must be requested 24 hours in advance by contacting the City Manager (503) 434-7405 – 1-800-735-1232 for voice, or TDY 1-800-735-2900.

MINUTES

May 20, 2021
Planning Commission
Work Session Meeting

6:30 pm
Zoom Online Meeting
McMinnville, Oregon

Members Present: Roger Hall, Robert Banagay, Gary Landenwalter, Sylla McClellan, Brian Randall, Lori Schanche, Dan Tucholsky, Beth Rankin, Sidonie Winfield, and Ethan Downs – Youth Liaison

Members Absent:

Staff Present: Heather Richards – Planning Director and Tom Schauer – Senior Planner

1. Call to Order

Chair Hall called the meeting to order at 6:30 p.m.

2. Approval of Minutes

- **April 15, 2021**

Commissioner Langenwalter noted there were question marks in the minutes for someone's last name. He said it should be Kathleen McKinney.

Commissioner Tucholsky asked if Planning Director Richards had looked into spacing standards between childcare homes. Planning Director Richards would give an update later in the meeting.

Commissioner Schanche moved to approve the April 15, 2021 meeting minutes as amended. The motion was seconded by Commissioner Banagay and passed 9-0.

3. Citizen Comments

None

4. Public Hearing:

A. <u>Quasi-Judicial Hearing: Comprehensive Plan Map Amendment (CPA 2-20) and Zone Change, including Planned Development Overlay Designation (ZC 3-20)</u> – (*Exhibit 2)*

Request: Approval to amend the Comprehensive Plan Map from Industrial to Commercial, and an amendment to the Zoning Map from M-2 (General Industrial) to C-3 PD (General Commercial with a Planned Development Overlay), for approximately 37.7 acres of a 90.4-acre property.

The 37.7 acres includes 4.25 acres intended for right-of-way dedication for a future frontage road. The application also shows a portion of the area subject to the map amendment intended for a north-south extension of Cumulus Avenue and future east-west street connectivity.

The request is submitted per the Planned Development provisions in Section 17.51.010(B) of the Zoning Ordinance, which allows for a planned development overlay designation to be applied to property without a development plan; however, if approved, no development of any kind can occur on the portion of the property subject to the C-3 PD overlay until a final development plan has been submitted and approved in accordance with the Planned Development provisions of the Zoning Ordinance. This requires the application for the final development plan to be subject to the public hearing requirements again at such time as the final development plans are submitted.

Location: The subject site is located at 3310 SE Three Mile Lane, more specifically described at Tax Lot 700, Section 26, T.4S., R 4 W., W.M.

Application: Kimco McMinnville LLC, c/o Michael Strahs

Disclosures: Chair Hall opened the public hearing and asked if there was any objection to the jurisdiction of the Commission to hear this matter. There was none. He asked if any Commissioner wished to make a disclosure or abstain from participating or voting on this application. There was none. Chair Hall asked if any Commissioner needed to declare any contact prior to the hearing with the applicant or any party involved in the hearing or any other source of information outside of staff regarding the subject of this hearing. There was none. Chair Hall asked if any Commissioner had visited the site. If so, did they wish to discuss the visit to the site? Several Commissioners had visited the site, but had no comments to make on the visit.

Staff Presentation: Senior Planner Schauer said this was a request for a Comprehensive Plan Map amendment and zone change to go from Industrial/M-2 to Commercial/C-3 with a Planned Development overlay. The site was 37.74 acres of a 90.4 acre parcel including 4.25 acres for future transportation improvements. He discussed the applicable criteria, additional written testimony, and subject site. He then summarized the key issues. They had to demonstrate there was a need for this change and if the proposal met the need quantitatively. The proposal had to be suitable to meet the need qualitatively form the public perspective. Was this the right location and were there considerations for that location? Were there other compatibility/issues with the Comprehensive Plan? Did it meet the eligibility criteria for a PD overlay? Was this the right timing? Were there issues/effects associated with the provision of public facilities/transportation associated with the new zoning? Was there suitable mitigation associated with the change? There was a deficit of commercial land in the City and a surplus of industrial and the proposed amendment was consistent with the need that was identified in the Comprehensive Plan. What was proposed in terms of quantity did not fully meet the identified need but it met a portion of it. Staff thought the proposal with the conditions of approval was the right proposal to meet the need. The C-3 designation with Planned Development overlay would allow for specific issues related to the ongoing planning in this area to be addressed. Deferring the Development Plan provided additional time to work through the issues in the Three Mile Lane area. The eligibility criteria to use the PD overlay were satisfied. The timing was appropriate in terms of meeting the land need. There were unique issues regarding timing with this coming in before the Three Mile Lane Plan work was completed, but there was a condition to address that. There were no capacity issues identified with this change. Still pending were the issues associated with the provision of transportation and the mitigation proposed in the traffic analysis. Staff recommended continuing the hearing to July so staff and the applicant could continue to work on these issues.

In December 2020, the City adopted an amendment to the Urban Growth Boundary and adopted amendments to the Comprehensive Plan and zoning ordinance. Part of what was included in the plan was recognition of the need for an area plan for the Three Mile Lane area. That work was currently underway. By re-designating some of the industrial land that was already in the Urban Growth Boundary, the City could reduce the footprint of the UGB. He showed a map of the draft preferred alternative for the Three Mile Lane area plan. All the issues other than transportation mitigation had been satisfied or satisfied with conditions. The transportation mitigation was contingent on further information to be prepared and submitted by the applicant for review in advance of the July 15, 2021 continued hearing. He then reviewed the recommended conditions of approval. The questions and comments received from the Planning Commission included clarifying the location of the site relative to the Three Mile Lane area plan and he provided a map for the approximate location. They also asked if there were other Planned Developments that had been approved with deferred development plans. The answer was yes, many Planned Developments had chosen this option over the past 40 years. Another question was if this was the total acreage that was expected to be zoned commercial. This met a majority of the deficit, but not all of it and other rezoning could occur. Another question was how to address retail leakage without permitting duplication of retail services found elsewhere in town. Staff would like to know what retail leakage was actually occurring. They needed to clarify the more vague aspects of the Three Mile Lane plan market analysis table and discuss how to be careful not so much with the anchors but with the smaller shops and services. Stating it would be done so it didn't disturb downtown merchants was too vague. Staff suggested Economic Development and the developer work together on this issue. There was a request that in the design document some of the terminology needed to be more explicit in what things meant that were more general in nature. It was suggested to address directional signs as part of the wayfinding signage. There were also suggestions about front approaches for parking to address environmental issues as well as compact development. There were also some comments about human scale design and traffic mitigation.

Commission Questions: Commissioner Schanche thought they should consider not having the aisle in front of the store.

Commissioner Randall asked if only the Comprehensive Plan could be approved and not the zone change. Planning Director Richards said no, because they would not be able to amend the map for a commercial Comprehensive Plan map designation without a commercial zone on top of it.

Commissioner Winfield was hoping as they defined the Three Mile Lane design standards that they would allow mixed use developments versus a big box store being incorporated in. Planning Director Richards said this was a request for C-3 that allowed for mixed use. The recommended design standards were to ensure that whatever was developed had a distinctive flavor that reflected well on McMinnville since this was a gateway to the community. The preferred land use alternative for the Three Mile Lane area included a variety of preferred land uses.

Commissioner Langenwalter was not comfortable with the timing of the Three Mile Lane area plan and this proposed use. He was concerned that the application would come in before the Three Mile Lane design standards were adopted and they would not apply. Planning Director Richards said that was why they encouraged the applicant to apply for the Planned Development overlay so they could create that tie to the Three Mile Lane process. There was language in the condition of approval that the more prescriptive standards would apply.

Applicant's Testimony: Sam Knutson, Kimco McMinnville LLC, introduced the applicant's team.

Dana Krawczuk, land use attorney at Stoel Rives LLP, agreed the continuance to July 15 was appropriate so that additional work with ODOT could happen. She discussed the parcel location on SE Three Mile Lane, application proposal, and Three Mile Lane preferred alternative which was consistent with the application. The Planned Development overlay would be subject to the design standards that would be adopted within the Three Mile Lane area plan. The proposal matched the Three Mile Lane area plan object that stated, "a central feature of the preferred alternative was a sizable (over 30 acre) retail center south of Three Mile Lane at Cumulus." The site could offer a mix of commercial opportunity and space formats currently restricted or outright unavailable in downtown McMinnville. There was a current excess of industrial land inventory and a deficit of available commercial acreage of between 35.9 to 39 acres within the City limits and Urban Growth Boundary. By 2041, this commercial land deficit was projected to grow to 286 acres. Currently McMinnville residents completed 23% of their shopping needs outside the City, resulting in over $192 million in revenue leakage to surrounding counties over 25 miles away. This land use change would make the land more marketable to attract potential commercial uses. The proposal addressed the commercial land deficit with an expedient solution. The legislative timeline for the Three Mile Lane area plan adoption remained in flux. The applicant's team was actively working with ODOT and the City to assess the proposed land use change impacts and associated traffic mitigations. They looked forward to further Planning Commission discussion on the required improvements at the July 15 hearing.

Commission Questions: Commissioner Randall asked if the applicant planned to maintain ownership of the property or would others be allowed to purchase parcels. Michael Strahs, Kimco, stated it would depend on the demand in the market once the zoning was changed. They had owned the property for some time and if there were any sales they would most likely be limited to certain tenants that preferred to own.

Commissioner McClellan referred to the market analysis survey from 2019 and asked about the percentage of retail leakage online vs. in person shopping. Planning Director Richards could get that information from the consultant. She thought it was predominately in person. The study area was a little bit larger than the City limits. It was considered the market for the City. Ms. Krawczuk said it was over $97 million worth of leakage and a lot of dollars being spent outside of the community.

Public Testimony:

Proponents: None

Opponents: Mark Davis, McMinnville resident, thought this was a classic case of putting the cart before the horse. The preferred alternative was not a final document and had not been approved. In the December 2020 Urban Growth Boundary amendment it said the City would initiate the zone change. He did not think the applicant had the right to do something the City was supposed to do. The need this application was based on was the 2013 Economic Opportunities Analysis and it ignored the fact that the City recently had an Urban Growth Boundary expansion approved that had significant acres of commercial. He questioned whether there was a deficit of commercial land at this point. He thought the 2013 EOA was paid for by Kimco and it was inappropriate to use as justification for the application. He did not think this was what was best for the City, especially since retail sales had been suffering and it might affect other merchants in the McMinnville market. It was also another step in the direction of destroying the Bypass if they proposed a traffic light that would bring traffic to a halt. If they set this up as a large retail area, it would inevitably make it very difficult to get the rest of the plan instituted. He thought they would regret it in the long run.

Commissioner Langenwalter asked what grounds could be used to deny the application. Mr. Davis did not think it met the need criteria and the Three Mile Lane area plan had not been approved yet.

Commissioner Tucholsky thought this could become an outlet mall based on other Kimco projects. Mr. Strahs said no decisions had been made for the property's use. They would come back through the site plan review process when they were ready to move forward with a project.

Allen Roodhouse, Kimco, said in 2013 they had asked the City to start an EOA process and the City informed them that they did not have the money to do it. Kimco had only paid for it, but had nothing else to do with the process. The characterization that they had some kind of plan to buy their way into the City was totally wrong.

David Koch, attorney, was speaking on behalf of his client, the owner of the neighboring property located immediately northeast of this property. His client's property was 9.6 acres located within the Three Mile Lane area plan. He thought the application was inconsistent with the community's multi-year efforts to create an implementable vision for the area's future land uses and multi-modal transportation system within the Three Mile Lane area. Many of the proposed findings relied heavily on the Three Mile Lane planning work in order to justify the suitability of this project in this location. However, that work was not yet completed and could not be used as justification. He thought it was likely the application would obstruct the planning efforts. The Planned Development overlay would only apply to a portion of the parcel and it would cause the portion of the parcel to stand apart from the other land within the planning area and would not support fairness and equity among all of the stakeholders. There would be disconnected and piecemeal Comprehensive Plan and zoning designations that would not satisfy the community's greater needs for the master planning and future development of this important gateway. The applicant had no project proposed and the transportation impact analysis would ask the Commission to accept a fictional worst case scenario under the current zoning versus the proposed zoning. He thought this downplaying of the impacts would reduce the amount and type of mitigation that would be required by their project. There were also serious access concerns for this property. While it did have frontage on Highway 18, its only current access point was a small driveway and was not adequate to serve any level of development of the property. The applicant had not acquired any rights of access through neighboring properties despite the fact that development of this property would require the condemnation of private property from a neighboring land owner, either by extending Cumulus Avenue south through his client's property or by building another connector street through private property to the east or west. There were some fundamental planning principles that were being violated—split zoning and spot zoning. The applicant wanted to rezone only a portion of a larger parcel. They should partition the site first and then rezone it. They should not be rezoning a parcel in the middle of a large planned area for special treatment and designation. It was possible that it would be incompatible with the Three Mile Lane plan in the future as this spot zoned Planned Development area would always be out of step with the surrounding properties. There was nothing unique about the application that would allow them a Deferred Development Plan. It was more than applying the Three Mile Lane plan to this site. It was about orderly development of the entire plan area. He asked for the record to remain open so they could evaluate and provide more testimony as information came in.

Stewart Kircher, Dayton resident, owned the property to the west of this site. He did not think the zoning should be changed until the Three Mile Lane plan was complete. He thought his early zone change would affect the future plans of the Three Mile Lane district. This was a unique area and creating the district correctly would require joint cooperation and a coordinated timeline from all parties involved. This would affect the future of the development of his property and other surrounding properties. With no pending development plans, he thought this was unnecessary application and should be denied until the entire area stakeholders had a fair and coordinated plan.

Rebuttal: Ms. Krawczuk explained the need for commercial in the City. The Economic Opportunities Analysis stated the City needed 35.8 acres of commercial and this application provided 33.5 acres and the UGB expansion added 26.7 acres. Combined that was 60.2 acres. It was more than the current EOA stated but she thought it was okay to have more as long as there was not a deficit in another category. The recent UGB expansion did not disqualify or provide a legal basis for not approving the application. Looking forward, the current EOA update showed a need for 286 acres of commercial in the future. In terms of the Three Mile Lane area, this application did not rely on its adoption from a legal standpoint. They were very aware of the concepts in the Three Mile Lane plan and were shaping the application to meet those. They were talking about a condition that would require when the policies were adopted they would apply. The comments about transportation would be addressed in the next hearing. There were comments about a Planned Development overlay being an outlier but that was her understanding of how the Planned Development overlay always applied. She thought people were concerned that they might take away the opportunity for other properties to be zoned commercial. That was not true. The Three Mile Lane plan expected many of these properties would be upzoned.

Mr. Roodhouse said their intent was not to jump the Three Mile Lane process so they could somehow get an advantage. There were prospective tenants that needed the property zoned commercial and that was the main reason they were applying for the change now. When the Three Mile Lane plan was adopted, they would be ready to go. They planned to make sure the access worked with Mr. Kircher's property and they would agree to a condition to that affect.

Commission Questions: Commissioner Langenwalter said Mr. Koch suggested the applicant was jumping the gun, but if this was their property they could request rezoning at any time regardless of what neighbors wanted to do. He did not think the Planning Commission had the authority to lump all of the properties together into a plan and enforce it.

Mr. Koch said they could develop their property under the current zoning if it met all of the criteria. However, they were asking for a Comprehensive Plan change and new zoning. He questioned if it was timely and orderly to make this kind of change now. They were trying to change what they were allowed to do on the property and justify why it should be allowed.

Commissioner Tucholsky asked how the property Mr. Koch was representing would be negatively affected by the zone change. Mr. Koch said his client was waiting for the Three Mile Lane plan process to be completed to see how he could develop consistent with that plan. The understanding was everyone was going to work together on the development proposal for this area. This applicant decided to jump forward on their own and it took the neighbors by surprise. His client was concerned about the transportation impacts that would affect the development of his property and that he might be left holding the bag for mitigation that was not covered. His client had discussions with the applicant about the issues, but was still testifying in opposition.

Commissioner Winfield was also concerned that this was coming in before the Three Mile Lane plan was finished. She thought it could wait a few months.

Mr. Koch thought it was more than development standards, it was about planning for this gateway area. He thought the timing was inconsistent with the planning work.

Ms. Krawczuk said they had been waiting for the plan to be finalized, but it was taking a long time. They had applied now so that once the Three Mile Lane area plan was finished they would be ready to develop.

Planning Director Richards said the City had applied for a grant to do this process in 2017 and they had been working on it since. Part of the process included master planning with the three properties owners under discussion tonight. It had taken longer than originally anticipated because they updated the transportation model. She expected the final product from the consultant to be delivered at the end of this month. From there they would be working through a public process for adoption.

Commissioner Winfield wanted to make sure the applicant agreed to follow the Three Mile Lane plan terms so they could have a cohesive gateway.

Ms. Krawczuk said there was a condition that included the design standards in the Three Mile Lane plan as they were currently envisioned and that would be informed by the work received from the consultant. Once the Three Mile Lane plan was adopted, the more stringent standards would apply. She thought the City was protected by this condition.

Planning Director Richards said if the concern was master planning collaboratively with the two adjacent property owners, she could ask legal counsel how to address it. Transportation connectivity with the surrounding properties was included in the conditions. The improvements at Cumulus Avenue and frontage road system associated with the highway would be part of the Three Mile Lane plan. If the Commission wanted to include that in the conditions, they would make sure the language was included.

Commissioner Banagay asked if all the transportation needs were being analyzed as the adjacent properties were currently situated or was it anticipating development.

Planning Director Richards explained the Three Mile Lane plan was looking at the full build out of the preferred land use alternative in the next 20 years. Since the applicant's property was adjacent to a highway facility, they needed to respond to the Transportation Planning Rule which required analysis for a Comprehensive Plan amendment or zone change that upzoned the intensity of the use to show how that upzone might impact the state's system and what mitigation would be required. At the local level, they required a traffic impact analysis with a preliminary development plan. That would look at local intersections.

Commissioner Banagay said in regard to comments about the applicant jumping the line, what would the applicant not be subject to if the application was approved before the Three Mile Lane plan was approved? Planning Director Richards thought the concern was not going through the process with the three property owners together as a whole and master planning the properties so they would serve the community moving forward.

Commissioner Banagay asked if there was no impending request and they had been working with the neighboring properties, why not wait?

Mr. Roodhouse said they had been working with the neighbors and assured them that they would be cooperative on access and road improvements. He thought they had been good neighbors. The process had already taken a long time and the market was positioned well right now to start the preliminary planning that would involve finding out what tenants really were interested in coming to McMinnville. Waiting any longer would be a mistake. Whatever the Three Mile Lane plan provided, by the time that process was done they would be ready to finalize a project and be subject to it and that would include working with the neighboring properties.

Commissioner Schanche did not see a problem with an application coming in at this stage. They were ready to follow all the rules, some of which had not been written. She was in support of moving forward.

Commissioner Rankin asked what would happen if the City had to put in the infrastructure for future development. Planning Director Richards said transportation was still being discussed. Currently the Three Mile Lane transportation model did not show a need for additional improvements at the intersection of Cumulus with the build out of 40 acres of commercial land at this site. The transportation analysis that the applicant did also did not show a need for improvements. They were still in discussion with ODOT on mitigation measures that the applicant would do. They would not be the responsibility of the City.

Commissioner Randall suggested they add a condition that a development application could not be submitted until the Three Mile Lane plan was adopted. He also did not see how this was a special exception and thought the applicant needed to show how it applied.

Commissioner Tucholsky MOVED to CONTINUE the hearing for CPA 2-20 and ZC 3-20 with the record open to July 15, 2021. The motion was seconded by Commissioner Schanche and PASSED 9-0.

The Commission took a short break.

B. Legislative Hearing: Proposed Amendments to the Comprehensive Plan to adopt: A New Housing Needs Analysis (G 1-20); A New Housing Strategy (G 2-20); and A New Economic Opportunities Analysis (G 3-20) – *(Exhibit 3)*

Requests: G 1-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Housing Needs Analysis, including a residential buildable land inventory. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to amend the analysis to address new provisions of state law, evaluate efficiency measures and update the buildable land inventory to reflect the land added to the Urban Growth Boundary in December 2020.

G 2-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Housing Strategy. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to address new provisions of state law.

G 3-20 - This is a legislative amendment, initiated by the City of McMinnville, to the Comprehensive Plan to adopt a new Economic Opportunities Analysis, including a buildable land inventory for employment and other non-residential land use. **Note:** Staff will be requesting a continuance until May 18, 2023. This will provide additional time to update the buildable land inventory to reflect the land added to the Urban Growth Boundary in December 2020.

Applicant: City of McMinnville

Disclosures: Chair Hall opened the public hearing and asked if there was any objection to the jurisdiction of the Commission to hear this matter. There was none. He asked if any Commissioner wished to make a disclosure or abstain from participating or voting on this application. There was none.

Staff Presentation: Planning Director Richards said this public hearing was for consideration of the following documents: Housing Needs Analysis and Residential Buildable Lands Inventory (June 2019 draft), Addendum 1 to June 2019 draft HNA, Housing Strategy (June 2019 draft), Economic Opportunities Analysis, Employment Buildable Lands Inventory, and Other Land Needs (February 2020 draft), and Urbanization Report (June 2020 draft). Notices went out to DLCD and the News Register for this hearing. Staff recommended continuance of the hearing to May 18, 2023. More work needed to be done to reconcile the documents with the recently adopted and approved MGMUP UGB amendment. HB 2003 had thrown a wrinkle into the City's process.

Planning Director Richards gave a history of the process. The Housing Needs Analysis was initiated in 2018 as part of preparing for an Urban Growth Boundary expansion process. They hired a consultant, established a Project Advisory Committee, established a planning horizon, and got an updated population forecast from PSU. The process was completed in June 2019. In 2020, the City made some corrections based on new data and changing conditions to the HNA in an updated addendum. There were corrections to the Buildable Lands Inventory for split-zone properties identified during the Economic Opportunities Analysis work. They reduced the capacity in the exception areas per OAR 660-024-0067(6) that were added to the UGB in 2003 but never annexed into the City for development. HB 2001 was adopted in June 2019. Capacity was assigned to high hazard landslide areas. In 2019, the City initiated the Economic Opportunities Analysis and commercial Buildable Lands Inventory to understand economic land needs and opportunities. They hired a consultant, established a Project Advisory Committee, established a planning horizon, and used the updated population forecast from PSU. In 2020, the City decided it needed to provide a user-friendly summary that the general public could understand and initiated an Urbanization Study to be done. The disrupters to all of these documents were: June 2019—Oregon state legislature adopted HB 2001 and HB 2003, both significantly impacted growth planning relative to the Housing Needs Analysis and February 2020—City Council provided direction to pursue a remand response to the 2003 MGMUP UGB submittal to try and expedite relief for land constraints and emerging affordable housing crisis. Staff was working on the final draft of this analysis in January 2020 when the City pivoted to finish the UGB remand. They were asked to finish this product and preserve it for future growth planning efforts. Staff finished the draft in June 2020 and submitted notice to DLCD for a first evidentiary hearing in May 2021. The MGMUP 2020 UGB amendment that was recently approved brought 662.40 gross buildable acres into the UGB. HB 2001 and 2003 attempted to address the housing supply by creating missing middle housing. They required cities to assume 1-3% increase in redevelopment in HNAs. They also attempted to address planning for future supply of housing through participating in a Regional Housing Needs Analysis and a mandate for a Housing Needs Analysis to be done every 8 years and Housing Production Strategies to be created.

Across Oregon, housing had emerged as a paramount concern. There was a deficit of 155,156 housing units from 2000 to 2015 to house Oregon residents. New studies showed that if they continued on the same trend, the deficit would rise to 500,000 housing units statewide. Based on a study put out by Freddie Mac in February 2020, Oregon had the highest deficit of housing in the United States (nearly 9%) followed by California (nearly 6%). To implement HB 2001, the redevelopment assumptions required were amended into the 2019 HNA and BLI with the HNA Addendum, the redevelopment assumptions required still needed to be added to the new UGB amendment, the missing middle housing code package was currently underway, and the IBTER Infrastructure Study was underway. To implement HB 2003, the Regional Housing Needs Analysis needed to be done, the Housing Production Strategy would need to be completed, and cities would update and adopt a new Housing Capacity Analysis every eight years. McMinnville had to adopt an updated Housing Capacity Analysis by December 31, 2023. The good news was they had that work done. The bad news was it showed the need for more land even with the recent MGMUP UGB remand. McMinnville needed 1,399 acres to accommodate growth through 2041. The City needed an additional 576 acres for housing, 280 acres for commercial employment, and 70 acres for industrial employment. This included the reduction of capacity on the exception lands per recent legislation and HB 2001 calculations. It did not include a true reconciliation of the UGB remand into the new BLI, HB 2001 calculations on the new UGB land, and efficiency measures. They might have to do another UGB amendment in the next two years. The Council agreed to adopt the existing draft of the HNA/EOA and BLI in 2021 but asked to participate in the sequential UGB program. Staff would work with DLCD to put together a work program that would allow for two years to do efficiency measures and two years to do a UGB amendment. This meant the process would take 5-6 years and cost $390,000.

Commission Questions: Commissioner Randall asked about the odds for success. Planning Director Richards said with the new mandate to adopt a HNA every 8 years, they would have to do the analysis every five years because it took three years to do the work and if there was need try to do another UGB amendment. The City did not have a history of getting through this process in less than 8 years. She had asked DLCD what would happen if they had a UGB submittal sitting in the court system and they were mandated to start a new process. DLCD said they hoped it would not be challenged because 1,000 Friends was at the table when this was put together. There were several cities that had not been able to get through the process in less than 15 years and they had asked the same question. However, this was the way it was set up right now.

Public Testimony:

Mark Davis, McMinnville resident, requested that they stop acting like everything would be appealed. By characterizing and acting like there would be appeals, they were creating an atmosphere where it was more likely to happen. They ultimately had to make decisions and they would not make everyone happy. He thought the Planning Commission, Council, and staff were more open to new ideas that were rejected back in the early 2000's. He would like everyone to work together and be positive going forward.

Commissioner Langenwalter MOVED to CONTINUE the hearing for G 1-20, G 2-20, and G 3-20 to May 18, 2023. The motion was seconded by Commissioner McClellan and PASSED 9-0.

C. Action Item Zoning Ordinance Text Amendments: Allowing Childcare as an Outright Permitted Use in Commercial and Industrial Zones (G 1-21) – Hearing conducted and closed at April 15, 2021,PC Meeting *(Exhibit 4)*

Request: This is a legislative amendment initiated by the City of McMinnville to remove regulatory barriers for the development of childcare centers in the city's commercial and industrial zones where development standards can be implemented that would allow for the permitted outright use of childcare centers without negative impact to adjacent properties.

Applicant: City of McMinnville

Chair Hall said this hearing was closed on April 15, but written record was kept open until April 30.

Staff Presentation: Planning Director Richards said this item included legislative code amendments to remove barriers for childcare opportunities and become compliant with state regulations. It was a legislative action initiated by the City. A public hearing was held on April 15 and the hearing was closed with the record open for written comment until April 30 per the request of DLCD. The Planning Commission also had follow-up questions for staff to come back with. Notices were published and comments were received from DLCD and the Parks and Recreation Department. The original proposed amendments would: update definitions for registered/certified child care homes and child care centers, allow registered and certified child care homes as outright permitted uses in residential zones and child care centers as conditional uses, allow child care centers as outright uses in employment zones and as conditional uses in the M-2 zone, and require a designated pick-up and drop-off zone for two vehicles for child care centers. Additional amendments per the recommendation of DLCD were: amended language to be less specific for registered and certified child care homes, allow child care centers in a City-owned park or recreation facility, a public school, or a conforming private school, and add “on-site” to the designated pick-up and drop-off zone. The Planning Commission questions were: Can cities regulate how many child care homes are allowed in attached residential dwelling units? The answer was no. Can developers or home owner associations prevent the location of child care facilities in a neighborhood through use of CC&Rs? The answer was yes, it was not expressly prohibited in the legislation regulating this industry. What is the number of children allowed per square foot of space for registered and certified child care homes and child care centers? The answer was it was nuanced. Regulations were attached to the staff report. Commissioner Langenwalter had asked why child care centers were not outright permitted uses in the C-3 zone. The answer was anything allowed in C-1 and C-2 was allowed in C-3 as well.

Based on the findings and conclusions, Commissioner Schanche MOVED to RECOMMEND APPROVAL of G 1-21 to the City Council. SECONDED by Commissioner Langenwalter. The motion PASSED 9-0.

5. Commission Comments

None

6. Staff Comments

Planning Director Richards discussed the Planning Commission’s City emails and providing electronic packets instead of printed packets for meetings.

7. Adjournment

Chair Hall adjourned the meeting at 10:30 p.m.

EXHIBIT 3 - STAFF REPORT

DATE: May 20, 2021
TO: Planning Commission Members
FROM: Heather Richards, Planning Director
SUBJECT: Public Hearing – Proposed Amendments to the Comprehensive Plan to adopt a New Housing Needs Analysis (G 1-20); a New Housing Strategy (G 2-20); and a New Economic Opportunities Analysis (G 3-20).

STRATEGIC PRIORITY & GOAL:

GROWTH & DEVELOPMENT CHARACTER
Guide growth & development strategically, responsively & responsibly to enhance our unique character.

OBJECTIVE/S: Strategically plan for short and long-term growth and development that will create enduring value for the community

---

Report in Brief:

This is a legislative public hearing to consider proposed amendments to the McMinnville Comprehensive Plan, adopting a new Housing Needs Analysis, a new Housing Strategy, and a new Economic Opportunities Analysis.

Due to the passage of some recent state legislation and resulting Department of Land Conservation and Development (DLCD) rulemaking, staff is recommending opening the public hearing and continuing it to May 18, 2023, so that the documents can be amended to reflect the impacts of HB 2001 (2019), HB 2003 (2019) and recent rules adopted by DLCD.

Background:

In 2018, the City of McMinnville initiated an effort to update its Housing Needs Analysis (HNA), Economic Opportunities Analysis (EOA) and Public Lands Analysis.

In Oregon Land Use planning cities must maintain a buildable land supply to support necessary population growth for twenty years. This is accomplished through a needs analysis process. It is a highly regulated process governed by state legislation (Oregon Revised Statutes (ORS)) and rulemaking (Oregon Administrative Rules (OAR)). If the needs analysis identifies a need for additional land supply, cities must determine how they are going to meet that need, either by increasing density within the existing urban growth boundary or by expanding the urban growth boundary, or both.

Cities typically will conduct an efficiency measures analysis to identify opportunities for growth and higher density within the city's urban growth boundary prior to expanding the urban growth boundary. If cities choose to expand their urban growth boundary, cities must then embark on a land analysis of land adjacent to the existing urban growth boundary to determine where it is appropriate to expand. Like the needs analysis, the efficiency measures analysis and urban growth boundary analysis are highly regulated with ORS and OARs.

In 2018, after realizing the negative effects of constrained land supply on the City of McMinnville's housing market and employment opportunities, the City elected to initiate the needs analysis with a mindset that it would lead eventually to an urban growth boundary amendment even after an efficiency measures analysis. City Council direct staff to plan for both a twenty-year growth horizon (2021 -2041) as well as a fifty-year growth horizon (2021 – 2067) in order to adopt a future Urban Reserve Area so that the City did not find itself in the same predicament in the future.

The last time the City had successfully adopted a Housing Needs Analysis was in 2001 and although the needs analysis and resulting efficiency measures indicated a need to expand the city's urban growth boundary for future growth, the city was not successful in adopting a new urban growth boundary that met the city's identified need due to legal challenges, eventually resulting in a Court of Appeals remand to the City in 2013.

Thus, the city engaged a consultant team and worked with a project advisory committee on a buildable lands inventory, housing needs analysis and economic opportunities analysis throughout 2018, 2019 and 2020.

At the same time, during the 2019 Oregon Legislative Session, two house bills were adopted, HB 2001 and HB 2003. Both bills impacted state legislation and eventually rulemaking relative to how cities implemented needs analyses. Knowing that the legislation and rulemaking would take some time to enact, the City put a pause on their efforts, and turned towards the 2013 urban growth boundary remand to see if that would lead to a quicker resolution to the city's land supply issues rather than a new effort. City staff worked on a response to the Court of Appeals remand in 2020 and in April, 2021 learned that the submittal had been approved by the Department of Land Conservation and Development and was not appealed.

In order to preserve their efforts from 2018, 2019 and 2020, in May 2020, the City of McMinnville submitted the following "PAPA" notices (Notice of Proposed Amendments) to DLCD:

- **HNA.** Housing Needs Analysis and Residential Buildable Land Inventory (June 2019 Draft).
- **Housing Strategy.** (June 2019 Draft).
- **EOA.** Economic Opportunities Analysis, Employment Land Buildable Land Inventory, and Other Land Needs (February 2020 Draft). The City subsequently completed additional updates to the February 2020 draft in June 2020 after the initial PAPA submittal to DCLD. The City subsequently submitted the updated draft as an amended PAPA notice in May 2021.

All of the above documents are attached to this staff report and constitute the draft proposed amendments to the McMinnville Comprehensive Plan.

In addition to the HNA, Housing Strategy and EOA, the City prepared a Memo updating the HNA (Addendum 1 to the HNA) in June 2020 to address any new discoveries since the June 2019 draft was completed, and an Urbanization Study that served as a summary of the HNA/EOA analysis. A description of which is provided below.

- **Addendum 1 to the HNA.** This addendum provides the following updates to the June 2019 Draft HNA, providing the basis for the revised residential capacity data presented in the June 2020 Draft Urbanization Report:

  - **Corrections to BLI Acreages Due to Split-Zoned Lots Identified During EOA Work.** Some properties were split-zoned residential and commercial, but had residential capacity assigned to both portions. With the EOA work, the analysis was updated, and the commercially zoned portions were assigned to employment lands as part of the employment BLI. This addendum provides the adjustments to the HNA and residential BLI to reflect the adjustments to buildable acreage and capacity for the residentially zoned portions of those properties.

  - **Capacity of Exception Areas in the UGB.**
    - **OAR 660-024-0067(6).** For exception areas added to the UGB, OAR 660-024-0067(6) provides for reduced capacity assumptions for tax lots less than two acres. This applies to lands within three exception areas that were added to the UGB: Riverside South, Redmond Hill Road, and Fox Ridge Road. This is based on research and analysis that was conducted for the "HB 2554 Report." In September 2015, The University of Oregon Community Service Center published a final report for the HB 2254 Rules Advisory Committee, "Analysis of Development on Rural Residential Lands: A Report to the HB 2254 Rules Advisory Committee." This rule is based on the results of the analysis presented in that report.

    - **Density Assumptions for Exception-Area Tax Lots >=2 Acres.** In the HNA, it was assumed Exception Areas would develop at the "average needed density" of 4.9 du/gross acre, assuming the average density could be achieved through efficiency measures. However, with the substantial amount of properties <2 acres in exception areas which are subject to the reduced capacity assumptions noted above, it may not be feasible to achieve that overall average density when considering what density increase would have to be achieved on the remaining properties within the exception areas to offset reduced capacity assumptions on the smaller parcels, especially given some location policies, including those which limit residential density in proximity to certain uses such as the sewer treatment plant.

    - **Other: Serviceability.** During the residential BLI and capacity analysis, it was assumed that all land over 275' elevation was in Water Pressure Zone 2. However, Pressure Zone 2 is an elevation band of approximately 275-415'. There are some properties and portions of properties (and potential future structures) within the UGB over 415' elevation which would be in a future Water Pressure Zone 3 and would require future Pressure Zone 3 infrastructure to serve those properties. This may be infeasible to serve during the planning horizon. The current master plan includes provisions for serving Zone 2, but didn't include service of a Water Pressure Zone 3.

  - **Analysis Under ORS 197.296 as Amended by HB 2001.** HB 2001 was signed into law after the City finished the preliminary work to produce the June 2019 Draft HNA with recommendations from the Project Advisory Committee. HB 2001 amends ORS

197.296(6) in part to specify that, when a City is expanding its UGB and/or including new measures to accommodate growth within the UGB, that it must adopt findings regarding the density expectations assumed to result from the measures adopted to implement "middle housing" provisions, as specified in the statute. This analysis provides the required analysis and findings regarding density expectations and the associated effect on capacity.

  - **Small Lot Status and Capacity.** The way lands are classified under state law, some properties which most people would intuitively consider to be "infill" or "redevelopment" properties are treated the same as "greenfield" development when making assumptions about which properties will further develop and at what densities during the 20-year planning period. Approximately 82% of the non-entitled tax lots classified as buildable land are two acres or smaller, and approximately 93% of these tax lots are three acres or smaller. Many of those properties are "partially vacant" – meaning they are already developed with homes. Historic analysis of partition and development activity shows only a small number and percentage of smaller properties being further divided each year and over the long-term. Further, these smaller properties are often unplatted properties that contain "remnant" acreage, and/or contain naturally constrained areas in a configuration that limits the land use efficiency to densities less than achieved when master planning larger greenfield sites.

  - **Capacity Assigned to Platted Entitled Lots within Landslide Constraint Area.** A previously platted subdivision included lots within a landslide constraint area. Platted lots in this subdivision can develop subject to approved geotechnical reports. Most lots in the subdivision have already developed, but approximately 19 lots were still undeveloped at the time of the June 2019 Draft HNA. Since this is within a landslide constraint area, no capacity was assigned to these lots. This amendment assigns capacity to these lots, recognizing development of these entitled and platted lots subject to approved geotechnical reports.

- **Urbanization Report.** (June 2020 Draft). This report doesn't include new analysis or information. It provides a user-friendly summary and compilation of the key information in the HNA, as updated by Addendum 1, as well as the key information in the EOA document.

As part of the PAPA notice for these documents in May 2020, the City needed to provide a specific date for a public hearing, and the City elected to select May 20, 2021 for the public hearing date to provide enough time for the HB 2001 and HB 2003 rulemaking to conclude.

<u>Discussion:</u>

Since these documents were completed and noticed to the Department of Land Conservation and Development, there have been two significant developments that have occurred which impact the outcomes of these draft documents:

- The City's successful completion of the McMinnville Growth Management and Urbanization Plan (MGMUP), which amended the existing urban growth boundary by adding 662.40 gross buildable acres to the urban growth boundary.

- HB 2003 rulemaking which mandated a calendar of when cities needed to adopt a new Housing Needs Analysis (OAR 660-008-0045). The City of McMinnville was assigned an adoption date of December 31, 2023. (Please see table below).

- New DLCD program for the development of a Housing Production Strategy to meet the mandates of HB 2003.

Housing Capacity Analysis Update Schedule for Oregon Cities with a population above 10,000 (Required by ORS 197.296)

OAR 660, Division 8 – Exhibit A

Adopted by the Land Conservation and Development Commission November 12, 2020.
Updated November 23, 2020.

Cities to adopt updated Housing Capacity Analyses (HNA) by December 31st of the listed year.

	2022	2023	2024	2025	2026	2027
1	Grants Pass	Ashland	Bend	Springfield	Eugene	Central Point
2	Newport	Beaverton	Hermiston	The Dalles	Troutdale	Corvallis
3		Forest Grove	Sandy			Cottage Grove
4		Gresham				St. Helens
5		Happy Valley				
6		Hillsboro				
7		Lake Oswego				
8		McMinnville				
9		Medford				
10		Milwaukie				
11		Portland				
12		Tigard				
13		West Linn				
14		Wilsonville				

The City is able to preserve the work that has already been done thus far to meet the HB 2003 mandate, but it must be updated to reflect the new urban growth boundary amendment (buildable land inventory) and the application of the provisions of HB 2001 to the new urban growth boundary amendment. Then if the needs analysis shows additional land need for the 2021 – 2041 planning horizon, the City will need to conduct an efficiency measures analysis, and if there is still land need remaining, embark on a new urban growth boundary amendment. The City will need to show how it will meet its identified land need when it adopts the HNA by December 31, 2023.

Currently the draft HNA and EOA show a need for additional land supply (please see table below). However, this need does not yet reflect the reconciliation of the MGMUP UGB amendment or an efficiency measures analysis.

MCMINNVILLE NEEDS 1,399 ACRES TO ACCOMMODATE GROWTH THROUGH 2041

The land needs analysis indicates the City will need an additional 576 acres for housing in the 2021 to 2041 period. The City also needs about 280 acres for commercial employment and 70 acres for industrial employment during the 2021 to 2041 period.

	SURPLUS (DEFICIT)	
LAND USE TYPE	20-YEAR (2021-2041)	46-YEAR (2021-2067)
Residential	(576)	(1,481)
Public or Institutional	(473)	(780)
Industrial	(70)	(70)
Commercial	(280)	(494)
Total	**(1,399)**	**(2,825)**

Source: ECONorthwest

The City has identified a work program to reconcile the MGMUP UGB amendment into the existing HNA and EOA drafts, by updating the buildable lands inventory and applying the provisions of HB 2001 to the MGMUP UGB lands, and then if there is still need identified to embark on an efficiency measures analysis. To conduct this work, the City will continue to work with project advisory committee and host public workshops and public open houses to ensure that there is significant public engagement and input throughout the process. The City has budgeted the time and resources to address this effort in 2021 and 2022, with a goal of completing the effort for a public hearing on May 18, 2023.

If, after the MGMUP UGB reconciliation and the efficiency measures analysis, the City still shows a need for additional land supply to accommodate needed new housing to support project population growth to 2041, the City will need to embark on a new urban growth boundary amendment.

Normally, this urban growth boundary amendment would need to be completed and adopted at the same time as the HNA by December 2023. However, given the time constraints and the City's most recent urban growth boundary amendment, staff has already met with the Department of Land Conservation and Development to negotiate the ability to enter into a sequential urban growth boundary program (OAR 660-025-0040) which would allow the City to submit the urban growth boundary amendment December 31, 2025.

<u>Attachments:</u>

- Draft McMinnville Housing Needs Analysis (June 2019)
- Addendum 1 to Housing Needs Analysis (June 2019)
- Draft McMinnville Housing Strategy
- Draft McMinnville Economic Opportunities Analysis (June 2020)
- Draft Urbanization Report (June 2020)
- HB 2001 - Enrolled (2019)
- HB 2003 – Enrolled (2019)

Fiscal Impact:

Per HB 2003 (2019), the City of McMinnville will need to update its Housing Strategy to conform with the mandates of the state legislation and the resulting program that the Department of Land Conservation and Development constructed to support the state legislation. It is anticipated that this effort will cost the City of McMinnville approximately $15,000.

Per HB 2003 (2019), the City of McMinnville needs to adopt a new Housing Needs Analysis by December, 2023, and if that Housing Needs Analysis demonstrates that the City has additional need for land supply to support new housing within the city limits over the twenty-year horizon (2021 – 2041), then the City will need to adopt measures to accommodate that need – either with efficiency measures (higher density within the city limits) or with additional land supply (urban growth boundary amendment), or both. It is anticipated that the efficiency measures evaluation will cost the City of McMinnville approximately $50,000, and if needed a new urban growth boundary amendment will cost the City of McMinnville approximately $250,000.

PROJECT COMPONENT	TIMEFRAME	COSTS
HNA/EOA/BLI – DRAFT Urbanization Study	May, 2021 First Evidentiary Hearing – Open and Continue	$162,000 FY 2019/20
Reconcile MGMUP UGB Remand with Urbanization Study	Draft December, 2021	$15,000 FY 20/21
Efficiency Measures	Adopt December, 2023	$50,000 FY 21/22
Housing Production Strategy	Adopt December, 2023	Draft Form
UGB Amendment (if needed)	Adopt June 30, 2025	$250,000 FY 23/24, 24/25

Recommendation:

Due to the amount of work that needs to occur to amend the proposed Housing Needs Analysis, Housing Strategy and Economic Opportunities Analysis to conform to new state legislation and rulemaking, staff is recommending that the public hearing be continued to May 18, 2023.

Table of Contents

1. Introduction

This report presents a housing needs analysis (HNA) for the City of McMinnville. It is intended to comply with statewide planning policies that govern planning for housing and residential development, including Goal 10 (Housing) and applicable statutes such as ORS 197.296 and OAR 660 Division 8. The methods used for this study generally follow the *Planning for Residential Growth* guidebook, published by the Oregon Transportation and Growth Management Program (1996).

Consistent with Statewide Planning Goal 10, the HNA documents McMinnville's housing needs for the 2021–2041 planning period.[1] It is more comprehensive than the State requires, looking at housing needs for a 5-, 10-, 20-, and 50-year period. The shorter-term analyses are intended to identify immediate housing needs and strategies given current land-need deficiencies, and the 50-year analysis can provide a basis for the establishment of urban reserve areas (URAs).

ECONorthwest developed this report in tandem with the development of the housing strategy, which is a separate, freestanding document, which is referenced and discussed herein.

Background

In January 1981, the City of McMinnville adopted an urban growth boundary (UGB) intended to meet the needs for the 1980–2000 planning period. The City of McMinnville last initiated a housing needs analysis in 2000 for the 2000–2020 planning period as part of a comprehensive review of its 20-year needs. It was subsequently updated to a 2003–2023 planning period.

In 2007–2008, the City submitted a UGB amendment to the Department of Land Conservation and Development (DLCD) for the inclusion of 1,188 gross acres, resulting in a total inclusion request of 890 buildable acres (of which 537 buildable acres were designated to meet identified housing needs) and the adoption of several land-use efficiency measures. This UGB amendment was subsequently appealed on a number of issues, and ultimately the court of appeals found that the City had not justified its inclusion of high-value farmland instead of rural residential "exception" areas and agricultural areas of poorer soils.

In July 2011, the court of appeals remanded the aforementioned case, approving the inclusion of 217 buildable acres of exception-only land in the UGB for residential use, thus leaving a 320-acre deficit of buildable residential land. To partially address residential land needs, the City has since approved some plan amendments and rezones from lower- to higher-density residential designations. Other than some smaller nonresidential-to-residential plan

[1] ORS 197.296(2) requires cities to "demonstrate that its comprehensive plan or regional framework plan provides sufficient buildable lands within the urban growth boundary established pursuant to statewide planning goals to accommodate estimated housing needs for 20 years. The 20-year period shall commence on the date initially scheduled for completion of the periodic or legislative review." McMinnville anticipates adopting the housing needs analysis no earlier than 2021. As a result, this report presents housing needs for the 2021 to 2041 period.

amendments and zone changes, no additional land has been added to the residential plan designation since 2007–2008, per the court of appeals' decision in 2011 that required a reduction in land.

From 1996 to 2016, when Senate Bill 1573 was passed, annexation of residentially designated land within the unincorporated UGB was subject to approval by City voters.[2] Annexations of land in McMinnville from 1996 to 2016 totaled 468.4 acres with at least 190 of those acres designated for uses other than housing.

The City has changed considerably since the time the last UGB review was initiated. From 2000 to 2017, McMinnville added nearly 7,166 residents, accounting for 34% of Yamhill County's growth over that period. In the same time, McMinnville added about 3,250 new dwelling units. McMinnville's population has grown a little older on average and has become slightly more ethnically diverse since 2000, consistent with statewide trends.

This report provides McMinnville with a factual basis to update the Housing Element of the City's comprehensive plan and zoning code. Additionally, it provides a factual basis to support future planning efforts related to housing and options for addressing unmet housing needs in McMinnville. It provides information that will inform future planning efforts, including a review of the McMinnville UGB and the establishment of urban renewal areas (URAs). It provides the City with information about the housing market in McMinnville and describes the factors that will affect future housing demand and need in McMinnville, such as changing demographics and housing preferences. This analysis will help decision makers understand whether McMinnville has enough land to accommodate growth over the next 5, 10, 20, and 50 years.

Framework for a Housing Needs Analysis

Economists view housing as a bundle of services for which people are willing to pay, including shelter, proximity to other attractions (job, shopping, recreation), amenities (type and quality of fixtures and appliances, landscaping, views), prestige, and access to public services (quality of schools). Because it is impossible to maximize all these services and simultaneously minimize costs, households must make tradeoffs. What they can get for their money is influenced both by economic forces and government policy. Moreover, different households will value what they can get differently. They will have different preferences, which in turn are a function of many factors such as income, age of household head, number of people and children in the household, number of workers and job locations, number of automobiles, and so on.

Thus, housing choices of individual households are influenced in complex ways by dozens of factors. The housing market in Yamhill County and McMinnville are the result of the individual decisions of thousands of households, (McMinnville has over 12,000 households, and Yamhill

[2] https://olis.leg.state.or.us/liz/2016R1/Measures/Overview/SB1573.

County has nearly 40,000 households). These points help to underscore the complexity of projecting what types of housing will be built in McMinnville between 2021 and 2041.

The complex nature of the housing market was demonstrated by the unprecedented boom-and-bust during the past two decades. This complexity does not eliminate the need for some type of forecast of future housing demand and need, with the resulting implications for land demand and consumption. Such forecasts are inherently uncertain. Their usefulness for public policy often derives more from the explanation of their underlying assumptions about the dynamics of markets and policies than from the specific estimates of future demand and need.

Statewide Planning Goal 10 and Related Policies

The passage of the Oregon Land Use Planning Act of 1974 (ORS Chapter 197) established the Land Conservation and Development Commission (LCDC) and the Department of Land Conservation and Development (DLCD). The Act required the Commission to develop and adopt a set of statewide planning goals. Goal 10 addresses housing in Oregon and provides guidelines for local governments to follow in developing their local comprehensive land-use plans and implementing policies.

At a minimum, local housing policies must meet the requirements of Goal 10 and the statutes and administrative rules that implement it (ORS 197.295 to 197.314, ORS 197.475 to 197.490, and OAR 600-008).[3] Goal 10 requires incorporated cities to complete an inventory of buildable residential lands and encourage the availability of adequate numbers of housing units in price and rent ranges commensurate with the financial capabilities of its households.

Goal 10 defines needed housing types as "housing types determined to meet the need shown for housing within an urban growth boundary at particular price ranges and rent levels."

ORS 197.303(1) defines "needed housing" as follows:

> As used in ORS 197.307, "needed housing" means all housing on land zoned for residential use or mixed-residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes, as those terms are defined by the US Department of Housing and Urban Development under 42 U.S.C. 1437a. Needed housing includes the following housing types:
>
> (a) Attached and detached single-family housing and multifamily housing for both owner and renter occupancy;
>
> (b) Government-assisted housing;

[3] ORS 197.296(1)-(9) only applies to cities with populations over 25,000.

(c) Mobile home or manufactured dwelling parks as provided in ORS 197.475 to 197.490;

(d) Manufactured homes on individual lots planned and zoned for single-family residential use that are in addition to lots within designated manufactured dwelling subdivisions; and

(e) Housing for farmworkers.

DLCD provides guidance on conducting a housing needs analysis in the document *Planning for Residential Growth: A Workbook for Oregon's Urban Areas*, referred to as the workbook. In addition, cities with a population of 25,000 or more (including McMinnville) are required to comply with ORS 197.296(1)–(9) and must conduct an analysis of housing need by housing type and density range to determine the number of needed dwelling units and amount of land needed for each housing type in the next 20 years (ORS 197.296(3)(b)).

Broadly, ORS 197.296(2) requires cities to demonstrate that its comprehensive plan provides sufficient buildable lands within the urban growth boundary to accommodate estimated housing needs for 20 years. Section 6 requires cities to conduct a buildable lands inventory and analyze housing needs and residential land needs. If the conclusion of that analysis is that the housing need determined pursuant is greater than the housing capacity determined, the City must either (1) amend its urban growth boundary to include sufficient buildable lands to accommodate housing needs for the next 20 years; (2) amend land-use regulations to include new measures that "demonstrably increase the likelihood that residential development will occur at densities sufficient to accommodate housing needs for the next 20 years without expansion of the urban growth boundary"; or (3) adopt a combination of (1) and (2).

In summary, McMinnville must identify needs for all of the housing types listed above as well as adopt policies that increase the likelihood that needed housing types will be developed. This housing needs analysis was developed to meet the requirements of Goal 10 and its implementing administrative rules and statutes. This report references relevant state guidance in relation to various elements of the HNA.

A Note About Housing Needs

As described above, the nature of the housing market and housing needs are complex. Provisions of statute that discuss needed mix and needed density read as if, after conducting an analysis of historical and forecast trends, the City can apply a formula to arrive at a correct determination of needed mix and density to ensure that housing needs are met for the next twenty years of population growth. But these determinations function within a fairly rigid formula that does not take into account market and choice. In effect, this would require the City to determine the needed housing type and density for each household and aggregate the results for all households to arrive at the needed mix of housing types and the average needed density for the planning period. It presumes that households fit into categories that are uniform in their housing needs, preferences, choices, and trade-offs and, therefore, the City can determine the correct aggregate housing choices. Meeting housing needs should also reflect community values and provide opportunities for a range of housing options to meet needs in the community, from affordable housing for the residents with the lowest incomes to executive housing options.

This formula further assumes that housing needs are reduced to type (single-family detached, single-family attached, and multifamily), mix, and density. It further assumes these are the sole factors, if not the most critical ones, that allow cities to meet housing need. Without explicitly stating it, these components of housing need are reduced to a proxy for affordability across income levels, while failing to account for other aspects of the housing market that may be more critical to addressing housing need and choice across the income spectrum. It is demonstrably true that density does not necessarily equate to affordability. Further, state law currently prohibits cities from directly addressing some aspects of the housing market that may be more critical to meeting housing needs, specifically ORS 197.309 (which enables inclusionary zoning but places restrictions on when it can be applied).

The required analysis also ignores the fact that some historic trends may be the result of factors that have artificially distorted the market and provision of housing supply in different ways, including past regulatory constraints that may have influenced the housing market, which become embedded in the trend analysis of housing need.

In reality, the City is zoning for housing opportunities in which households can make choices about housing that meets their needs by providing choices consistent with their preferences, and these needs and preferences may change during the planning period. This interpretation is consistent with the language of Goal 10: "Plans shall encourage the availability of adequate numbers of needed housing units at price ranges and rent levels which are commensurate with the financial capabilities of Oregon households and allow for flexibility of housing location, type and density."

Household preference will lead to housing choices, where a household may have a choice of different housing options that reflect trade-offs. For example, when it comes to affordability, there may be different housing choices that are equally affordable. A household may choose an ownership opportunity that results in slight cost burden but allows them to establish ownership and equity, rather than a rental opportunity at a lower price point that doesn't result in cost burden.

While housing type and density can be factors in housing costs, they are not determinants. Other factors can have a significant impact on housing cost and preference. These factors include:

- **Location within the region and city.** Locational factors and neighborhood amenities can dramatically affect housing cost. Locational choices relative to neighborhoods, amenities, schools, access to services, and so on can determine preferences and housing costs. In some cases, the cost per square foot in the highest-density multifamily developments in the most desirable neighborhoods can be significantly higher than larger single-family detached housing in a neighborhood a few miles away. To create equity and inclusion, the City needs to be cognizant of ensuring that neighborhoods are equitable and that housing types are equally distributed.

- **Square footage, materials, and amenities.** These factors can be significant in determining housing cost. Census data suggests that the size of both single-family units and multifamily units continue to increase.
- **Household formation.** Some people may select different options for household formation to increase housing choice opportunities. For example, some individuals or extended families may prefer to live in a larger house together and share costs and social supports, rather than living in individual units that may be more expensive, lack social supports, or both.
- **Housing subtypes.** Within the three broad categories of housing types specified in statute (single-family detached, single-family attached, and multifamily) are numerous subtypes. Some subtypes might have more in common with other housing types. For example, a cottage cluster might be comprised of single-family detached homes with smaller footprints and a higher density, where they are more comparable in density and affordability to other housing types than they are to large-lot single-family homes with significantly more square footage. In this case, it could be more appropriate to plan for opportunity/flexibility to achieve densities and affordability with different housing types, rather than to plan for a specific mix of the three specified housing types.

In short, housing needs can, and do, change over time. The statutes imply that the needed mix identified at the start of the planning period is the correct mix and must be achieved over the course of the planning period. It treats needed mix and density as determinants rather than predictive factors. If households make different housing choices than were initially expected or predicted then, per the statutes, the City has not achieved the correct mix and must adjust because the predictions may not have accurately reflected the socioeconomic and demographic characteristics or housing choices of the City's current and future residents. The law is set up to treat housing mix and density as destiny—treating them as a given to be adhered to rather than a forecast. While the population growth that provides the basis for future planning is described as a "forecast," and planning for employment land is described as "economic opportunities," planning for housing is instead described as "needed mix and density" rather than a housing forecast of opportunities for different housing types.

This suggests that the numbers in a population forecast are predictive and subject to change while the demographic and socioeconomic components inherent in that same forecast are not. It further assumes that the City can determine the complex factors that determine the right housing choice for households. A self-fulfilling planning scheme can be overly rigid and may drive households to select housing options because they are an available, rather than a preferred, choice.

The statutes appear to be more concerned with needed density and mix, identified at the beginning of the planning period as an absolute, more so than the consideration of housing preferences and affordable options commensurate with household incomes. In effect, the metrics (e.g., density and mix) for needed housing can be more concerned with urbanization goals than with housing needs (particularly affordability, since density does not necessarily equate to affordability).

The above discussion isn't intended to conflate housing need with the housing market. On the contrary, the housing needs analysis and residential lands needs analysis must address housing needs for those who lack housing, those who are at risk of losing housing, those who are not being served by the housing market, and those who have the narrowest choice of housing options commensurate with their incomes. There are many in the community who lack viable housing opportunities or choices. The market may continue to operate without responding to, or being able to respond to, housing needs for those residents, absent market interventions.

The housing needs analysis and resulting housing strategy will require creativity to meet the housing challenges that lie ahead, but they will provide pathways to opportunity. Rigid thinking about housing type, mix, and density—as well as segregated zoning—will not lead to the creative solutions that McMinnville seeks to meet housing challenges head-on while creating great neighborhoods of enduring value that provide opportunity to future generations. Further, narrow thinking about the term "needed housing," however well-intentioned, could replicate planning failures from the past. Affordability achieved through the warehousing of people doesn't provide a pathway to opportunity or upward mobility.

Needed mix and density are statutory components of a housing needs analysis that are typically conducted in advance of a housing strategy; accordingly, predetermining them will prevent the use of flexible options that provide more creative solutions. Instead, the residential land needs analysis should be based on either needed mix or density, leaving the other to be addressed through a responsive, creative strategy that avoids rigid categories and adjusts as needs are met over time.

As the City of McMinnville continues to discuss housing needs and construct a housing strategy in response, it should allow for market innovation over the planning horizon to ensure that the need is truly being met with choice option. Additionally, the City of McMinnville has recently adopted Great Neighborhood Principles to ensure that everyone in McMinnville can live in a nice neighborhood regardless of income. These principles strive for equity and inclusion in residential neighborhoods, and they will play an important role in crafting a meaningful response that will not only address the housing needs of McMinnville's future residents but provide enduring value.

Public Process

At the broadest level, the purpose of the project was to understand how much McMinnville will grow over the next 5, 10, 20, and 46 years. The project has two components: (1) technical analysis (the BLI and HNA), and (2) housing strategies (provided in a separate document). Both benefit from public input. The technical analysis requires a broad range of assumptions that influence the outcomes, and the housing strategy is a series of high-level policy choices that will affect McMinnville residents. Public engagement during the project was accomplished through the three primary avenues described below.[4]

Project Advisory Committee Meetings

The City of McMinnville and ECONorthwest solicited public input from an ad-hoc Project Advisory Committee. The Project Advisory Committee met six times[5] to discuss project assumptions, results, and implications. There was also a joint meeting of the Project Advisory Committee and City Council. The project relied on the Project Advisory Committee to:

- Review work products, advise on public involvement, and consider public input when making recommendations.
- Advise the project team on matters regarding housing needs, market conditions, and the buildable lands inventory in McMinnville.
- Work collaboratively with, and provide guidance to, the staff and consultant project team in the preparation for the McMinnville Housing Needs Analysis.
- Work collaboratively with, and provide guidance to, the staff and consultant project team in the preparation for the McMinnville Housing Strategy. Provide input on goals, strategies, and actions that address McMinnville's housing needs in a way that fits with, and enhances quality of life in, the community.

Public Open House

The City of McMinnville and ECONorthwest solicited input from the general public at a public open house held on February 5, 2019. The open house consisted of eight information stations related to the preliminary results of the housing needs analysis and the buildable lands inventory, as well as two public comment stations. As work proceeds on the evaluation of actions in the housing strategy, there will be additional public engagement.

---

[4] In addition to Project Advisory Committee meetings, public meetings, and stakeholder focus groups, the City of McMinnville also maintained a project website and social media presence.

[5] Project Advisory Committee meeting dates with the consultant team: July 17, 2018; November 14, 2018; December 18, 2018; March 7, 2019; and May 21, 2019.

Project Advisory Committee meeting dates without the consultant team: January 16, 2019 and June 13, 2019.

Stakeholder Focus Group

The City of McMinnville and ECONorthwest solicited feedback at a stakeholder focus group. The purpose of the focus group was to provide an opportunity for small-group discussion and to allow input on key issues. The purpose of the focus group, held on January 25, 2019, was to have a targeted discussion with realtors, developers, and housing providers to learn about what they see as opportunities and constraints associated with housing development in McMinnville for the next 5, 10, 20 and 50 years.

Organization of This Report

The rest of this document is organized as follows:

- **Chapter 2. Residential Buildable Lands Inventory** presents the methodology and results of McMinnville's inventory of residential land.
- **Chapter 3. Historical and Recent Development Trends** summarizes the state, regional, and local housing market trends affecting McMinnville's housing market.
- **Chapter 4. Demographic and Other Factors Affecting Residential Development in McMinnville** presents factors that affect housing need in McMinnville, focusing on the key determinants of housing need: age, income, and household composition. This chapter also describes housing affordability in McMinnville relative to the larger region.
- **Chapter 5. Housing Need in McMinnville** presents the forecast for housing growth in McMinnville, describing housing need by density ranges and income levels.
- **Chapter 6. Residential Land Sufficiency within McMinnville** estimates McMinnville's residential land sufficiency needed to accommodate expected growth over the planning period.
- **Appendix A. Residential Buildable Lands Inventory** provides details on the process and methods for conducting the analysis as well as findings.
- **Appendix B. Scenario Modeling** provides details about the impact of housing mix assumptions. ECONorthwest presented these scenarios to the Project Advisory Committee to inform their housing mix assumption recommendation.

2. Residential Buildable Lands Inventory

This chapter summarizes the residential buildable lands inventory (BLI) for the McMinnville UGB. The buildable lands inventory analysis (BLI) complies with statewide planning Goal 10, ORS 197.296(4), and OAR 660-008. A detailed discussion of methods and additional results is presented in Appendix A.

The BLI has the following main steps: (1) establish the residential land base (parcels or portion of parcels with appropriate zoning); (2) classify parcels by development status; (3) identify and deduct development constraints, including environmental and other constraints; and (4) summarize total buildable area by zone. Buildable lands are properties classified as "vacant" or "partially vacant," which have at least some development capacity after deducting constrained areas. Those will be assigned capacity for new residential development. Calculations must also be made about how much of that land will be needed for streets and other land uses expected to occur on residential lands, which will reduce the amount available for development. Assumptions are also made about the extent of infill and redevelopment that is expected to occur on other lands.

The BLI is based on data and development status of land in late 2018. Since the planning period for this analysis is 2021–2041, McMinnville used the forecast to estimate acres that will develop between 2018 and 2021, as described in this report. The City could review the BLI in 2021 to determine actual changes in buildable lands between 2018 and 2021.

Categorizing Lands

The buildable lands inventory classifies all residential (and commercial land where housing is a permitted use) into categories.

Development Status

A key step in the buildable lands analysis is to classify each tax lot into a set of mutually exclusive categories based on development status. For the purpose of this study, all residential tax lots in the UGB are classified into one of the following categories:

- *Vacant land.* Tax lots that have no structures or have buildings with very little improvement value are considered vacant. For the purpose of this inventory, lands with improvement values under $10,000 are considered vacant (not including lands that are identified as having mobile homes), unless aerial imagery or City staff determined that the tax lot is no longer vacant in the verification step.
- *Partially vacant land.* Partially vacant tax lots are those occupied by a use, but which contain enough land to be developed further. Generally, these are lots that have more

than a half-acre of buildable land after removing constraints and developed land from the total acreage.[6] This was refined through visual inspection of recent aerial photos.

- *Developed land*. Developed land is developed at densities consistent with zoning and has improvements that make it unlikely to redevelop during the analysis period. Lands not classified as vacant or partially vacant are considered developed.
- *Public or exempt land*. Except as noted below, lands in public or semipublic ownership are considered unavailable for development. This includes lands in Federal, State, County, or City ownership. Public lands were identified using the Yamhill County Assessment property tax exemption codes and ownership field. Exempt lands owned by a nonprofit housing developer which are vacant or partially vacant are considered available for development and are inventoried accordingly.

Development Constraints

Consistent with state guidance on buildable lands inventories, ECONorthwest deducted portions of residential tax lots that fall within certain constraints from the vacant and partially vacant lands (e.g., wetlands and steep slopes). We used categories consistent with OAR 660-008-0005(2):

- *Lands within floodplains and floodways*. Flood insurance rate maps from the Federal Emergency Management Agency (FEMA), as well as land in McMinnville's floodplain zone and plan designation, were used to identify lands in floodways and 100-year floodplains.
- *Land within natural resource protection areas*. The National Wetlands Inventory was used to identify areas within wetlands.
- *Land within landslide hazards*.[7] The DOGAMI SLIDO database and landslide susceptibility datasets were used to identify lands with landslide hazards. ECONorthwest included lands with high or very high susceptibility to landslides in the constrained area. The City is proposing a policy interpreting the mapped DOGAMI hazards for purposes of the BLI, which can be reviewed upon further study if necessary.
- *Land with slopes over 25%*. Lands with slopes over 25% are considered unsuitable for residential development.

---

[6] Under the safe harbor established in OAR 660-024-0050 (2)(a), the infill potential of developed residential lots of one-half acre or more may be determined by subtracting one-quarter acre (10,890 square feet) for the existing dwelling and assuming that the remainder is buildable land. Cities with populations greater than 25,000, including McMinnville, are not eligible for this safe harbor. However, other cities that ECONorthwest has worked with have successfully justified similar threshold assumptions, and the Public Advisory Committee (PAC) for this project considered this a reasonable method to address infill potential of developed residential lots in McMinnville.

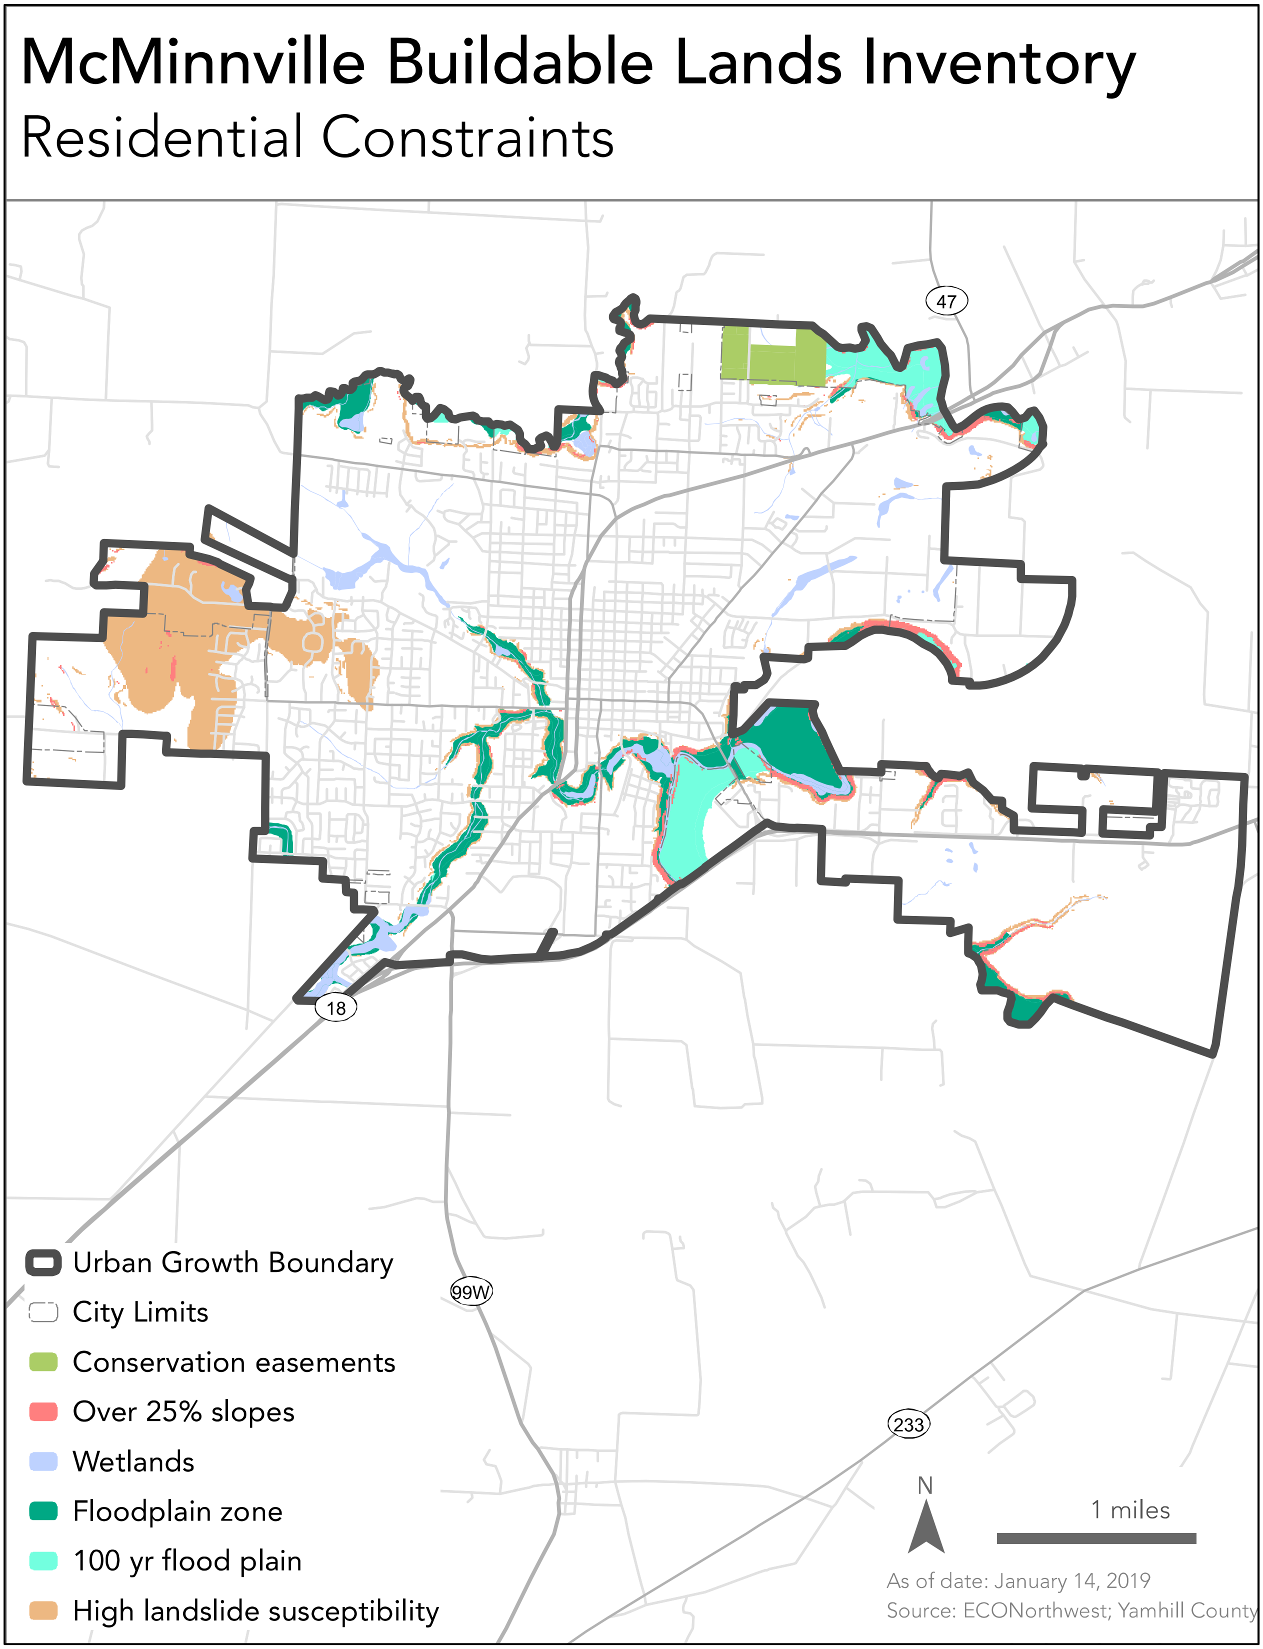
[7] The City of McMinnville will need to adopt comprehensive plan policies regarding buildable lands assumptions in areas with high and very-high landslide susceptibility. Current comprehensive plan policies addressing this hazard do not exist. Should future studies find that the City can address issues by engineering, the City could add associated acreage back into the BLI.

- *Land with conservation easements.* Lands within conservation easements, as identified by City staff, were included in the constrained area.

After deducting constraints, vacant and partially vacant lands that have remaining development capacity are classified as buildable lands.

Exhibit 1 maps the development constraints used for the residential BLI.

Exhibit 1. Residential Development Constraints, McMinnville UGB, 2018



Buildable Lands Inventory Results

Land Base

Exhibit 2 shows the residential land base in McMinnville by plan designation and zone. It also allocates the properties and acreage in the land base between Water Pressure Service Zone 2 and all other areas as described below. The land base is comprised of those properties within the UGB with a zoning or plan designation that permits residential use. This is predominantly properties with a residential plan or zoning designation. It also includes commercial plan designations and zones that also allow residential uses. The land base excludes plan and zone designations that don't allow for residential use, such as industrial zones and the floodplain zone.

The results show that the McMinnville UGB has 4,749 total acres in the residential land base in 9,854 tax lots. This analysis includes commercial zones C-3 and O-R, which allow residential uses, and excludes zones that do not allow residential uses, including industrial zones C-1, C-2, and F-P zones.[8] Of the total acres in the UGB, about 918 acres (19%) are in the R-1 single-family residential zone, about 1,326 acres (28%) are in the R-2 single-family residential zone, about 386 acres (8%) are in the R-3 two-family residential zone, and about 664 acres (14%) are in the R-4 multifamily residential zone.

ECONorthwest also identified land in the Water Pressure Service Zone 2 contour due to additional considerations for capacity. Properties in Service Zone 2 are in the UGB but will be unable to develop until a water storage tank and associated water infrastructure are built to serve properties in Service Zone 2. The Zone 2 area covers properties within three zoning or plan designations: R-1 and R-2 (within City limits), as well as the residential plan designation (within the unincorporated UGB). Exhibit 2 shows the acreage in tax lots that is either completely within or partially within Zone 2, and the remaining acreage in tax lots not in Zone 2 is defined as Zone 1.[9] Of the 4,749 acres in the land base, 272 acres (6%) are in Zone 2.

[8] The F-P zone and plan designation were included in the development constraints. Tax lots partially in the F-P zone and a residential zone were assigned to the adjacent residential zone, and the overlapping floodplain area was calculated in the constraint deductions.

[9] Some lots that fell within Zone 2 were excluded from Zone 2 acreage based on discussion with City staff. These included lots that were not subject to Zone 2 requirements, such as lots in a platted subdivision (most of those are authorized for development using private booster pumps for water pressure in the interim). Lots partially in Zone 2 were split, and acreages were calculated separately using the Intersect tool in GIS.

Development Status

Properties within the residential land base were classified into the development status categories described above (vacant, partially vacant, developed, public/exempt). The constraints shown in Exhibit 1 were then overlaid and applied to those properties.

Exhibit 3 shows all land in the residential land base by development and constraint status. Of the total residential land base, about 65% of McMinnville's total residential land (3,100 acres) is committed, 20% (928 acres) is constrained, and 15% (721 acres) is unconstrained buildable acres.

Infill and Redevelopment Potential

ORS 197.296(4) states that buildable lands must include vacant and partially vacant lands, as well as lands that may be used for infill and redevelopment. In other words, can lands that are classified as developed (not classified as vacant or partially vacant) accommodate additional development? For example, a lot developed with a single-family home may be able to accommodate an accessory dwelling unit. Infill and redevelopment reduce the amount of new residential development that must be accommodated on vacant and partially vacant land. The standard is outlined in OAR 660-008-0005(7):

> "Redevelopable Land" means land zoned for residential use on which development has already occurred but on which, due to present or expected market forces, there exists the strong likelihood that existing development will be converted to more intensive residential uses during the planning period.

The key phrase here is "there exists the <u>strong likelihood</u> that existing development will be converted to more intensive uses." The rule provides no guidance on how to operationalize the definition; the remainder of this section describes how it is addressed for this study.

While every property that is classified as vacant or partially vacant and has capacity after deducting constraints is expected to accommodate new development, the calculation is different for infill and redevelopment. The City need only identify the extent of infill and redevelopment likely to occur on lands that are already classified as developed. In other words, while some developed lots may accommodate some additional infill and redevelopment, not every property that could experience infill or redevelopment will do so during the twenty-year planning period.

The City is not required to create a map or document that identifies specific lots or parcels that may be used for infill or redevelopment like it is for vacant and partially vacant properties classified as buildable lands (ORS 197.296(4)(c)).

The Project Advisory Committee considered options for assumptions about the amount of infill and redevelopment that could reasonably be expected to occur on other residential lands that are already considered to be developed. There was general interest in using safe harbors or safe harbor methods and simplified methods when provided in applicable statutes and administrative rules. This recognizes that the safe harbor protections may not be available to the City for some methods while acknowledging that the methods and assumptions are reasonable nonetheless and are based on an analysis that was used to develop those methods and assumptions.

As a reminder, even small parcels with existing development that have been classified as partially vacant are already assumed to have capacity and are not included under the definition of infill.

It is unrealistic to assume that every property classified as developed that could experience even a small amount of infill, redevelopment, or both would do so during the planning period.

For example, if every single-family dwelling could add an accessory dwelling, it would be unreasonable to assume every property owner would add one (e.g., the strong likelihood standard). Therefore, rather than analyze properties to identify which ones would be authorized for infill and redevelopment, the analysis focused on the share of new residential units that reasonably could be expected to be accommodated on lands that are already classified as developed. For redevelopment, an optional check could include an evaluation of the extent of larger sites that have capacity to accommodate increased development and have realistic improvement-to-land-value ratios.

Assumed infill and redevelopment would need to add new units, and the demolition and replacement of one dwelling with another one would not add new residential units.

OAR 660-038 provides a simplified UBG method, which provides formulas that can be used for certain assumptions related to a UGB expansion, including sections that address residential land needs in OAR 660-038-0030. The simplified method can only be used when planning for a UGB for a shorter time period (fourteen years), which the City of McMinnville has chosen not to pursue. However, the analysis that went into developing the formulas in the simplified method provide useful guidance.

- OAR 660-038-0030(6) allows a city to account for the projected redevelopment expected to occur in residentially zoned areas and for mixed-use residential development in commercially zoned areas. For cities with a current UGB population greater than 25,000, the specified range is between 5% and 25%.
  - Five percent of the 4,657 units projected from 2021 to 2041 is 233 units (12 units/year); 25% is 1,164 units (58 units/year). The City of McMinnville has not seen significant redevelopment of existing sites for new housing in the past twenty years.
- OAR 660-038-0030(7) allows a city to account for accessory dwelling units expected to occur. For cities with a current UGB population greater than 25,000, the specified range is between 1% and 3%.
  - One percent of the 4,657 units projected from 2021 to 2041 is 47 units (2 units/year); 3% is 140 units (7 units/year). While McMinnville does not track permits for ADUs differently than for other dwellings, it is estimated that the construction of new ADUs has averaged fewer than two per year.
- These two factors account for infill and redevelopment. There are no other provisions in the simplified method addressing infill other than in the later evaluation of land in areas studied for inclusion in the UGB. Taken together, the range for infill and redevelopment is 6% to 28%
- It is reasonable to assume that some parcels classified as developed (less than one-half acre with a residence) will also have some infill capacity through partitioning rather than ADUs, based on zoning and site development configuration. Therefore, we don’t differentiate the type of infill development.

Recommendation on Infill

The Project Advisory Committee's recommended assumption for redevelopment is that 8% of new dwelling units during the planning period will be accommodated on lands classified as "developed" through infill, redevelopment, or both. (Eight percent of the 4,657 units projected from 2021 to 2041 is 373 units [19 units/year].0

Recommendation for Land Needs Before 2021

Since the planning period begins in 2021, there is an interim period during which there will be additional population growth, new housing, and consumption of buildable land. The PSU population forecast shows growth of about 1,480 people between 2018 and 2021, which would equate to about 580 households (and 580 needed occupied dwelling units), using the same household size assumption applied to the planning period. After applying vacancy rate assumptions, McMinnville is forecast to need 612 new dwelling units between 2018 and 2021 (see Exhibit 75). After applying assumptions for infill and redevelopment, McMinnville will need to accommodate 49 dwelling units through infill and redevelopment and 563 new dwelling units on vacant and partially vacant land (see Exhibit 88 and Exhibit 89).

At historic average density of 4.9 dwelling units per gross acre, it is expected that the 563 dwelling units would consume approximately 115 acres of the current buildable lands inventory before 2021. Since that interim population will have occurred prior to the beginning of the planning period (2021), that population is considered an "existing population," which does not need to be added back into forecast population that starts in the 2021 base year. Rather, the 563 dwelling units and the 115 acres, estimated between 2018-2021, are deducted from the 2018 capacity to estimate the remaining capacity in 2021 at the beginning of the planning period (see Chapter 6).

3. Historical and Recent Development Trends

Analysis of historical development trends in McMinnville provides insight into the functioning of the local housing market. Moreover, it is required by ORS 197.296(5)(a). The mix of housing types and densities, in particular, are key variables in forecasting the capacity of residential land to accommodate new housing and to forecast future land need. The specific steps are described in Task 2 of the DLCD *Planning for Residential Lands Workbook* as:

1. Determine the time period for which the data will be analyzed.
2. Identify types of housing to address (all needed housing types).
3. Evaluate permit/subdivision data to calculate the actual mix, average actual gross density, and average actual net density of all housing types.

ORS 197.296 requires the analysis of housing mix and density to include the past five years or since the most recent periodic review, whichever time period is greater.[10] The City's last periodic review ended in 1999. As a result, this HNA examines changes in McMinnville's housing market from January 2000 to December 2017 for information about housing mix and density. For other information about McMinnville's housing market, we present information for 2000 through 2017 from the US Census and ACS, as that is the most recently available data. We selected this time period both because it complies with ORS 197.296 and because it provides information about McMinnville's housing market before and after the national housing market bubble's growth and deflation, in addition to the more recent increase in housing costs.

This chapter presents information about residential development by housing type. There are multiple ways that housing types can be grouped. For example, they can be grouped by:

1. Structure type (e.g., single-family detached, single-family attached, multifamily, etc.)
2. Tenure (e.g., distinguishing unit type by owner or renter units)
3. Housing affordability (e.g., subsidized housing or units affordable at given income levels)
4. Some combination of these categories

For the purposes of this study, we grouped housing types based on (1) whether the structure is a stand-alone or is attached to another structure, and (2) the number of dwelling units in each structure. The housing types used in this analysis are consistent with needed housing types as defined in ORS 197.303:

---

[10] Specifically, ORS 197.296(5) (b) states: "A local government shall make the determination described in paragraph (a) of this subsection using a shorter time period than the time period described in paragraph (a) of this subsection if the local government finds that the shorter time period will provide more accurate and reliable data related to housing capacity and need. The shorter time period may not be less than three years."

- **Single-family detached** includes single-family detached units (including multiple single-family detached units on a single parcel), manufactured homes on lots and in mobile home parks, and accessory dwelling units.
- **Single-family attached** is all structures with a common wall where each dwelling unit occupies a separate lot, such as row houses or town houses.
- **Multifamily** is all attached structures (e.g., duplexes, triplexes, quadplexes, and structures with five or more units) other than single-family detached units, manufactured units, or single-family attached units.

In McMinnville, government-assisted housing (ORS 197.303[b]) and housing for farmworkers (ORS 197.303[e]) can be any of the housing types listed above. ORS 197.312 specifies that a city or county may not, by charter, prohibit government-assisted housing or impose additional approval standards on government-assisted housing that are not applied to similar but unassisted housing. It also contains provisions providing for equal zoning treatment of housing for a farmworker and the farmworker's immediate family.

Data Used in This Analysis

Throughout this report, we use data from multiple sources, choosing data from well-recognized and reliable data sources. State statutes do not provide direction about which data sources to use. This report uses the best available sources for housing, population, and household data, which comes from two primary Census sources:

- The **Decennial Census**, which is completed every ten years and is a survey of all households in the United States. The Decennial Census is considered the best available data for information such as demographics (e.g., number of people, age distribution, or ethnic or racial composition), household characteristics (e.g., household size and composition), and housing occupancy characteristics. As of 2010, the Decennial Census does not collect more detailed household information, such as income, housing costs, housing characteristics, and other important household information. Decennial Census data is available for 2000 and 2010.
- The **American Community Survey (ACS)**, which is completed every year and is a sample of households in the United States. From 2012 through 2016 and 2013 through 2017, the ACS sampled an average of 3.5 million households per year, or about 2.6% and 2.9% of the households in the nation, respectively. The ACS collects detailed information about households, including demographics (e.g., number of people, age distribution, ethnic or racial composition, country of origin, language spoken at home, and educational attainment), household characteristics (e.g., household size and composition), housing characteristics (e.g., type of housing unit, year unit built, or number of bedrooms), housing costs (e.g., rent, mortgage, utility, and insurance), housing value, income, and other characteristics.

This report uses data from the 2012–2016 and 2013–2017 ACS for McMinnville.[11] In general, we use data from 2012–2016, unless the data informs a housing forecast assumption, in which case we use data from 2013–2017. This chapter, as well as the following chapters, also use data from the 2000 and 2010 Decennial Census. If, for example, the report presents a finding that addresses a period from 2000 to the "2013–2017 period," then the report is describing a trend that took place from 2000 to 2017 (a 17-year analysis period).

It is worth commenting on the methods used for the American Community Survey.[12] The American Community Survey (ACS) is a national survey that uses continuous measurement methods. It uses a sample of about 3.5 million households to produce annually updated estimates for the same small areas (census tracts and block groups) formerly surveyed via the Decennial Census long-form sample. It is also important to keep in mind that all ACS data are estimates that are subject to sample variability. This variability is referred to as "sampling error" and is expressed as a band, or "margin of error" (MOE), around the estimate.

This report uses Census and ACS data because, despite the inherent methodological limits, they represent the most thorough and accurate data available to assess housing needs. We consider these limitations in making interpretations of the data and have strived not to draw conclusions beyond the quality of the data.

Trends in Housing Mix

This section provides an overview of changes in the mix of housing types, comparing McMinnville to Yamhill County and Oregon. We compare McMinnville to these larger regions to understand how McMinnville fits into the regional housing market. These trends demonstrate the types of housing developed in McMinnville historically.

This section shows the following trends in housing mix in McMinnville:

- **McMinnville's housing stock is majority single-family detached housing units.** According to 2013–2017 ACS data, 68% of McMinnville's housing stock was single-family detached, 23% was multifamily, and 9% was single-family attached (e.g., town houses).

  Based on ACS data, McMinnville has a proportionally smaller share of single-family housing compared to Yamhill County (79%) and the State (72%). This is typical, as urban areas (i.e., McMinnville) will often have a larger share of multifamily housing than more rural areas of the same jurisdiction (i.e., Yamhill County).

---

[11] ACS data is presented in five-year ranges because "they represent the characteristics of the population and housing over a specific data collection period." https://www.census.gov/content/dam/Census/programs-surveys/acs/about/ACS_Information_Guide.pdf

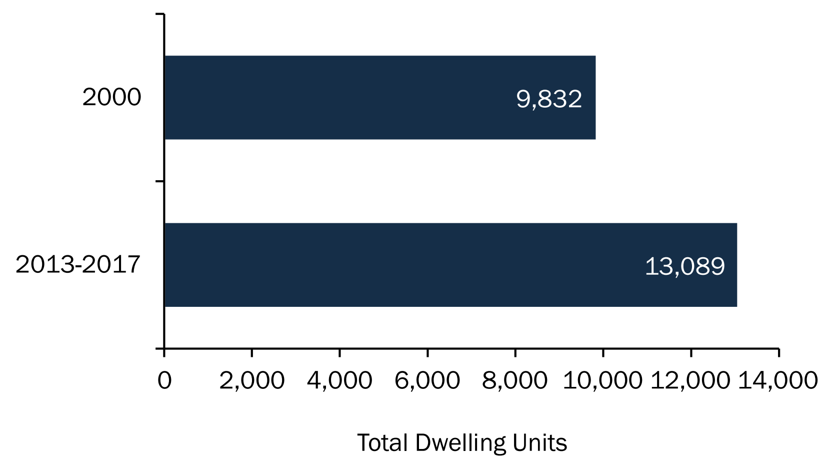
[12] A thorough description of the ACS can be found in the Census Bureau's publication "What Local Governments Need to Know." https://www.census.gov/library/publications/2009/acs/state-and-local.html

- **McMinnville's housing mix is not unlike most comparison cities.** Single-family detached housing is the dominant housing type in McMinnville and other comparison cities (Albany, Ashland, Grants Pass, Hood River, Newberg, Redmond, and Sherwood). McMinnville does, however, have a slightly higher share of single-family attached housing than many of these communities, (particularly Albany, Grants Pass, Hood River, and Redmond). McMinnville has a larger share of manufactured housing (about 12%, classified as single-family detached), compared to other comparison cities.
- **McMinnville's total housing stock grew by about 33% between 2000 and the 2013–2017 period.** McMinnville added 3,257 new dwelling units during this 17-year period.
- **According to McMinnville's permit database, single-family detached housing accounted for the majority of new housing growth between 2000 and 2017.** Sixty-two percent of new housing permitted between 2000 and 2017 was single-family detached housing.

Housing Mix

The total number of dwelling units in McMinnville increased by 3,257 units from 2000 to 2017 (33% change).

Exhibit 9. Total Dwelling Units, McMinnville, 2000 and 2013–2017
Source: US Census Bureau, 2000 Decennial Census, SF3 Table and 2013–2017 ACS Table B25024.

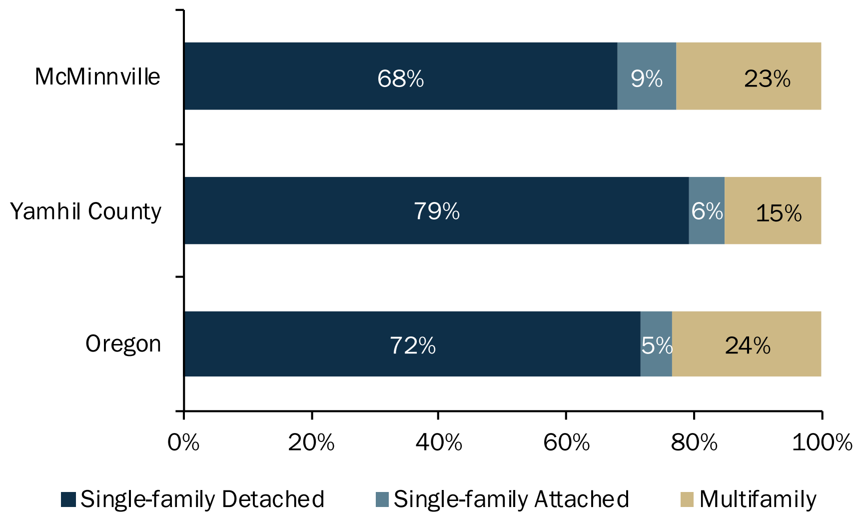


About two-thirds of McMinnville's total housing stock is single-family detached.

Typical of urban areas, McMinnville has a larger share of multifamily housing than Yamhill County, which is comprised of both urban (including McMinnville) and rural areas.

Exhibit 10. Housing Mix, 2013–2017

Source: US Census Bureau, 2013–2017 ACS Table B25024.

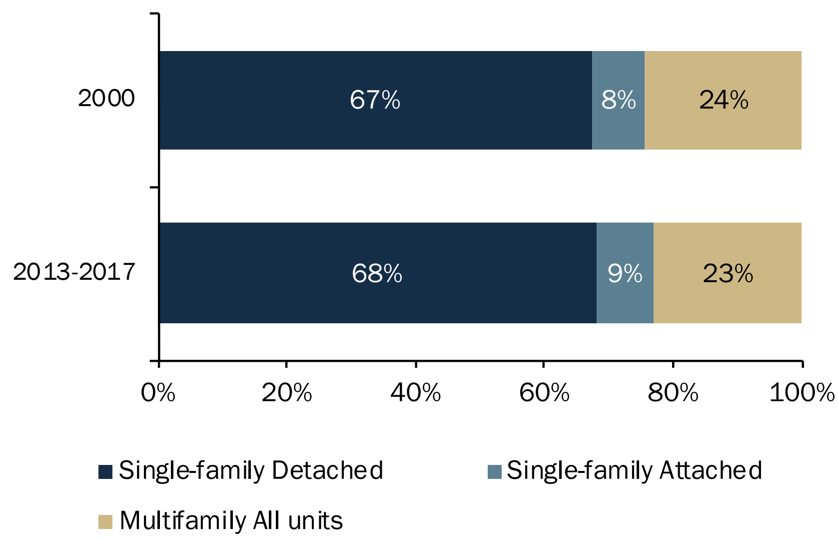


The mix of housing in McMinnville stayed relatively static from 2000 to 2017.

McMinnville had 13,089 dwelling units in 2017. About 8,902 were single-family detached, 1,180 were single-family attached, and 3,007 were multifamily.

Exhibit 11. Change in Housing Mix, McMinnville, 2000 and 2013–2017

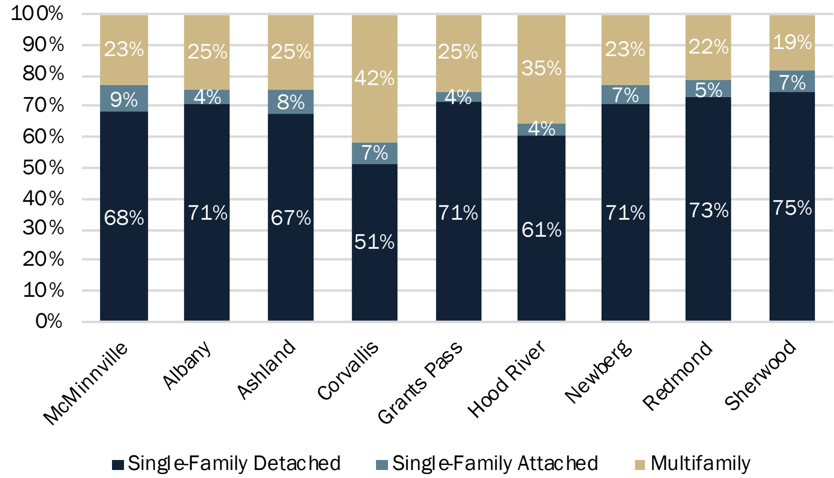
Source: US Census Bureau, 2000 Decennial Census, SF3 Table H030, and 2013–2017 ACS Table B25024.



McMinnville has a larger share of single-family attached housing than other comparison cities.

Exhibit 12. Housing Mix, McMinnville and Comparison Cities, 2013–2017

Source: US Census Bureau, 2013–2017 ACS, Table B25024. Note: Comparison cities selected by the City of McMinnville.

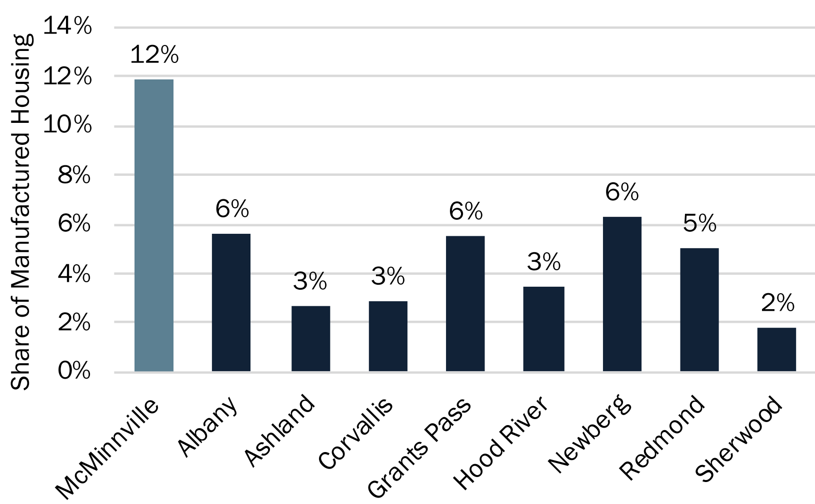


About 12% of McMinnville's housing stock is manufactured housing.

McMinnville has a larger share of manufactured housing stock than all other comparisons cities.

Exhibit 13. Manufactured Housing, Share of Total Housing Stock, McMinnville and Comparison Cities, 2013–2017

Source: US Census Bureau, 2013–2017 ACS, Table B25024. Note: Manufactured housing is a form of single-family detached housing.



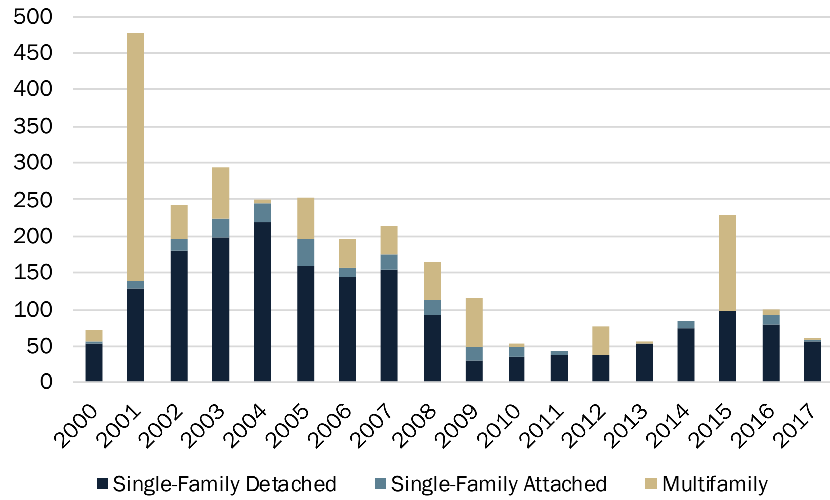
Building Permits

Over the 2000 to 2017 period, McMinnville issued permits for 3,038 dwelling units, with an average of 179 permits issued annually.

Since 2000, McMinnville issued 69% of permits for single-family dwelling units (62% single-family detached and 8% single-family attached). McMinnville issued 31% of permits for multifamily dwelling units.

Exhibit 14. Building Permits Issued for New Residential Construction by Type of Unit, McMinnville, 2000 through 2017

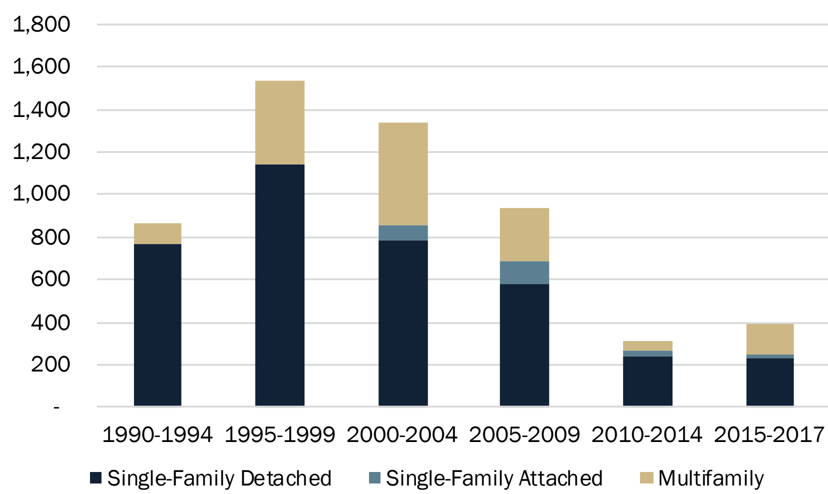
Source: City of McMinnville. Note: This chart shows a ~200 unit discrepency from ACS data presented in Exhibit 9. That said, there is a margin of error associated with ACS data.



McMinnville permitted substantially fewer units in the current decade (2010–17) than previous decades.

Exhibit 15. Share of Building Permits Issued for New Residential Construction by Type of Unit, McMinnville, 1990–1994, 1995–1999, 2000–2004, 2005–2009, 2010–2014, and 2015–2017

Source: City of McMinnville. Note: DU is dwelling unit.



Housing Density

Housing density is the density of housing by structure type, expressed in dwelling units per net or gross acre.[13] The US Census does not track residential development density, thus this study analyzes housing density based on McMinnville's permit database for development between 2000 and July 2018.

Through analysis of McMinnville's building permit data, between 2000 and July of 2018, 3,038 new dwelling units were developed in McMinnville. Of the 3,038 new units:

- **1,877** units were single-family detached (62%),
- **228** units were single-family attached (8%), and
- **933** units were multifamily (31%).

Exhibit 16 shows average net residential development by structure type for the historical analysis period (2000 to July of 2018). In this time, housing in McMinnville developed at an average density of 6.6 dwelling units per net acre. Single-family detached housing developed at an average of 4.8 units per net acre. Single-family attached housing developed at an average of 12.3 units per net acre. Multifamily housing developed at an average of 18.2 units per net acre (of which duplexes developed at an average of 7.0 units per net acre and all other multifamily units developed at 19.7 units per net acre).

Exhibit 16. Net Density by Unit Type and Zone, McMinnville, 2000 through July 2018

Total	**1,877**	**393.8**	**4.8**	**228**	**18.5**	**12.3**	**933**	**51.2**	**18.2**	**3,038**	**463.4**	**6.6**

[13] OAR 660-024-0010(6) defines net buildable acre as land that "consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads." While the administrative rule does not include a definition of a gross buildable acre, using the definition above, a gross buildable acre will include areas used for rights-of-way for streets and roads. Areas used for rights-of-way are considered unbuildable.

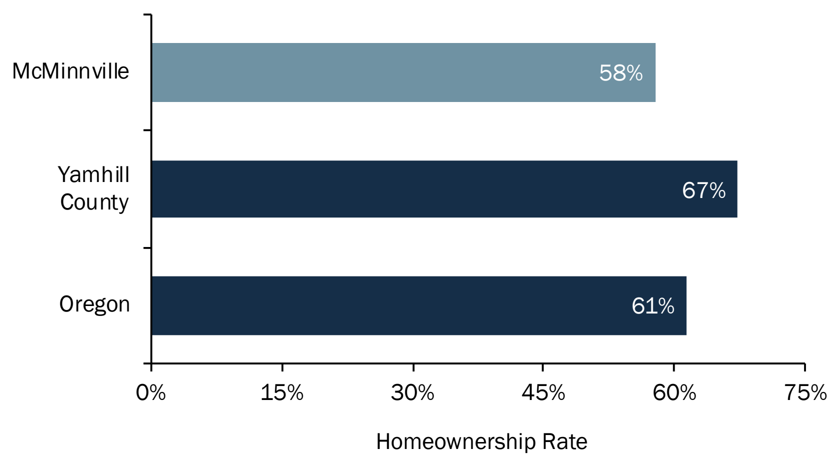
Trends in Tenure

Housing tenure describes whether a dwelling is owner- or renter-occupied. The data shows:

- **About 58% of McMinnville households were homeowners in 2012–2016.** In comparison, 67% of Yamhill County households and 61% of Oregon households were homeowners.
- **Homeownership in McMinnville stayed relatively stable between 2000 and 2012–2016.** In 2000, 60% of McMinnville households were homeowners. In 2010 and 2012–2016, 58% of households were homeowners.
- **Nearly all McMinnville homeowners (95%) lived in single-family detached housing, while many renters (58%) lived in multifamily housing.** (2012–16 ACS data)

McMinnville's homeownership rate is lower than that of the County and State.

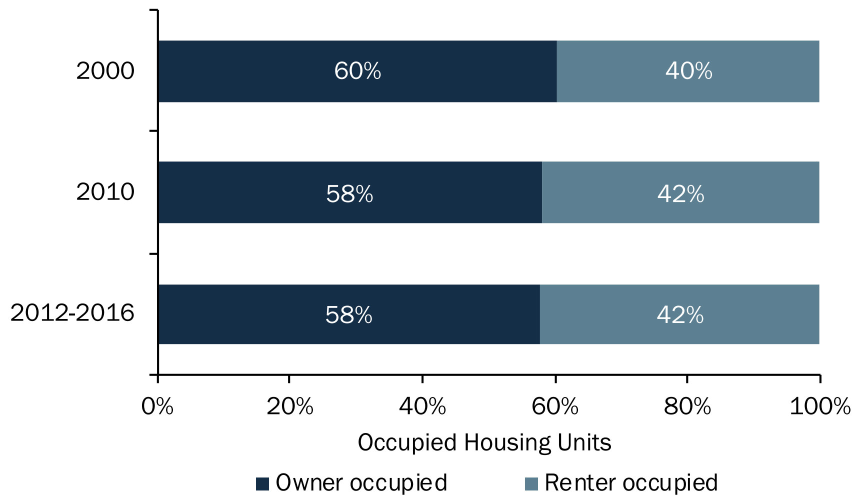
Exhibit 17. Homeownership for Occupied Units, McMinnville, Yamhill County, and Oregon 2012–2016
Source: US Census Bureau, 2012–2016 ACS Table B24003.



McMinnville's homeownership rate has remained steady since 2000 at about 60%.

Exhibit 18. Tenure, Occupied Units, McMinnville 2012–2016

Source: US Census Bureau, 2000 Decennial Census SF1 Table H004, 2010 Decennial Census SF1 Table H4, 2012–16 ACS Table B24003.



Nearly all homeowners and about a third of all renters lived in single-family detached housing.

Fifty-eight percent of McMinnville's households that rented lived in multifamily housing.

Exhibit 19. Housing Units by Type and Tenure, McMinnville, 2012–2016

Vacancy Rates

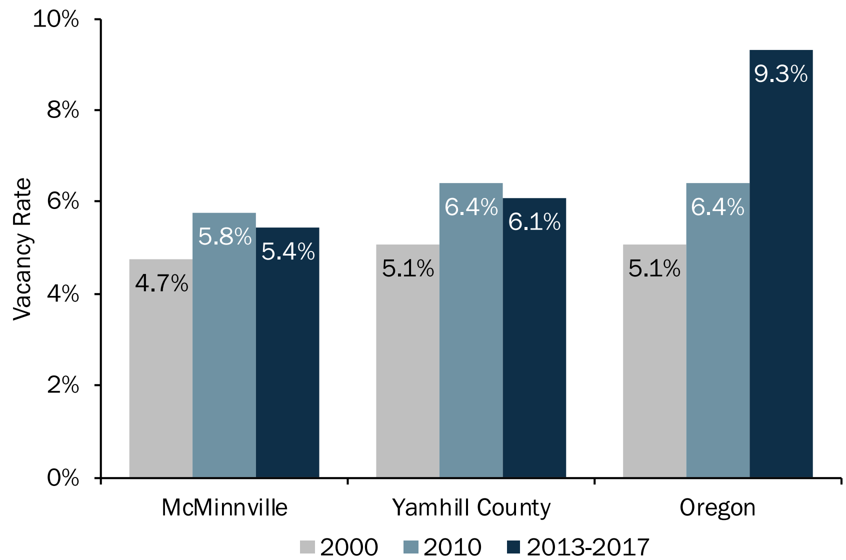
Housing vacancy is a measure of housing that is available to prospective renters and buyers. It is also a measure of unutilized housing stock. The Census defines vacancy as "unoccupied housing units . . . determined by the terms under which the unit may be occupied, e.g., for rent, for sale, or for seasonal use only." The 2010 Census identified vacancy through an enumeration, separate from (but related to) the survey of households. The Census determines vacancy status and other characteristics of vacant units by enumerators obtaining information from property owners and managers, neighbors, rental agents, and others.

The vacancy rate in McMinnville was 5.4% in 2013–2017, up from 4.7% in 2000.

As of 2017, McMinnville's vacancy rate was below that of Yamhill County (6.1%) and Oregon (9.3%).

Exhibit 21. Percent of Housing Units that are Vacant, McMinnville, Yamhill County, and Oregon, 2000, 2010, 2013–2017

Source: Census Bureau, 2000 Decennial Census SF1 Table QT-H1, 2010 Decennial Census SF1 Table QT-H1, 2013-2017 ACS Table B25002.



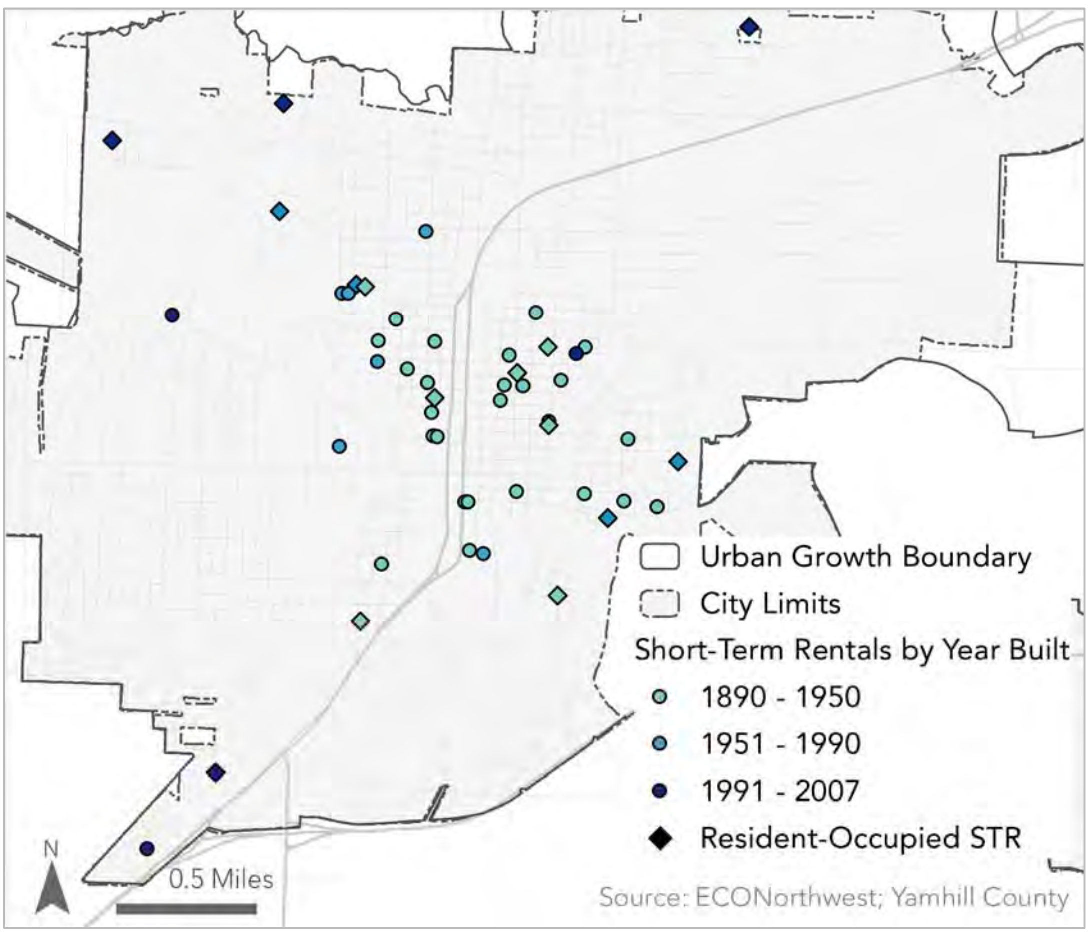
Short-Term Rentals and Seasonal Housing

McMinnville defines a short-term rental as "the use of an entire dwelling unit by any person or group of persons entitled to occupy for rent for a period of no more than 30 (thirty) consecutive days. Short term rentals include vacation home rentals approved under the regulations in effect through May 10, 2018 (Ord. 5047 §2, 2018).

McMinnville defines a resident-occupied short-term rental as "the use of no more than two guest sleeping rooms by any person or group of persons entitled to occupy for rent for a period of no more than 30 (thirty) consecutive days. The dwelling unit is occupied by a full-time resident at the time that the guest sleeping rooms within the dwelling unit are available for overnight rental. Resident occupied short-term rentals include bed-and-breakfast establishments approved under the regulations in effect through May 10, 2018 (Ord. 5047 §2, 2018).

McMinnville has about 53 short-term rentals, of which 15 rentals are occupied by a resident. Of these rentals, 60% are located in units built in 1950 or earlier, 19% in units built between 1951 and 1990, 13% in units built in 1991 or later, and 8% are unknown.

Exhibit 22. Short-Term Rentals, McMinnville, 2018 Point-in-Time
Source: City of McMinnville short-term rental database. Note: Short-term rentals include resident-occupied short-term rentals and nonresident-occupied short-term rentals.

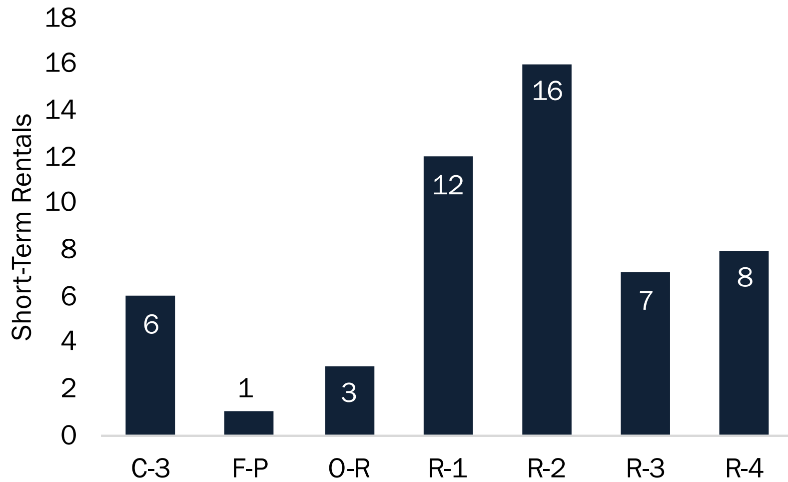


About 87% of McMinnville's short-term rentals are located in a residential zone (O-R, R-1, R-2, R-3, and R-4).

Another 11% of short-term rentals are located in a commercial zone (C-3), and the remaining 2% of short-term rentals are located in a floodplain (F-P).

Exhibit 23. Short-Term Rental by Zone Classification, McMinnville, 2018 Point-in-Time

Source: City of McMinnville short-term rental database. Note: Short-term rentals include resident-occupied short-term rentals and nonresident-occupied short-term rentals.



McMinnville has more vacant units categorized as "seasonal, recreational, or occasional use" than it did in 2000.

However, a smaller share of McMinnville's vacant units is for seasonal, recreational, or occasional use (9% in 2000, 7% in 2010, and 5% in 2016).

Government-Assisted Housing Projects

Governmental agencies and nonprofit organizations offer a range of housing assistance to low- and moderate-income households in renting or purchasing a home. There are sixteen government-assisted housing developments in McMinnville:

McMinnville has a total of 16 government-assisted housing developments, totaling 558 units.

Exhibit 25. Inventory of Government-Assisted Housing Projects, McMinnville, 2018

In addition, the Housing Authority of Yamhill County (HAYC) administers 1,423 Housing Choice Vouchers (countywide). A small share of these vouchers serves specific populations, such as homeless veterans and their families with VASH vouchers and nonelderly persons with disabilities with Mainstream Vouchers. Due to the shortage of affordable rental housing in Yamhill County, HAYC has a 58% utilization rate for persons-issued vouchers (as of December 2018).[14]

[14] When households qualify to receive a Housing Choice Voucher, they must first find housing that meets their income and housing cost requirements. Many households in McMinnville are unable to find rental housing that meets those requirements and must forego their Housing Choice Voucher, despite being eligible. Forty-two percent of Housing Choice Vouchers are currently unused for this reason.

Manufactured Homes

Cities are required to plan for manufactured homes—both on individual lots and in parks (ORS 197.475-492). Manufactured homes typically provide a source of affordable housing in cities. They provide a form of homeownership and rental units that can be made available to households making less than the median income in cities.

Generally, manufactured homes in parks are owned by the occupants who pay rent for the space on which the unit is located. Living in a manufactured housing park is desirable to some because it can provide a sense of security (with an on-site manager), community, and amenities (such as laundry and recreation facilities). Monthly housing costs are typically lower for a homeowner in a manufactured home park for several reasons. For instance, manufactured homes have lower base prices, as they cost less to produce. Due to the durability of a manufactured home, the value of a manufactured home generally does not appreciate in the way a conventional home would. Manufactured homeowners in parks are also subject to the mercy of the property owner in terms of rent rates and increases. It is generally not within the means of a manufactured homeowner to relocate to another manufactured home to escape rent increases.

ORS 197.480(4) requires cities to inventory the mobile home or manufactured dwelling parks sited in areas planned and zoned or generally used for commercial, industrial or high-density residential development. Exhibit 26 presents the Oregon Department of Housing and Community Services (OHCS) inventory of mobile and manufactured home parks within McMinnville as of 2018.

McMinnville has 12 manufactured home parks within the UGB, with a total of 1,014 spaces.

Exhibit 26. Inventory of Mobile/Manufactured Home Parks, McMinnville UGB, 2018

4. Demographic and Other Factors Affecting Residential Development in McMinnville

Demographic trends are important for developing a thorough understanding of the dynamics of the McMinnville housing market and projecting McMinnville's future housing needs. McMinnville exists in a regional economy, where trends in the region impact the local housing market. This chapter documents demographic, socioeconomic, and other trends relevant to McMinnville at the national, state, and regional levels.

Demographic trends provide a context for growth in a region; factors such as age, income, migration, and other trends show how communities have grown and how they will shape future growth. To provide context, we compare McMinnville to Yamhill County and, where appropriate, to nearby cities with comparable populations and community attributes (Monmouth, Independence, Dallas, and Newberg). Characteristics such as age and ethnicity are indicators of how the population has grown in the past and provide insight into factors that may affect future growth.

A recommended approach to conducting a housing needs analysis is described in *Planning for Residential Growth: A Workbook for Oregon's Urban Areas*, the Department of Land Conservation and Development's guidebook on local housing needs studies. As described in the workbook, the specific steps in the housing needs analysis are:

1. Project the number of new housing units needed in the next twenty years.
2. Identify relevant national, state, and local demographic and economic trends and factors that may affect the twenty-year projection of structure type mix.
3. Describe the demographic characteristics of the population and, if possible, the housing trends that relate to demand for different types of housing.
4. Determine the types of housing that are likely to be affordable to the projected households based on household income.
5. Determine the needed housing mix and density ranges for each plan designation and the average needed net density for all structure types.
6. Estimate the number of additional needed units by structure type.

This chapter presents data to address steps 2, 3, and 4. Chapter 5 presents data to address steps 1, 5, and 6.

Demographic and Socioeconomic Factors Affecting Housing Choice[15]

Analysts typically describe housing demand as the preferences for different types of housing (i.e., single-family detached, single-family attached, or multifamily), and the ability to pay for that housing (the ability to exercise those preferences in a housing market by purchasing or renting housing; in other words, income or wealth).

Many demographic and socioeconomic variables affect housing choice. However, the literature about housing markets finds that age of the householder, size of the household, and income are most strongly correlated with housing choice.

- **Age of householder** is the age of the person identified (in the Census) as the head of household. Households make different housing choices at different stages of life. This chapter discusses generational trends, such as housing preferences of seniors (particularly Baby Boomers or people born from about 1946 to 1964), and Millennials, people born from about 1980 to 2000.
- **Size of household** is the number of people living in the household. Younger and older people are more likely to live in single-person households. People in their middle years are more likely to live in multi-person households (often with children).
- **Income** is household income. Research suggests that income is the most important determinant of housing choice. Income is strongly related to the type of housing a household chooses (e.g., a single-family detached, a duplex, or a building with more than five units) and to household tenure (e.g., rent or own).

This chapter focuses on these key demographic factors, presenting data that suggests how changes to these factors may affect housing need in McMinnville over the next twenty years.

---

National Trends[16]

This brief summary on national housing trends builds on previous work by ECONorthwest, Urban Land Institute (ULI) reports, and conclusions from the *State of the Nation's Housing, 2018* report from the Joint Center for Housing Studies of Harvard University. The Harvard report summarizes the national housing outlook as follows:

> "By many metrics, the housing market is on sound footing. With the economy near full employment, household incomes are increasing and boosting housing demand. On the supply side, a decade of historically low single-family construction has left room for expansion of this important sector of the economy. Although multifamily construction appears to be slowing, vacancy rates are still low enough to support additional rentals. In fact, to the extent that growth in supply outpaces demand, a slowdown in rent growth should help to ease affordability concerns."

However, challenges to a strong domestic housing market remain. High mortgage rates make housing unaffordable for many Americans, especially younger Americans. In addition to rising housing costs, wages have also failed to keep pace, worsening affordability pressures. Single-family and multifamily housing supplies remain tight, which compound affordability issues. The *State of the Nation's Housing, 2018* report emphasizes the importance of government assistance and intervention to keep housing affordable moving forward. Several challenges and trends shaping the national housing market are summarized below:

- **Moderate new construction and tight housing supply, particularly for affordable housing.** New construction experienced its eighth year of gains in 2017 with 1.2 million units added to the national stock. Estimates for multifamily starts range between 350,000 to 400,000 (2017). The supply of for-sale homes in 2017 averaged 3.9 months below what is considered balanced (six months), and lower-cost homes are considered especially scarce. The *State of the Nation's Housing, 2018* report cites lack of skilled labor, higher building costs, scarce developable land, and the cost of local zoning and regulation as impediments to new construction.
- **Demand shift from renting to owning.** After years of decline, the national homeownership rate increased from a fifty-year low of 62.9% in the second quarter of 2016 to 63.7% in the second quarter of 2017. Trends suggest homeownership among householders aged 65 and older have remained strong and homeownership rates among young adults have begun stabilizing after years of decline.
- **Housing affordability.** In 2016, almost one-third of American households spent more than 30% of their income on housing. This figure is down from the prior year, bolstered by a considerable drop in the owner share of cost-burdened households. Low-income households face an especially dire hurdle to afford housing. As resources become increasingly competitive, and with such a large share of households exceeding the

[16] These trends are based on information from (1) the *State of the Nation's Housing, 2018* report from the Joint Center for Housing Studies of Harvard University, (2) the Urban Land Institute's "2018 Emerging Trends in Real Estate," and (3) the US Census.

traditional standards for affordability, policymakers are focusing efforts on the severely cost burdened. Among those earning less than $15,000, more than 70% of households paid more than half of their income on housing.

- **Long-term growth and housing demand.** The Joint Center for Housing Studies forecasts that demand for new homes nationally could total as many as 12 million units between 2017 and 2027. Much of the demand will come from Baby Boomers, Millennials,[17] and immigrants. The Urban Land Institute cites the trouble of overbuilding in the luxury sector while demand is in mid-priced single-family houses affordable to a larger buyer pool.

- **Growth in rehabilitation market.** [18] Aging housing stock and poor housing conditions are growing concerns for jurisdictions across the United States. With almost 80% of the nation's housing stock at least 20 years old (40% at least 50 years old), Americans are spending in excess of $400 billion per year on residential renovations and repairs. As housing rehabilitation becomes the go-to solution to address housing conditions, the home remodeling market has grown more than 50% since the recession ended—generating 2.2% of national economic activity (in 2017).

  Despite trends suggesting growth in the rehabilitation market, rising construction costs and complex regulatory requirements pose barriers to rehabilitation. Lower-income households or households on fixed-incomes may defer maintenance for years due to limited financial means, escalating rehabilitation costs. At a certain point, the cost of improvements may outweigh the value of the structure, which may necessitate new responses such as demolition or redevelopment.

- **Changes in housing preference.** Housing preference will be affected by changes in demographics; most notably, the aging of Baby Boomers, housing demand from Millennials, and growth of immigrants.

  - *Baby Boomers.* The housing market will be affected by the continued aging of Baby Boomers, the oldest of whom were in their seventies in 2018 and the youngest of whom were in their fifties in 2018. Baby Boomers' housing choices will affect housing preference and homeownership. Addressing housing needs for those moving through their sixties, seventies, eighties, and beyond will require a range of housing opportunities. For example, "the 82-to-86-year-old cohort dominates the assisted living and more intensive care sector" while new or near-retirees may prefer aging in place or active, age-targeted communities.[19] Characteristics like

---

[17] According to the Pew Research Center, Millennials were born between the years of 1981 to 1996 (inclusive). Read more about generations and their definitions here: http://www.pewresearch.org/fact-tank/2018/03/01/defining-generations-where-millennials-end-and-post-millennials-begin/.

To generalize, and because there is no official Millennial generation, we define this cohort as individuals born between 1980 and 2000.

[18] These findings are copied from the Joint Center for Housing Studies of Harvard University's "Improving America's Housing, 2019."
https://www.jchs.harvard.edu/sites/default/files/Harvard_JCHS_Improving_Americas_Housing_2019.pdf

[19] Urban Land Institute, "Emerging Trends in Real Estate, 2019."

immigration and ethnicity play a role too, as "older Asians and Hispanics are more likely than whites or blacks to live in multigenerational households."[20] Senior households earning different incomes may make distinctive housing choices. For instance, low-income seniors may not have the financial resources to live out their years in a nursing home and may instead choose to downsize to smaller, more affordable units. Seniors living in close proximity to relatives may also choose to live in multigenerational households.

- Research shows that "older people in western countries prefer to live in their own familiar environment as long as possible," but aging in place does not only mean growing old in their own homes.[21] A broader definition exists, which explains that aging in place also means "remaining in the current community and living in the residence of one's choice."[22] Therefore, some Baby Boomers are likely to stay in their home as long as they are able, and some will prefer to move into other housing, such as multifamily housing or age-restricted housing developments, before they move into to a dependent-living facility or into a familial home. Moreover, "the aging of the U.S. population, [including] the continued growth in the percentage of single-person households, and the demand for a wider range of housing choices in communities across the country is fueling interest in new forms of residential development, including tiny houses."[23]

- *Millennials.* Over the last several decades, young adults have been increasingly living in multigenerational housing—more so than older demographics.[24] Despite this trend, as Millennials age over the next twenty years, they will be forming households and families. In 2018, the oldest Millennials were in their late thirties and the youngest were in their late teens. By 2040, Millennials will be between 40 and 60 years old.

  Millennials only started forming their own households at the beginning of the 2007–2009 recession. Today, Millennials are driving much of the growth in new households, albeit at slower rates than previous generations. From 2012 to 2017, Millennials formed an average of 2.1 million net new households each year. Twenty-six percent of Millennials aged 25 to 34 lived with their parents (or other relatives) in 2017.

  Millennials' average wealth may remain far below Baby Boomers and Gen Xers, and student loan debt will continue to hinder consumer behavior and affect retirement savings. As of 2015, Millennials comprised 28% of active homebuyers,

[22] Ibid.

[23] American Planning Association, "Making Space for Tiny Houses," Quick Notes.

[24] According to the Pew Research Center, in 1980, just 11% of adults aged 25 to 34 lived in a multigenerational family household, and by 2008, 20% did (82% change). Comparatively, 17% of adults aged 65 and older lived in a multigenerational family household in 1980, and by 2008, 20% did (18% change).

while Gen Xers comprised 32% and Baby Boomers 31%.[25] That said, "over the next 15 years, nearly $24 trillion will be transferred in bequests," presenting new opportunities for Millennials (as well as Gen Xers).

- *Immigrants.* Research on foreign-born populations shows that immigrants, more than native-born populations, prefer to live in multigenerational housing. Still, immigration and increased homeownership among minorities could also play a key role in accelerating household growth over the next ten years. Current population survey estimates indicate that the number of foreign-born households rose by nearly 400,000 annually between 2001 and 2007, and they accounted for nearly 30% of overall household growth. Beginning in 2008, the influx of immigrants was staunched by the effects of the Great Recession. After a period of decline, however, the foreign born are again contributing to household growth. The Census Bureau's estimates of net immigration in 2017–2018 indicate that 1.2 million immigrants moved to the United States from abroad, down from 1.3 million immigrants in 2016–2017 but higher than the average annual pace of 850,000 during the period of 2009–2011. However, if recent federal policies about immigration are successful, growth in undocumented and documented immigration could slow household growth in the coming years.
- *Diversity.* The growing diversity of American households will have a large impact on domestic housing markets. Over the coming decade, minorities will make up a larger share of young households and constitute an important source of demand for both rental housing and small homes. The growing gap in homeownership rates between whites and blacks, as well as the larger share of minority households that are cost burdened, warrants consideration. Since 1994, the difference in homeownership rates between whites and blacks has risen by 1.9 percentage points to 29.2% in 2017. Alternatively, the gap between white and Hispanic homeownership rates, and white and Asian homeownership rates, both decreased during this period but remained sizable at 26.1 and 16.5 percentage points, respectively. Although homeownership rates are increasing for some minorities, large shares of minority households are more likely to live in high-cost metro areas. This, combined with lower incomes than white households, leads to higher rates of cost burden for minorities—47% for blacks, 44% for Hispanics, 37% for Asians/others, and 28% for whites in 2015.

- Changes in housing characteristics. The US Census Bureau's *Characteristics of New Housing* report (2017) presents data that show trends in the characteristics of new housing for the nation, state, and local areas. Several long-term trends in the characteristics of housing are evident from the *New Housing* report:[26]

[25] V. Srinivas and U. Goradia, "The Future of Wealth in the United States," Deloitte Insights, 2015. https://www2.deloitte.com/insights/us/en/industry/investment-management/us-generational-wealth-trends.html

[26] US Census Bureau, "Highlights of Annual 2017 Characteristics of New Housing." https://www.census.gov/construction/chars/highlights.html.

- *Larger single-family units on smaller lots*. Between 1999 and 2017, the median size of new single-family dwellings increased by 20% nationally from 2,028 sq. ft. to 2,426 sq. ft., and between 1999 and 2017, the western region increased by 20% from 2,001 sq. ft. to 2,398 sq. ft. Moreover, between 1999 and 2017 the percentage of new units smaller than 1,400 sq. ft. across the United States decreased by more than half, from 15% to 6%; the percentage of units greater than 3,000 sq. ft. increased from 17% to 25%; and the percentage of lots less than 7,000 sq. ft. increased from 25% to 31%. In addition to larger homes, a trend toward smaller lot sizes is seen nationally.
- *Larger multifamily units*. Between 1999 and 2017, the median size of new multifamily dwelling units increased by 5.3% across the United States, and the western region increased by 2.4%. Nationally, the percentage of new multifamily units with more than 1,200 sq. ft. increased from 28% to 33% between 1999 and 2017, and it increased from 25% to 28% in the western region.
- *Household amenities*. Across the United States since 2013, an increasing number of new units have had air-conditioning (fluctuating year by year at over 90% for both new single-family and multifamily units). In 2000, 93% of new single-family houses had two or more bathrooms, compared to 97% in 2017. In that same time, the share of units with two or more bathrooms decreased from 55% of new multifamily units to 45%. As of 2017, 65% of new single-family houses in the United States had one or more garages (down from 69% in 2000).
- *Shared amenities*. Housing with shared amenities is growing in popularity, as it may improve space efficiencies and reduce per-unit costs/maintenance costs. Single-room occupancies (SROs), [27] cottage clusters, cohousing developments, and multifamily products are common housing types that take advantage of this trend. Shared amenities may take many forms and include bathrooms, kitchens and other home appliances (e.g., laundry facilities, outdoor grills), security systems, outdoor areas (e.g., green space, pathways, gardens, rooftop lounges), fitness rooms, swimming pools, and tennis courts.[28]

State Trends

Oregon's 2016–2020 Consolidated Plan Amendment includes a detailed housing needs analysis as well as strategies for addressing housing needs statewide. The plan concludes that "a growing gap between the number of Oregonians who need affordable housing and the availability of affordable homes has given rise to destabilizing rent increases, an alarming number of evictions

[27] Single-room occupancies are residential properties with multiple single-room dwelling units occupied by a single individual. From: US Department of Housing and Urban Development, *Understanding SRO*, 2001. https://www.hudexchange.info/resources/documents/Understanding-SRO.pdf

A. Saiz and A. Salazar, *Real Trends: The Future of Real Estate in the United States*, Center for Real Estate, Urban Economics Lab, n.d.

of low- and fixed- income people, increasing homelessness, and serious housing instability throughout Oregon."

It identified the following issues that describe housing need statewide:[29]

- For housing to be considered affordable, a household should pay up to one-third of their income toward rent, leaving money left over for food, utilities, transportation, medicine, and other basic necessities. Today, half of Oregon renter households pay more than one-third of their income toward rent, and one-third pay more than half of their income toward rent.
- More school children are experiencing housing instability and homelessness. The rate of K–12 homeless children increased by 12% from the 2013–2014 school year to the 2014–2015 school year.
- Oregon has 28,500 rental units that are affordable and available to renters with extremely low incomes. There are about 131,000 households that need those apartments, leaving a gap of 102,500 units.
- Housing instability is fueled by an unsteady, low-opportunity employment market. Over 400,000 Oregonians are employed in low-wage work. Low-wage work is a growing share of Oregon's economy. When wages are set far below the cost needed to raise a family, the demand for public services grows to record heights.
- Women are more likely than men to end up in low-wage jobs. Low wages, irregular hours, and part-time work compound issues.
- People of color historically constitute a disproportionate share of the low-wage work force. About 45% of Latinos, and 50% of African Americans, are employed in low-wage industries.
- The majority of low-wage workers are adults over the age of twenty, many of whom have earned a college degree or some level of higher education.
- In 2019, minimum wage in Oregon[30] was $11.25, $12.50 in the Portland Metro, and $11.00 for nonurban counties.

"Breaking New Ground, Oregon's Statewide Housing Plan" for 2018 describes the Oregon Housing and Community Services (OHCS) goals and implementation strategies for achieving the goals.[31] It includes relevant data to help illustrate the rationale for each priority. Oregon's

[30] The 2016 Oregon Legislature, Senate Bill 1532, established a series of annual minimum wage rate increases beginning July 1, 2016, through July 1, 2022. https://www.oregon.gov/boli/whd/omw/pages/minimum-wage-rate-summary.aspx

[31] Priorities and factoids are copied directly from Oregon Housing and Community Services "Breaking New Ground, Oregon's Statewide Housing Plan," November 2018 Draft. https://www.oregon.gov/ohcs/DO/shp/OregonStatewideHousingPlan-PublicReviewDraft-Web.pdf

"Statewide Housing Plan" identified six housing priorities to address in communities across the State over 2019 to 2023.

- **Equity and Racial Justice.** *Advance equity and racial justice by identifying and addressing institutional and systemic barriers that have created and perpetuated patterns of disparity in housing and economic prosperity.*
  - Summary of the Issue: In Oregon, 26% of people of color live below the poverty line in Oregon, compared to 15% of the white population.
  - 2019–2023 Goal: Communities of color will experience increased access to OHCS resources and achieve greater parity in housing stability, self-sufficiency, and homeownership. OHCS will collaborate with its partners and stakeholders to create a shared understanding of racial equity and overcome systemic injustices faced by communities of color in housing discrimination, access to housing, and economic prosperity.
- **Homelessness.** *Build a coordinated and concerted statewide effort to prevent and end homelessness, with a focus on ending unsheltered homelessness of Oregon's children and veterans.*
  - Summary of the Issue: According to the Point-in-Time count, approximately 14,000 Oregonians experienced homelessness in 2017, an increase of nearly 6% since 2015. Oregon's unsheltered population increased faster than the sheltered population, and the State's rate of unsheltered homelessness is the third highest in the nation at 57%. The State's rate of unsheltered homelessness among people in families with children is the second highest in the nation at 52%.
  - 2019–2023 Goal: OHCS will drive toward impactful homelessness interventions by increasing the percentage of people who are able to retain permanent housing for at least six months after receiving homeless services to at least 85 percent. OHCS will also collaborate with partners to end veterans' homelessness in Oregon and build a system in which every child has a safe and stable place to call home.
- **Permanent Supportive Housing.** *Invest in permanent supportive housing, a proven strategy to reduce chronic homelessness and reduce barriers to housing stability.*
  - Summary of the Issue: Oregon needs about 12,388 units of permanent supportive housing to serve individuals and families with a range of needs and challenges.
  - 2019–2023 Goal: OHCS will increase our commitment to permanent supportive housing by funding the creation of 1,000 or more additional permanent supportive-housing units to improve the future long-term housing stability for vulnerable Oregonians.
- **Affordable Rental Housing.** *Work to close the affordable rental-housing gap and reduce housing cost burden for low-income Oregonians.*

- Summary of the Issue: Statewide, over 85,000 new units are needed to house those households earning below 30% of median family income (MFI) in units affordable to them. The gap is even larger when accounting for the more than 16,000 units affordable at 30% of MFI, which are occupied by households at other income levels.
- 2019–2023 Goal: OHCS will triple the existing pipeline of affordable rental housing—up to 25,000 homes in the development pipeline by 2023. Residents of affordable rental housing funded by OHCS will have reduced cost burden and more opportunities for prosperity and self-sufficiency.

- **Homeownership.** *Provide more low- and moderate-income Oregonians with the tools to successfully achieve and maintain homeownership, particularly in communities of color.*
  - Summary of the Issue: In Oregon, homeownership rates for all categories of people of color are lower than for white Oregonians. For white non-Hispanic Oregonians, the homeownership rate is 63%. For Hispanic and nonwhite Oregonians, it is 42%. For many, homeownership rates have fallen between 2005 and 2016.
  - 2019–2023 Goal: OHCS will assist at least 6,500 households in becoming successful homeowners through mortgage lending products while sustaining efforts to help existing homeowners retain their homes. OHCS will increase the number of homebuyers of color in our homeownership programs by 50% as part of a concerted effort to bridge the homeownership gap for communities of color while building pathways to prosperity.
- **Rural Communities.** *Change the way OHCS does business in small towns and rural communities to be responsive to the unique housing and service needs and unlock the opportunities for housing development.*
  - Summary of the Issue: While housing costs may be lower in rural areas, incomes are lower as well: median family income is $42,750 for rural counties versus $54,420 for urban counties. Additionally, the median home values in rural Oregon are 30% higher than in the rural United States, and median rents are 16% higher.
  - 2019–2023 Goal: OHCS will collaborate with small towns and rural communities to increase the supply of affordable and market-rate housing. As a result of tailored services, partnerships among housing and service providers, private industry, and local governments will flourish, leading to improved capacity, leveraging of resources, and a doubling of the housing development pipeline.

Regional and Local Demographic Trends that May Affect Housing Need in McMinnville

Demographic trends that might affect the key assumptions used in the baseline analysis of housing need are (1) the aging population, (2) changes in household size and composition, and (3) increases in diversity.

An individual's housing needs change throughout their life, with changes in income, family composition, and age. The types of housing needed by a 20-year-old college student differ from the needs of a 40-year-old parent with children, or an 80-year-old single adult. As McMinnville's population ages, different types of housing will be needed to accommodate older residents. The housing characteristics by age data below reveal this cycle in action in McMinnville.

Housing needs and preferences change in predictable ways over time, with changes in marital status and size of family.

Families of different sizes need different types of housing.

Exhibit 27. Effect of Demographic Changes on Housing Need

Growing Population

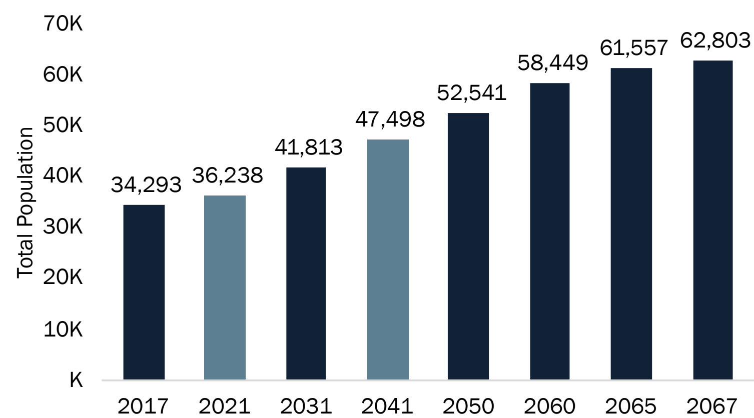
McMinnville's population grew by 88% between 1990 and 2017, adding 15,771 new residents. Over this period, McMinnville's population grew at an average annual growth rate of 2.4%. McMinnville's population growth will drive future demand for housing over the planning period.

Exhibit 28. Population, McMinnville, 1990–2017
Source: US Decennial Census 1990, 2000, and 2010. Portland State University Population Research Center, 2017 Estimate.

					Change 1990 to 2017		
	1990	2000	2010	2017	Number	Percent	AAGR
U.S.	248,709,873	281,421,906	308,745,538	325,719,178	77,009,305	31%	1.0%
Oregon	2,842,321	3,421,399	3,831,074	4,141,100	1,298,779	46%	1.4%
Yamhill County	65,551	84,992	99,193	106,300	40,749	62%	1.8%
McMinnville	17,894	26,499	32,187	33,665	15,771	88%	2.4%

By 2067, McMinnville's population within its UGB is expected to exceed 60,000 people.

Exhibit 29. Population Forecast, McMinnville UGB, 2017 through 2067
Source: Population Research Center, Portland State University, June 30, 2017.



McMinnville's population within its UGB is expected to grow by around 31% (11,260 people) over the 20-year analysis period (2021 to 2041).

Exhibit 30. McMinnville's 5-, 10-, 20-, and 46-Year Population Forecast, McMinnville UGB, 2021, 2026, 2031, and 2067

36,238	38,985	41,813	47,498	62,803
2021	2026 (5-year)	2031 (10-year)	2041 (20-year)	2067 (46-year)

A majority of new population growth in Yamhill County and Oregon is because of in-migration.

Exhibit 31. Migrant Share of New Population, Yamhill County and Oregon, 2000–2016
Source: Population Research Center, Portland State University.

Yamhill County	19,998 New Population	13,477 New Migrant Population	67% Migrant Share of Growth
Oregon	654,951 New Population	420,150 New Migrant Population	64% Migrant Share of Growth

Aging Population

This section describes two key characteristics of McMinnville's population (seniors and young adults, including Millennials), with implications for future housing demand in McMinnville:

- **Seniors.** McMinnville and Yamhill County populations are progressively getting older. As McMinnville's elderly population grows, it will increase demand for housing that is suitable for elderly residents. By 2040, residents aged 60 years and older will account for 28% of McMinnville's population, compared to 20% in 2010.

  The impact of growth in seniors in McMinnville will depend, in part, on whether older people already living in McMinnville continue to live in their current residence as they age. National surveys show that most households prefer to age in place by continuing to live in their current home and community as long as possible.[32]

  Growth in the number of seniors will result in demand for housing types specific to seniors, such as small and easy-to-maintain dwellings, assisted-living facilities, or age-restricted developments. Senior households will make a variety of housing choices, including remaining in their homes as long as they are able, downsizing to smaller single-family homes (detached and attached) or multifamily units, or moving into group housing (such as assisted-living facilities or nursing homes) as their health declines. The challenges aging seniors face in continuing to live in their community include changes in healthcare needs, loss of mobility, the difficulty of home maintenance, financial concerns, and increases in property taxes.[33]

- **McMinnville has a larger proportion of younger people than the County and State.** About 30% of McMinnville's population is under 20 years old, compared to 28% of Yamhill County's population and 25% of the State's population. The forecast for population growth in McMinnville shows the number of people under 20 years will increase, but the share of younger people will decline marginally from 29% of the population in 2017 to 27% of the population by 2040.

  Linfield College offers a partial explanation for McMinnville's age structure. Data provided by the college indicated that Linfield had 2,588 students enrolled as of May 2018.[34] Approximately 1,240 students (48% of the 2,588 students) were at the McMinnville campus as of February 2019.[35] As of 2016, the 1,240 students make up approximately 4% of the City's total population, about 13% of the City's population under age 20, and about 23% of the City's population between the ages of 15 and 24. Linfield students are counted in PSU's population forecast. Linfield requires students to live in campus housing for their first two years.

---

[32] A survey conducted by AARP indicates that 90% of people 50 years and older want to stay in their current home and community as they age. See http://www.aarp.org/research.

[33] M. S. Ball, *Aging in Place: A Toolkit for Local Governments*.

[34] https://www.linfield.edu/about/facts-and-figures.html

[35] https://www.opb.org/news/article/linfield-college-tenured-faculty-cut/

People who are currently between 18 and 38 years old[36] are referred to as the Millennial generation and account for the largest share of the population in Oregon.[37] By 2041, Millennials will be about 41 to 61 years of age. The forecast for Yamhill County shows growth in the number of Millennials from about 27,500 people in 2021 to 35,000 people in 2041 (about 28% change). The share of Millennials from 2021 to 2041 is forecast to remain the same (at about 25% of Yamhill County's total population).

McMinnville's ability to retain people in this age group will depend, in part, on whether the City has opportunities for housing that both appeal to and are affordable to Millennials. In the near-term, Millennials may increase demand for rental units. The long-term housing preferences of Millennials are uncertain. Research suggests that Millennials' housing preferences may be similar to Baby Boomers, with a preference for smaller, less-costly units. Recent surveys about housing preference suggest that Millennials want affordable single-family homes in areas that offer transportation alternatives to cars, such as suburbs or small cities with walkable neighborhoods.[38]

A recent survey of people living in the Portland region shows that Millennials prefer single-family detached housing. The survey finds that housing price is the most important factor in choosing housing for younger residents.[39] The survey results suggest Millennials are more likely than other groups to prefer housing in an urban neighborhood or town center. While this survey is for the Portland region, it shows results similar to national surveys and studies about housing preference for Millennials.

Growth in Millennials in McMinnville will increase demand for affordable single-family detached housing (including cottages) in the long-term and affordable town houses and multifamily housing in the near term. The preference for Millennials to locate in urban neighborhoods or town centers may also increase demand for town homes and multifamily housing types. Growth in this population will result in increased demand for both ownership and rental opportunities, with an emphasis on housing that is comparatively affordable.

---

[36] No formal agreement on when the Millennial generation starts or ends exists. For this report, we define the Millennial generation as individuals born in 1980 through 2000.

[37] M. Dimock, "Defining Generations: Where Millennials End and Post-Millennials Begin," Pew Research Center, March 2018. http://www.pewresearch.org/fact-tank/2018/03/01/defining-generations-where-millennials-end-and-post-millennials-begin/.

Increased Diversity[40]

McMinnville is becoming more ethnically diverse. The Hispanic and Latino population grew from 15% of McMinnville's population in 2000 to 22% of the population in the 2012–2016 period, adding more than 3,426 new Hispanic and Latino residents. Much of this diversity is due to immigration: 14% of McMinnville's population is foreign born, and of this population, 78% have immigrated from Mexico.

The US Census Bureau forecasts that at the national level, the Hispanic and Latino population will continue growing faster than most other non-Hispanic populations between 2021 and 2041. The Census forecasts that the Hispanic and Latino population will increase 93% from 2016 to 2060 and the foreign-born Hispanic population will increase by about 40% in that same time.[41] According to the *State of Hispanic Homeownership Report* from the National Association of Hispanic Real Estate Professionals,[42] Hispanics accounted for 28.6% of the nation's household formation in 2017. Household formations, for Hispanic homeowners specifically, accounted for 15% of the nation's net homeownership growth. The rate of homeownership for Hispanics increased from 45.4% in 2014[43] to 46.2% in 2017. The only demographic that increased their rate of homeownership from 2016 to 2017 was Hispanics.

The *State of Hispanic Homeownership Report* also cites the lack of affordable housing products as a substantial barrier to homeownership. The report finds that Hispanic households are more likely than non-Hispanic households to be nuclear households, comprised of married couples with children and multigeneration households in the same home, such as parents and adult children living together.

The population of McMinnville is now, and has historically been, more ethnically diverse than Yamhill County and Oregon. Continued growth in the Hispanic and Latino population will affect McMinnville's housing needs in a variety of ways.[44] Growth in first- and, to a lesser extent, second- and third-generation Hispanic and Latino immigrants will increase demand for larger dwelling units to accommodate the larger average household sizes for these households. Foreign-born households, including Hispanic and Latino immigrants, are more likely to live in multigenerational households, requiring more bedrooms/space. As Hispanic and Latino households integrate over generations, household size typically decreases, and their housing needs become similar to housing needs for all households.

---

[40] The US Census Bureau considers race and ethnicity as two distinct concepts. The Census applies two categories for ethnicity, which are Hispanic or Latino (i.e., Latinx) and Not Hispanic or Latino (i.e., Non-Latinx). Latinx is an ethnicity and not a race, meaning individuals who identify as Latinx may be of any race. The share of the population that identifies as Latinx should not be added to percentages for racial categories.

[41] US Census Bureau, *Demographic Turning Points for the United States: Population Projections for 2020 to 2060*, pg. 7.

[42] National Association of Hispanic Real Estate Professionals, *2017 State of Hispanic Homeownership Report*.

[43] Ibid.

[44] Pew Research Center, *Second-Generation Americans: A Portrait of the Adult Children of Immigrants*, February 7, 2012; National Association of Hispanic Real Estate Professionals, *2017 State of Hispanic Homeownership Report*.

Growth in Hispanic and Latino households will result in increased demand for housing of all types, both for ownership and rentals, with an emphasis on housing that is comparatively affordable and can accommodate multiple generations and larger household sizes.

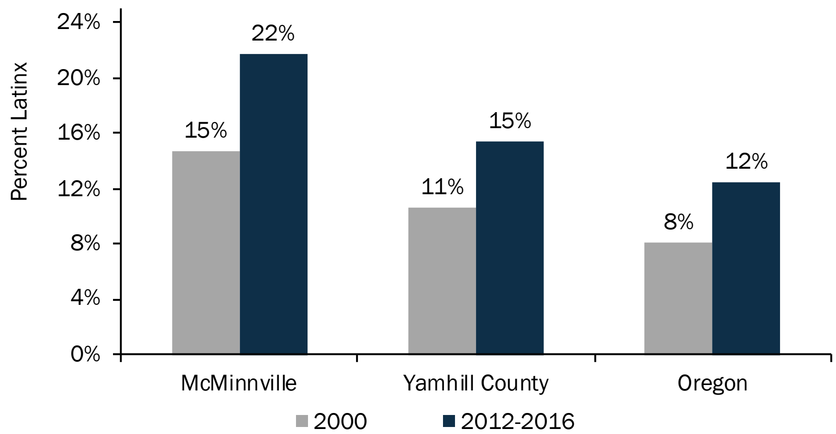
McMinnville is and has historically been more ethnically diverse than Yamhill County and Oregon.

The share of McMinnville's population that identifies as Latinx increased by 7% from 2000 to 2012–2016.

In this same time, the share of Yamhill County and Oregon's Latinx population increased by 4%.

Exhibit 38. Latinx Population as a Percent of the Total Population, McMinnville, Yamhill County, and Oregon, 2000 to 2012–2016

Source: US Census Bureau, 2000 Decennial Census Table P008, 2012–2016 ACS Table B03002.



McMinnville and Yamhill County are less racially diverse than the State. McMinnville's racial composition is similar to that of Yamhill County.

Only about 10% of McMinnville's population is nonwhite, compared to 15% in Oregon.

Exhibit 39. Race[45] as a Percent of the Total Population, McMinnville and Comparison Regions, 2012–2016

Source: US Census Bureau, 2012–2016 ACS Table B03002.

61%	35%	5%
White	Latino	Another ethnicity

Household Size and Composition

McMinnville's household size and composition show that households in McMinnville are somewhat different than averages across the State. McMinnville had 12,376 households according to 2013–2017 ACS data. McMinnville's and Yamhill County's households are larger and possess fewer nonfamily households.

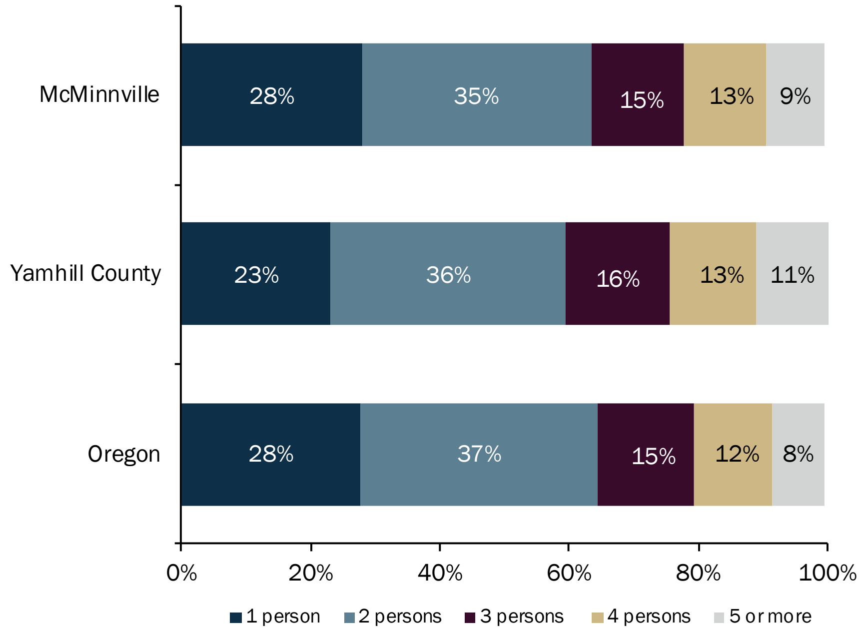
McMinnville's average household size is slightly smaller than Yamhill County's but comparable to the State's.

Exhibit 42. Average Household Size, McMinnville, Yamhill County, and Oregon, 2013–2017
Source: US Census Bureau, 2013–2017 ACS Table B25010. US Census Bureau, 2010 Decennial Census, Table H12H, H12.

	McMinnville	Yamhill County	Oregon
(2013–2017) Total Occupied Housing Units	2.55 Persons	2.70 Persons	2.50 Persons
(2010) Total Occupied Housing Units	2.61 Persons	2.70 Persons	2.47 Persons
(2010) Occupied Housing Units with Latino/Hispanic Householder	4.11 Persons	4.08 Persons	3.68 Persons

About 60% of households in McMinnville, Yamhill County, and the State are composed of one and two people.

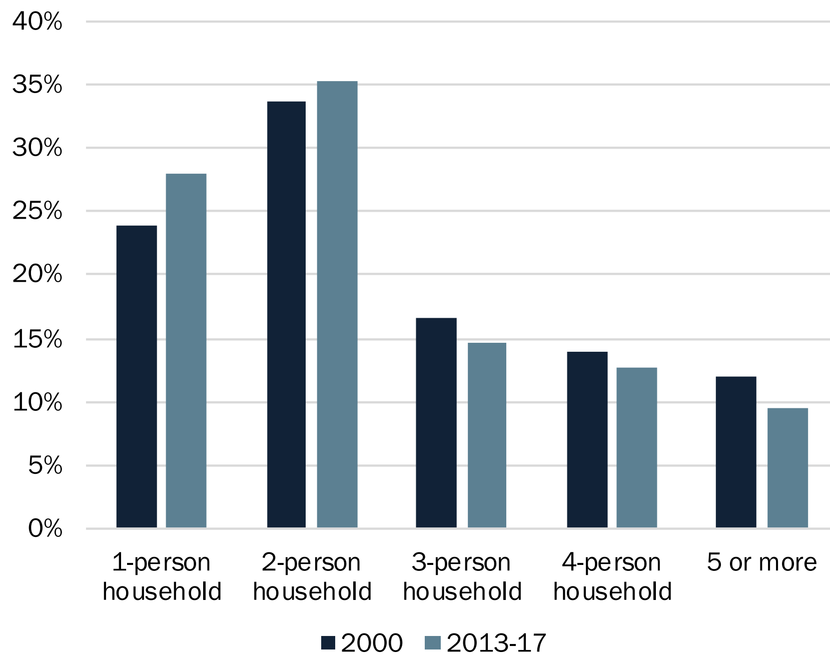
Exhibit 43. Household Size, McMinnville, Yamhill County, and Oregon, 2013–2017
Source: US Census Bureau, 2013–2017 ACS, Table B25009



McMinnville's household size composition stayed relatively constant from 2000 to 2013–2017.

The majority of McMinnville households are composed of one and two people.

Exhibit 44. Household Size, McMinnville, 2000 to 2013–17
Source: US Census Bureau, 2013–2017 ACS, Table B25009.

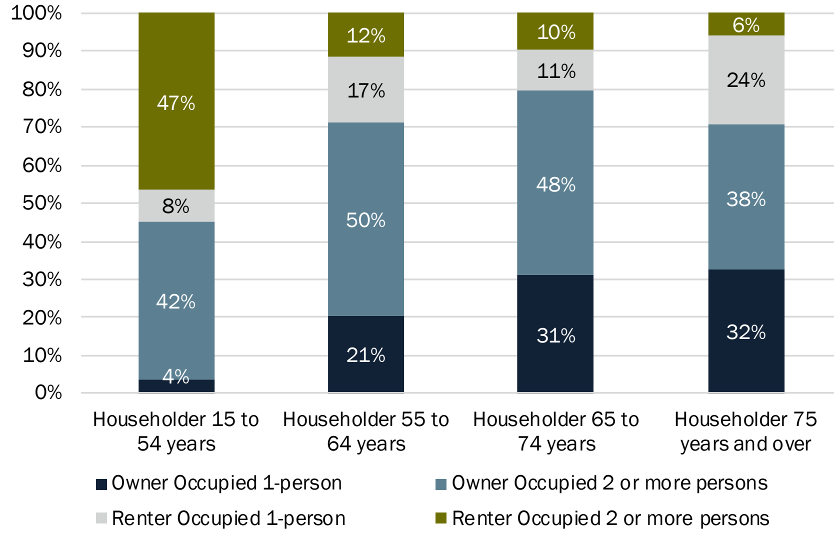


Homeownership rates peak between 65 and 74 years of age—nearly 80% of households in this age group owned their home.

Comparatively, 45% of householders aged 15 to 54 reside in owner-occupied housing, most of which (42%) live in a household with two or more people.

Exhibit 45. Tenure by Household Size by Age of Householder, McMinnville, 2013–2017

Source: US Census Bureau, 2013–2017 ACS, Table B25116.

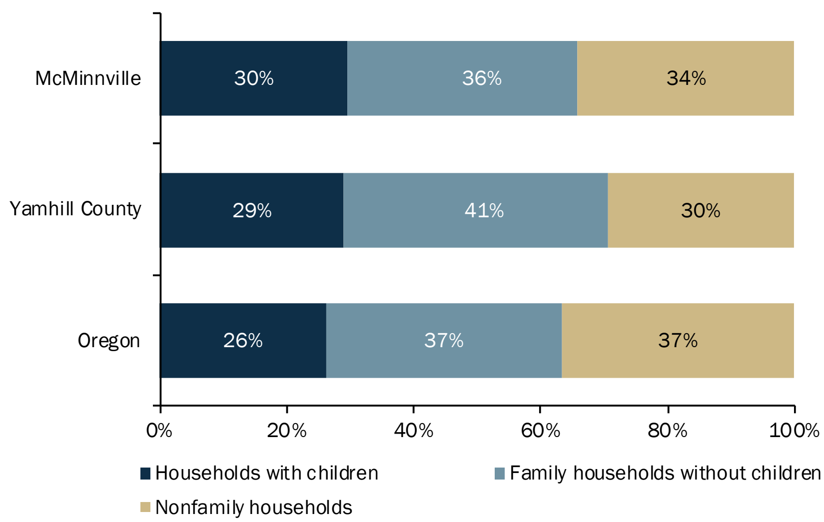


McMinnville and the County have a smaller share of nonfamily households than the State.

In McMinnville, 34% of households are nonfamily, compared to 30% of Yamhill County households and 37% of Oregon households.

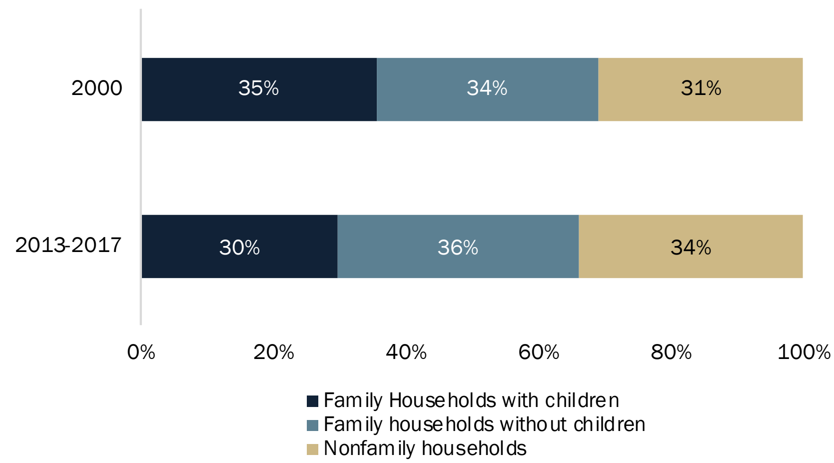
Exhibit 46. Household Composition, McMinnville, 2013–2017

Source: US Census Bureau, 2013–2017 ACS, Table DP02.



The share of family households without children increased in McMinnville from 2000 to 2017.

Exhibit 47. Household Composition, McMinnville, 2000 to 2013–2017
Source: US Census Bureau, 2000 Decennial Census and 2013–2017 ACS, Table DP02.

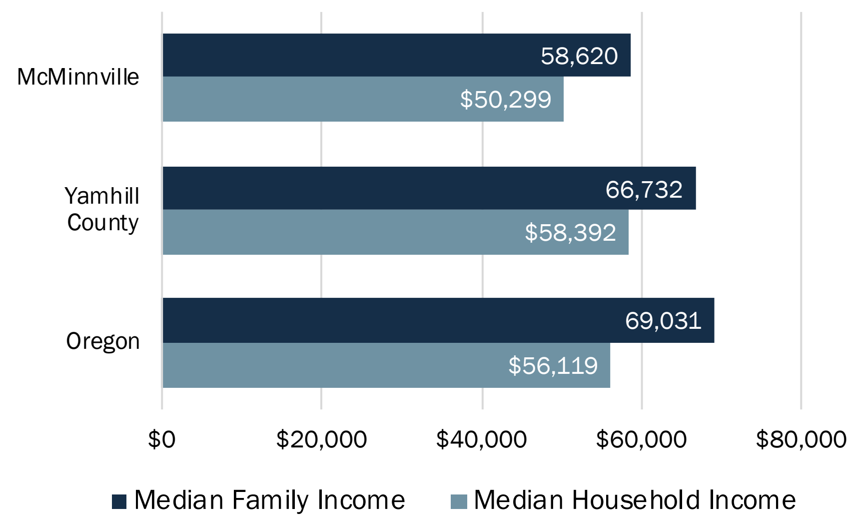


Income of McMinnville Residents

Income is one of the key determinants in housing choice and households' ability to afford housing. Incomes for people living in McMinnville are lower than that of Yamhill County and Oregon.

In the 2013–2017 period, McMinnville's median household income and median family income was below that of comparison regions.

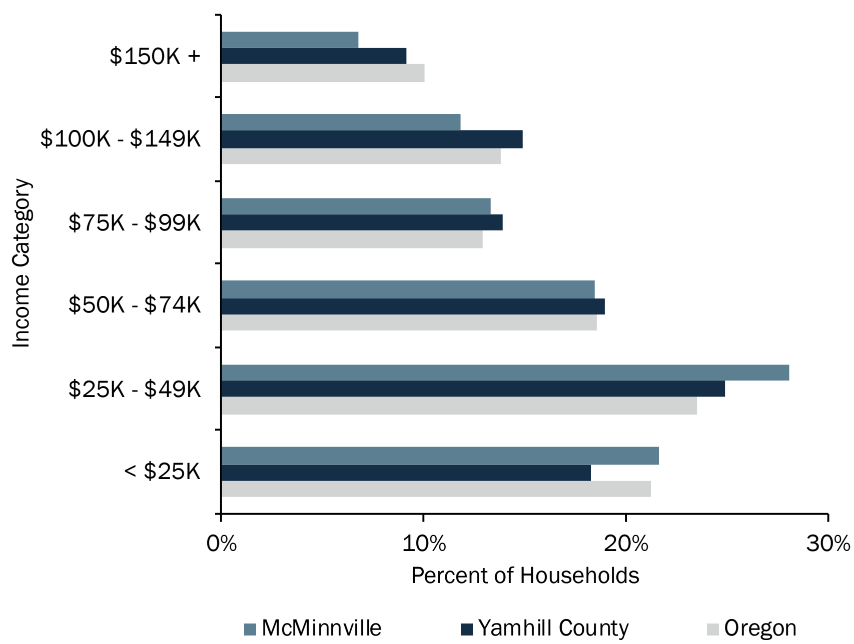
Exhibit 48. Median Household Income and Median Family Income, McMinnville, Yamhill County, and Oregon, 2013–2017
Source: US Census Bureau, 2013–2017 ACS Table B25119 and B19113.



Fifty percent of McMinnville households make $50,000 or less per year.

In comparison, 43% of Yamhill County and 45% of the State make $50,000 or less per year.

Exhibit 49. Household Income, McMinnville, Yamhill County, and Oregon, 2013–2017
Source: US Census Bureau, 2013–2017 ACS, Table B19001.

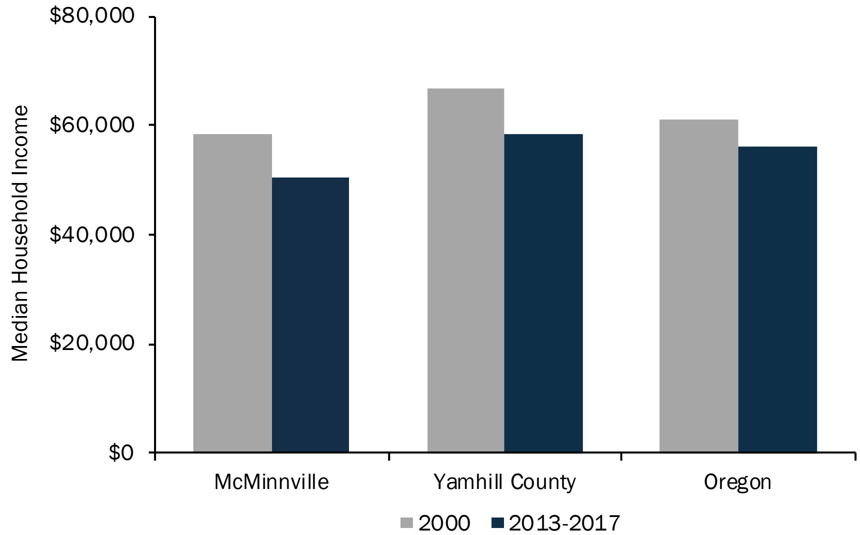


After adjusting for inflation, McMinnville's median household income decreased by 14% from 2000 to 2013–2017, from $58,356 to $50,299 per year.

Yamhill County and Oregon also experienced real decreases in median housing income after adjusting for inflation.

Exhibit 50. Median Household Income (2017 Inflation-Adjusted), McMinnville, Yamhill County, Oregon, 2000 and 2013–2017

Source: US Census Bureau, 2000 Decennial Census, Table HCT012, 2013–2017 ACS Table B25119.



Homelessness

The number of homeless persons in Yamhill County increased by over 300 people (30%), from 2015 to 2017.

For Yamhill County, the Point-in-Time homeless estimate was 1,066 persons in 2017 and 1,386 persons in 2018.

Exhibit 51. Point-in-Time Homeless Counts, Sheltered vs. Unsheltered, Yamhill County, 2017 and 2018
Source: Yamhill Community Action Partnership. Note: Point-in-time homeless count took place on January 31, 2018, and January 25, 2017.

2017	21% Percent Sheltered	25% Percent Unsheltered	54% Precariously Housed (e.g., couch surfing)	1,066 Total Homeless (PIT)
2018	17% Percent Sheltered	30% Percent Unsheltered	53% Precariously Housed (e.g., couch surfing)	1,386 Total Homeless (PIT)

In the 2016–2017 school year, 525 students experienced homelessness.

Exhibit 52. Students Experiencing Homelessness, Yamhill County and Oregon, 2016–2017 School Year

Yamhill County	3% Percent of Homeless Students	525 Total Homeless Students	16,791 Total Students
Oregon	4% Percent of Homeless Students	25,088 Total Homeless Students	578,947 Total Students

Commuting Trends

McMinnville is part of the complex, interconnected economy of Yamhill County that is considered part of the Portland metropolitan region by the US Census Bureau. Of the more than 14,600 people who work in McMinnville, about 62% of workers commute into McMinnville from other areas, (most notably Portland, Salem, and Newberg).

About 9,038 people commute into McMinnville for work, and 8,657 people commute out of McMinnville for work.

Exhibit 53. Commuting Flows, McMinnville 2015

Regional and Local Trends Affecting Affordability in McMinnville

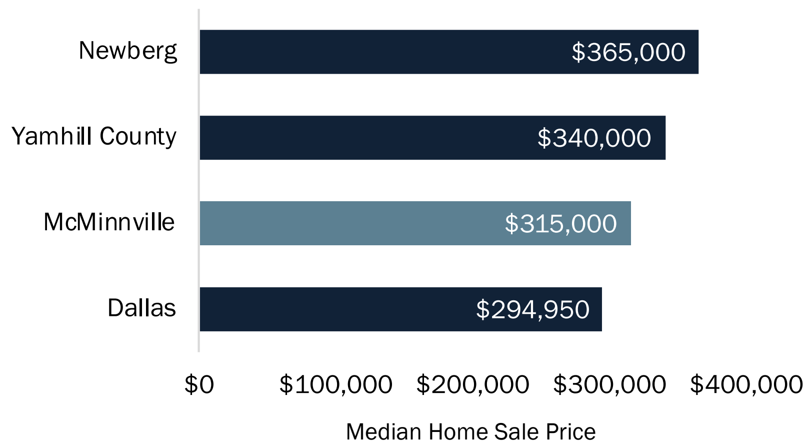
This section describes changes in sales prices, rents, and housing affordability in McMinnville, Yamhill County, and comparison cities. The section uses 2012–2016 ACS data, as findings are not safe harbor assumptions (which require use of data from the 2013–2017 census).

Changes in Housing Costs

With a median sales price of $315,000 in February 2019, McMinnville's housing sales prices are slightly lower than that of Yamhill County. McMinnville housing prices are increasing, and they have outpaced growth in median household incomes.

McMinnville's median home sales price was lower than the County's median home sales price in February 2019 (by $25,000).

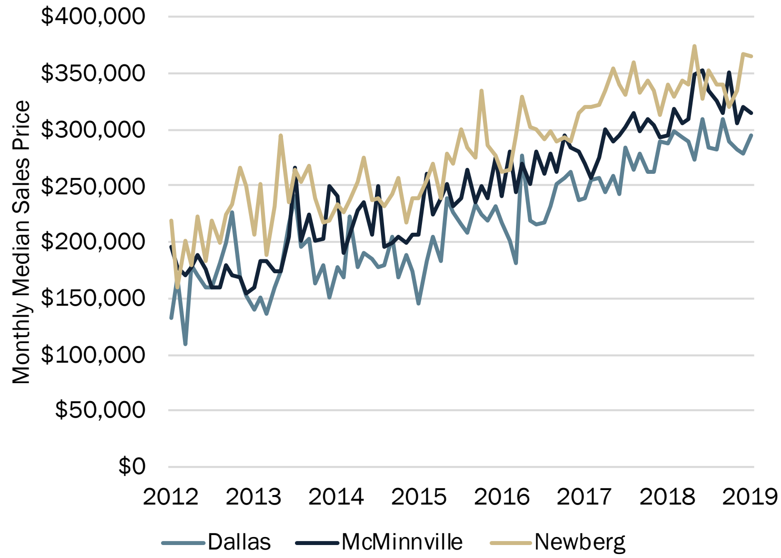
Exhibit 57. Median Sales Price, McMinnville and Comparison Geographies, February 2019
Source: Redfin.



Between February of 2012 and February of 2019, median home sales prices in McMinnville rose steadily, increasing from $196,400 to $350,000.

In this same time, McMinnville's median home sales price increased by 78%. In comparison, Dallas's median home sales price increased by 108% and Newberg's by 70%.

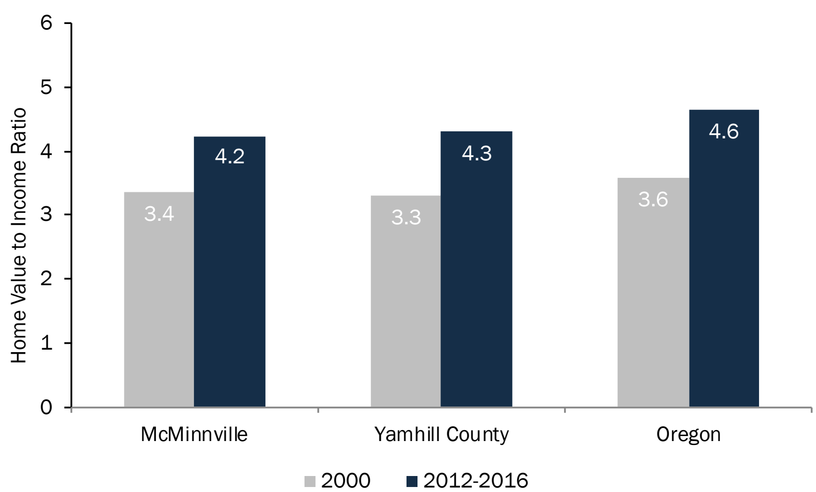
Exhibit 58. Monthly Median Sales Price, McMinnville and Comparison Geographies, February 2012 through February 2019
Source: Redfin Median Sales Data 2018.



Since 2000, housing costs in McMinnville, like comparison regions, have increased faster than incomes.

The median value of a house in McMinnville was 3.4 times the median household income in 2000 and 4.2 times median household income in 2012–2016.

Exhibit 59. Ratio of Median Housing Value to Median Household Income, McMinnville, Yamhill County, and Oregon, 2000 to 2012–2016[46]
Source: US Census Bureau, 2000 Decennial Census, Tables HCT012 and H085, and 2012–2016 ACS, Tables B19013 and B25077.



[46] This ratio compares the median value of housing in McMinnville and other places to the median household income. Inflation-adjusted median owner values in McMinnville increased from $187,469 in 2000 to $200,800 in 2012–2016. Over the same period, median income decreased from $55,930 to $47,460.

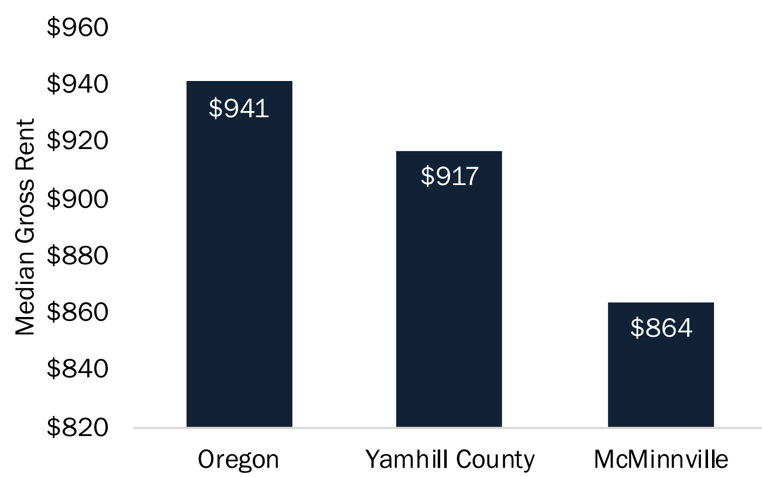
Changes in Rental Costs

Rent costs in McMinnville are lower than in Yamhill County and Oregon as a whole. The following charts show gross rent (which includes the cost of rent plus utilities) for McMinnville in comparison to the County and State. The section uses 2012–2016 ACS data, as findings are not safe harbor assumptions (which require use of data from the 2013–2017 census).

The median gross rent in McMinnville is $864, which is $53 lower than Yamhill's median and $77 lower than Oregon's median.

Exhibit 60. Median Gross Rent in McMinnville, Yamhill County, and Oregon, 2012–2016

Source: US Census Bureau, 2012–2016 ACS Table B25064.

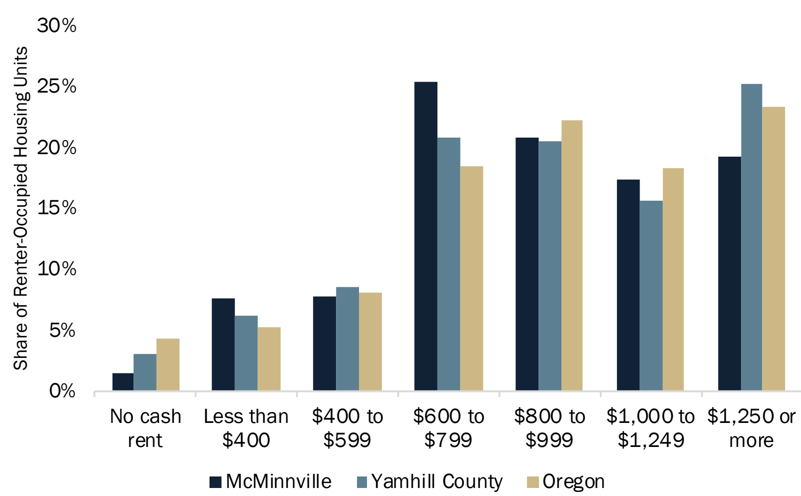


About 62% of renters in McMinnville pay less than $1,000 per month.

About 19% of McMinnville's renters pay $1,250 or more in gross rent per month, a smaller share than Yamhill County (25%) and Oregon (23%).

Exhibit 61. Gross Rent in McMinnville, Yamhill County, and Oregon, 2012–2016

Source: US Census Bureau, 2012–2016 ACS Table B25063.



Housing Affordability

A typical standard used to determine housing affordability is that a household should pay no more than 30% of household income for housing, including payments and interest or rent, utilities, and insurance. HUD guidelines indicate that households paying more than 30% of their income on housing experience "cost burden," and households paying more than 50% of their income on housing experience "severe cost burden." Using cost burden as an indicator is one method of determining how well a city is meeting the Goal 10 requirement to provide housing that is affordable to all households in a community.

About 36% of McMinnville's households are cost burdened. Renters experience much higher rates of cost burden than homeowners: 52% of renter households in McMinnville are cost burdened, compared with 25% of homeowners. Overall, McMinnville has a similar share of cost-burdened households as Yamhill County and the State overall. McMinnville also has a smaller share of cost-burdened households (total) and cost-burdened renter households than other cities in close proximity (Newberg, Independence, and Monmouth).

For example, about 23% of McMinnville households have incomes of less than $25,000 per year, which is about 50% of McMinnville's median household income. Based on HUD's 30% cost-burden threshold, these households can afford monthly housing costs of less than $629 per month. Most, but not all, of these households are cost burdened. For instance, as Exhibit 66 illustrates, 86% of households earning less than $20,000 per year are cost burdened while only 20% of households earning between $50,000 and $75,000 are cost burdened.

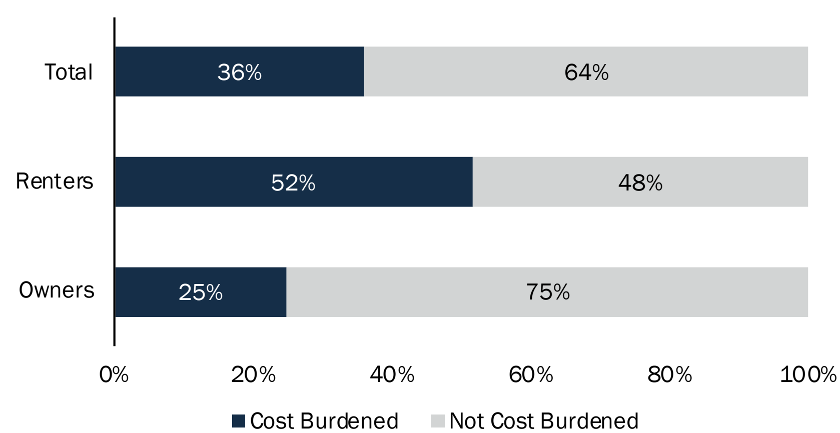
The section uses 2012–2016 ACS data, as findings are not safe harbor assumptions (which require use of data from the 2013–2017 census).

Renters are much more likely to be cost burdened than homeowners.

Cost-burden rates are higher among renters in McMinnville than among homeowners. In 2016, about 52% of renters were cost burdened, compared to 25% of homeowners.

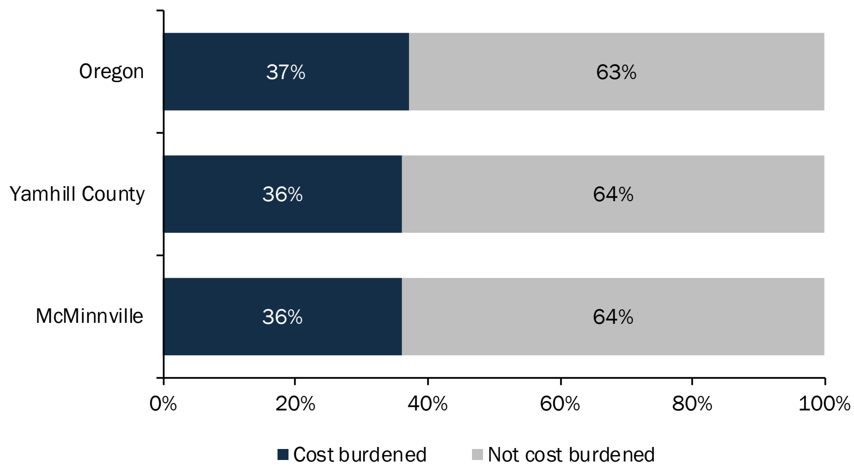
Exhibit 62. Housing Cost Burden by Tenure, McMinnville, 2012–2016

Source: US Census Bureau, 2012–2016 ACS Tables B25091 and B25070.



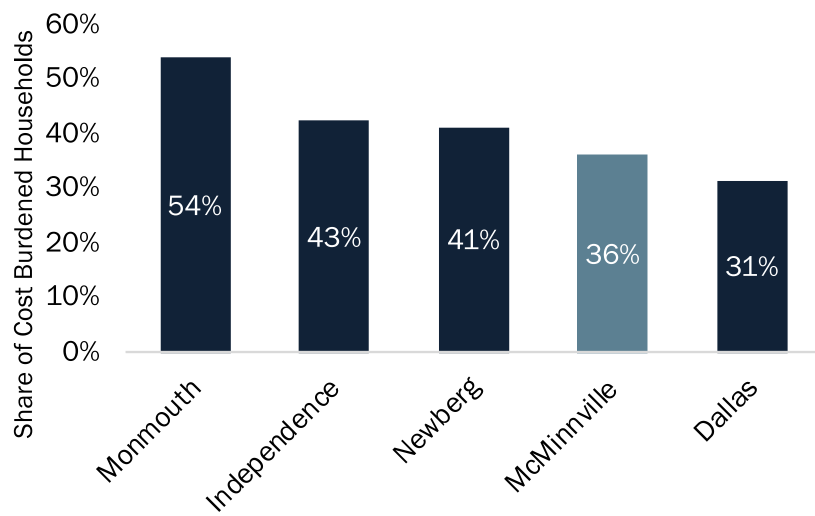
The share of McMinnville households that are cost burdened is similar to the share of cost-burdened households in the County and State.

Exhibit 63. Housing Cost Burden, McMinnville and Comparison Regions, 2012–2016
Source: US Census Bureau, 2012–2016 ACS Tables B25091 and B25070.



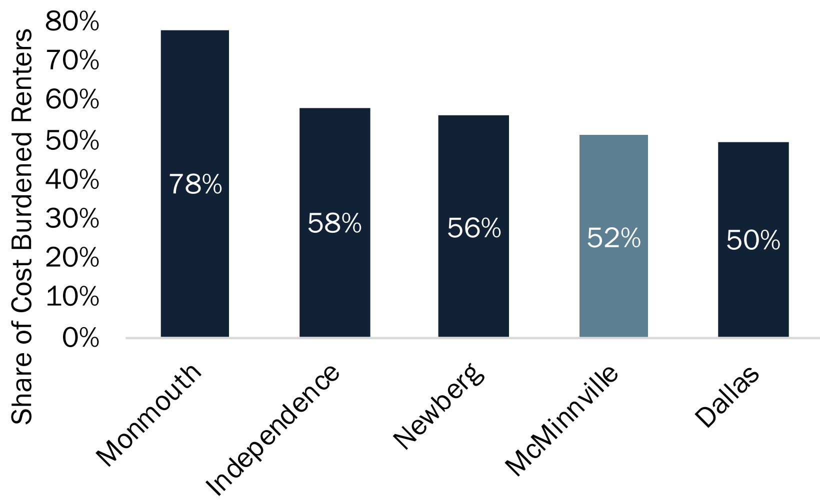
Other communities in the region have a larger share of cost-burdened households than McMinnville does.

Exhibit 64. Cost-Burdened Households, McMinnville and Comparison Cities, 2012–2016
Source: US Census Bureau, 2012–2016 ACS Tables B25091 and B25070.



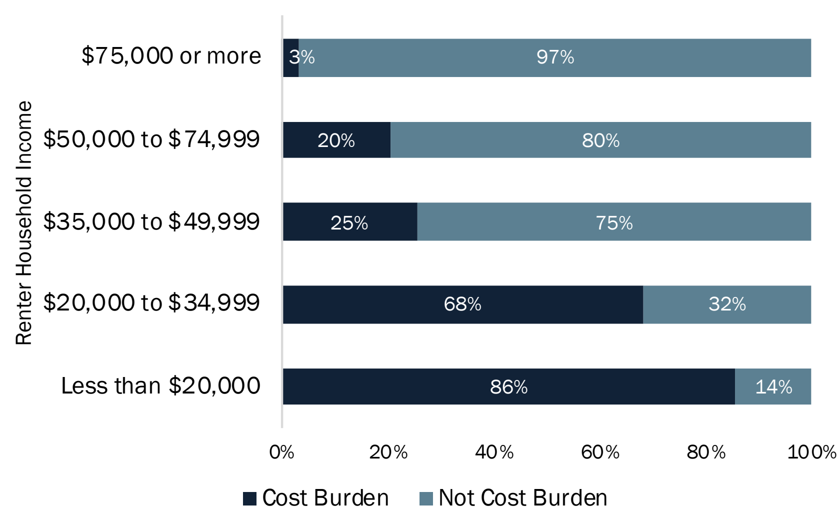
Similar to other comparison cities in the region, over half of renter households in McMinnville are cost burdened.

Exhibit 65. Cost-Burdened Renter Households, McMinnville and Comparison Cities, 2012–2016
Source: US Census Bureau, 2012–2016 ACS Table B25070.



Households with incomes less than $35,000 experience much higher rates of cost burden than higher-income households. Eighty-six percent of households, making less than $20,000 per year were cost burdened and 68% of households making between $20,000 and $35,000 were cost burdened.

Exhibit 66. Cost-Burdened Households by Household Income, McMinnville, 2013–2017
Source: US Census Bureau, 2013–2017 ACS Table B25074.



While cost burden is a common measure of housing affordability, it does have some limitations. Two important limitations are:

- A household is defined as cost burdened if the housing costs exceed 30% of their income, regardless of actual income. The remaining 70% of income is expected to be spent on nondiscretionary expenses, such as food or medical care, and on discretionary expenses. Households with higher incomes may be able to pay more than 30% of their income on housing without impacting the household's ability to pay for necessary nondiscretionary expenses. Thus, some households with higher incomes may choose housing that technically results in cost burden, even if other housing options are available that would not result in cost burden.
- Cost burden compares income to housing costs and does not account for accumulated wealth. As a result, the estimate of how much a household can afford to pay for housing does not include the impact of a household's accumulated wealth. For example, a household with retired people may have relatively low income but may have accumulated assets (such as profits from selling another house) that allow them to purchase a house that would be considered unaffordable to them based on their household income.

Another way of exploring the issue of financial need is to review housing affordability at varying levels of household income.

Fair market rent for a 2-bedroom apartment in Yamhill County is $1,330

Comparing the number of households by income with the number of units affordable to those households in McMinnville reflects a current deficit of housing affordable to households earning between $10,000 and $25,000 annually and households earning $100,000 or more annually. McMinnville has a deficit of all types of government-assisted housing; more affordable housing types (such as manufactured housing in parks and lots, small-homes, duplexes, triplexes, quadplexes, small-lots, and apartments); and housing types of higher values (such as high-amenity or executive housing).

*ACS 2013-2017 five-year estimates, table S1903.

Implication 1

Some lower-income households live in housing that is more expensive than they can afford because affordable housing is not available. These households are cost burdened.

Implication 2

Some higher-income households choose housing that costs less than they can afford. This may be the result of the household's preference or it may be the result of a lack of higher-cost and higher-amenity housing that would better suit their preferences.

Summary of the Factors Affecting McMinnville's Housing Needs

The purpose of the analysis thus far has been to provide background on the kinds of factors that influence housing choice, and in doing so, to convey why the number and interrelationships among those factors ensure that generalizations about housing choice are difficult to make and prone to inaccuracies.

There is no question that age affects housing type and tenure. Mobility is substantially higher for people ages 20 to 34. People in this age group will also have, on average, less income than people who are older. These factors mean that younger households are much more likely to be renters, and renters are more likely to be in multifamily housing (58% in McMinnville).

The data conveys what more detailed research has shown and what most people understand intuitively: life cycle and housing choice interact in ways that are predictable in the aggregate; age of the household head is correlated with household size and income; household size and age of household head affect housing preferences; and income affects the ability of a household to afford a preferred housing type. The connection between socioeconomic and demographic factors and housing choice is often described informally by giving names to households with certain combinations of characteristics: the "traditional family," the "never-marrieds," the "dinks" (dual-income, no kids), the "empty nesters."[47] Simply looking at the long wave of demographic trends can provide good information for estimating future housing demand.

Thus, one is ultimately left with the need to make a qualitative assessment of the future housing market. The following is a discussion of how demographic and housing trends are likely to affect housing in McMinnville over the next twenty years:

- **Growth in housing will be driven by growth in population.** Between 1990 and 2017, McMinnville's population grew by 15,771 people or 88%. The population in McMinnville's UGB is forecast to grow from 36,238 (in 2021) to 47,498 (in 2041), an increase of 11,260 people (31%).[48]
- **Housing affordability will be a growing challenge in McMinnville.** Housing affordability is a challenge in Oregon in general, and McMinnville is affected by this statewide trend. Housing prices are increasing faster than incomes in McMinnville and Yamhill County, consistent with state and national challenges. While 23% of McMinnville housing is multifamily housing, the County has a relatively small supply of multifamily housing (15%), which constrains the supply of affordable housing for the region—thus affecting the City.[49] For instance, over half of renters in McMinnville are

---

[47] See *Planning for Residential Growth: A Workbook for Oregon's Urban Areas* (June 1997).

[48] This forecast is based on McMinnville's official forecast from the Oregon Population Forecast Program for the 2021 to 2041 period.

[49] The share of multifamily housing stock is driven by demographics and market factors. Often, as the population within cities increases, the share of single-family detached housing decreases.

cost burdened, which is indicative of a lack of affordable rental units, such as multifamily and other housing types (e.g., single-family detached and single-family attached dwelling units). McMinnville's key challenge over the next twenty years is providing opportunities for not only the development of housing of all types but development across the affordability spectrum; in particular, there is a need for more affordable housing types, which developers may be less incentivized to develop.

- **Without substantial changes in housing policy (at all levels of government), on average, future housing will look a lot like past housing.** That is the assumption that underlies any trend forecast, and one that allows some quantification of the composition of demand for new housing.

  The City's residential policies can impact the amount of change in McMinnville's housing market to some degree. If the City adopts policies to increase opportunities to build housing types that are affordable to low- and moderate-income households, a larger percentage of new housing developed over the next twenty years in McMinnville may be relatively affordable compared to the past.

  Examples of policies that the City could adopt to achieve this outcome include (1) allowing a wider range of housing types (e.g., duplexes, triplexes, town houses, cottage clusters, or single-lot small-home subdivisions) in single-family zones to promote inclusivity and equity, ensuring that there is sufficient land zoned to allow single-family attached and multifamily housing and other innovative affordable housing development; (2) supporting development of government-subsidized affordable housing, and (3) encouraging multifamily residential development in downtown. Ultimately, the degree of change in McMinnville's housing market, however, will depend on market demand for these types of housing in McMinnville, Yamhill County, and the greater region.

- **If the future differs from the past, and policy changes are prescribed, the future of housing in McMinnville is likely to move in the direction (on average) of smaller units and more diverse housing types.** Most, but not all, of the demographic evidence suggests that the bulk of the change should be in the direction of smaller average house and lot sizes for single-family housing. This includes providing opportunities for development of smaller single-family detached homes, town homes, and multifamily housing.

  Key demographic and economic trends that will affect McMinnville's future housing needs are:(1) the aging of Baby Boomers, (2) the aging of Millennials, and (3) the continued growth of the Hispanic and Latino population.

  - *The Baby Boomer population is continuing to age.* By 2041, people 60 years and older will account for about 28% of the population in McMinnville (up from 23% in 2017). As the population ages, household sizes and homeownership rates will decrease. The majority of Baby Boomers are expected to remain in their homes as long as possible, downsizing or moving when illness or other issues cause them to move. With Baby Boomers' debt "reaching $5.3 trillion by 2030. Many retirees may [also] downsize their homes to pay off debt and boost retirement savings,"

which will open up housing opportunities for Gen Xers and Millennials.[50] Demand for specialized senior housing may grow in McMinnville, such as visitable age-restricted housing and housing in a continuum of care (from independent living to in-home nursing care).

- *Millennials will continue to age.* By 2041, Millennials will be roughly between about 41 years old to 61 years old. As they age, generally speaking, their household sizes will increase, and homeownership rates will peak by about age 55. Between 2021 and 2041, Millennials will be a key driver in demand for housing for families with children. The ability to retain Millennials will depend on availability of affordable rental and ownership housing. The decline in homeownership among the Millennial generation has more to do with financial barriers rather than the preference to rent.[51]
- *The Hispanic and Latino population will continue to grow.* The US Census projects that by about 2041, the Hispanic and Latino population will account for about one-quarter of the nation's population. The share of the Hispanic and Latino population in the western United States is likely to be higher. The Hispanic and Latino population currently accounts for about 22% of McMinnville's population. In addition, the Hispanic and Latino population is generally younger than the U.S. average, with many Hispanic and Latino people belonging to the Millennial generation.

  Hispanic and Latino population growth will be an important driver in growth of housing demand, both for owner- and renter-occupied housing. Growth in the Hispanic and Latino population will drive demand for larger housing for families with children. Given the lower income for Hispanic and Latino households, especially first-generation immigrants, growth in this group will also drive demand for affordable housing, both for ownership and renting. [52]

In summary, an aging population, increasing housing costs (although lower than the region), housing affordability concerns for Millennials and the Hispanic and Latino populations, and other variables support the need for a broader array of housing choices than are available today.

---

[50] V. Srinivas and U. Goradia, "The Future of Wealth in the United States," Deloitte Insights, 2015. https://www2.deloitte.com/insights/us/en/industry/investment-management/us-generational-wealth-trends.html

[51] Ibid.

[52] The following articles describe housing preferences and household income trends for Hispanic and Latino families, including differences in income levels for first-, second-, and third-generation households. In short, Hispanic and Latino households have a lower median income than the national averages. First- and second-generation Hispanic and Latino households have median incomes below the average for all Hispanic and Latino households. Hispanic and Latino households have a strong preference for homeownership, but availability of mortgages and availability of affordable housing are key barriers to homeownership for this group.

Pew Research Center, *Second-Generation Americans: A Portrait of the Adult Children of Immigrants*, February 7, 2012.

National Association of Hispanic Real Estate Professionals, *2014 State of Hispanic Homeownership Report*.

Growth of seniors will drive demand for smaller single-family detached housing and town homes, as well as multifamily rentals, age-restricted housing, and assisted-living facilities. Growth in Millennials and the Hispanic and Latino population will drive demand for smaller and larger affordable housing types, including demand for single-family units (many of which may be ownership units) and for multifamily units (many of which may be rental units). Growth in the Hispanic and Latino population and the aging of the Baby Boomer generation will increase demand for multigenerational housing. McMinnville's share of households (41%) earning more than 120% of median household income will increase demand for high-amenity housing or all types.

The purpose of the housing forecasting in this study is to get an approximate idea about the future so policy choices can be made today. Economic forecasters regard any economic forecast more than three (or at most five) years out as highly speculative. At one year, one is protected from being disastrously wrong by the sheer inertia of the economic machine. But a variety of factors or events could cause growth forecasts to be substantially different.

5. Housing Need in McMinnville

This chapter analyzes housing needs in McMinnville for the next 5, 10, 20, and 46 years. Much of the emphasis is on the 20-year forecast, as it is required by Goal 10. The analysis also provides projections of housing by type. Depending on the development configurations and character of McMinnville's neighborhoods, different areas of the City may have distinct or dissimilar housing types and densities. The aggregate total density is used in this analysis, as well as densities that correspond to current zoning classifications.

Project New Housing Units Needed in the Next 5, 10, 20, and 46 Years

The results of the housing needs analysis are based on (1) the official population forecast for growth in McMinnville over the 5-, 10-, 20-, and 46-year planning periods, (2) information about McMinnville's housing market relative to Yamhill County and nearby comparison cities, and (3) the demographic composition of McMinnville's existing population and expected long-term changes in the demographics of Yamhill County.

Projection for Housing Growth

This section describes the key assumptions and presents an estimate of new housing units needed in McMinnville between 2021 and 2041, shown in Exhibit 72. The key assumptions are based on the best available data and may rely on safe harbor provisions (or safe harbor methodologies), when available.[53]

- **Population.** A 20-year population forecast (in this instance, 2021 to 2041) is the foundation for estimating needed new dwelling units. McMinnville's urban area is forecast to grow from 36,238 persons in 2021 to 47,498 persons in 2041, an increase of 11,260 people.[54]
- **Persons in Group Quarters.** Typically, persons in group quarters do not consume standard housing units: thus, any forecast of new people in group quarters is typically derived from the population forecast for the purpose of estimating housing demand. Group quarters can have a big influence on housing in cities with colleges (dorms), prisons, or a large elderly population (nursing homes). In general, any new requirements for these housing types will be met by institutions (colleges,

[53] A safe harbor is an assumption that a city can use in a housing needs analysis, which the State has said will satisfy the requirements of Goal 14. OAR 660-024 defines a safe harbor as "an optional course of action that a local government may use to satisfy a requirement of Goal 14. Use of a safe harbor prescribed in this division will satisfy the requirement for which it is prescribed. A safe harbor is not the only way, or necessarily the preferred way, to comply with a requirement and it is not intended to interpret the requirement for any purpose other than applying a safe harbor within this division."

[54] This forecast is based on McMinnville's official forecast from the Oregon Population Forecast Program for the 2021 to 2041 period.

government agencies, health-care corporations) operating outside what is typically defined as the housing market. Nonetheless, group quarters require residential land. They are typically built at densities that are comparable to that of multifamily dwellings.

The 2013–2017 American Community Survey shows that 5% of McMinnville's population was in group quarters. However, the population in group quarters, in total number, has declined over the last decade. City of McMinnville staff and the Project Advisory Committee considered three options[55] to address the population in group quarters. Staff recommended—and the majority of the Project Advisory Committee agreed—that for the purpose of this analysis, we assume that group quarters will be met through the same land needs as the net new population without allocating housing to group quarters separately (option 3). This assumption does not mean that we are assuming zero group quarters for the planning periods.

- **Household Size.** OAR 660-024 established a safe harbor assumption for average household size—which is the figure from the current Decennial Census at the time of the analysis. According to the 2013–2017 American Community Survey, the average household size in McMinnville was 2.55 people. Thus, for the 2021 to 2041 period, we assume an average household size of 2.55 persons.

- **Vacancy Rate.** The Census defines vacancy as "unoccupied housing units . . . determined by the terms under which the unit may be occupied, e.g., for rent, for sale, or for seasonal use only." The Census determines vacancy status and other characteristics of vacant units by enumerators obtaining information from property owners and managers, neighbors, rental agents, and others.

  Vacancy rates are cyclical and represent the lag between demand and the market's response to demand for additional dwelling units. Vacancy rates for rental and

[55] **Option 1:** Use the "share method," then assign one person per group quarter, and assign group quarters to land need at the same density as multifamily development.

Option 2a: Use the "share method," then assign an analogous household size, and then apply that to the population to calculate land needs. Two Project Advisory Committee members requested this method instead of Option 1.

Option 2b: Use the "share method," then assign a direct group quarters population per acre estimate. This method directly assigns population density for group quarters rather than rely on use of an interim assignment step analogous to household size.

Option 3: Do not use the "share method." Instead, use assumptions and methods based on McMinnville-specific group quarters data and PSU's official population forecast for McMinnville. This option assigns all new net population growth to housing units. This method assumes the population in group quarters at Linfield and the jail will remain relatively constant. The population in other group quarters represents less than 1% of McMinnville's current population. Group quarters have also remained relatively constant and have not experienced a consistent growth trend in recent years. The group quarters population segment represents a declining share of overall population. The needed housing mix reflects a higher share of multifamily housing than the historic share. The land needs and densities for multifamily housing and group quarters are assumed to be equivalent. Without differentiating between population in multifamily housing and group quarters, the identified land needs would meet the same needs, whether the population is in housing or in group quarters.

multifamily units are typically higher than those for owner-occupied and single-family dwelling units.

OAR 660-024 established a safe harbor assumption for vacancy rate—which is the figure from the current Census. According to the 2013–2017 American Community Survey, McMinnville's vacancy rate was 5.4%. For the 2021 to 2041 period, we assume a vacancy rate of 5.4%.

McMinnville will need 4,657 new dwelling units over the 20-year period from 2021 to 2041, or an average of 233 dwelling units annually.

Exhibit 72. Forecast of Demand for New Dwelling Units, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest

Variable	New Dwelling Units (2021-2041)
Change in persons	11,260
Average household size	2.55
New occupied DU	4,416
times Aggregate vacancy rate	5.4%
equals Vacant dwelling units	241
Total new dwelling units (2021-2041)	4,657
Annual average of new dwelling units	233

Exhibit 73 presents McMinnville's forecast of demand for new dwelling units over McMinnville's other various planning horizons. It shows that McMinnville will have demand for about 1,136 new dwelling units between 2021 and 2026, and another 1,169 new dwelling units between 2026 and 2031 (totaling 2,305 for the 10-year period). McMinnville will have demand for approximately 10,986 new dwelling units for the 46-year period between 2021 and 2067.

Exhibit 73. Forecast of Demand for New Dwelling Units in 5, 10, 20, and 46 years, McMinnville UGB, 2021–2026, 2021–2031, 2021–2041, and 2021–2067
Source: Calculations by ECONorthwest

Variable	New Dwelling Units

Projection for Housing Growth Before 2021

McMinnville's 20-year planning horizon begins in 2021, resulting in an interim period during which time McMinnville will have additional population growth, new residential development, and consumption of buildable land. McMinnville's housing strategy will address these shorter-term needs, and the land-sufficiency analysis will reflect the additional land consumed between 2018 and 2021.

The Portland State University population forecast shows growth of about 1,480 people between 2018 and 2021, resulting in a need for 612 new dwelling units.[56] The population locating in McMinnville between 2018 and 2021 is considered part of the "existing population" at the beginning of the planning period, which begins in 2021. The existing population does not need to be added into the population forecast for 2021 to 2041 or the forecasts for the 5-, 10-, and 46-year planning periods. Buildable land is required to accommodate these units. Therefore, to estimate the capacity of the land supply in 2021 (at the beginning of the 20-year planning period), this analysis deducts the housing units which require buildable land between 2018-

[56] According to Portland State University's Population Research Center, McMinnville UGB had 34,293 people in 2017. ECONorthwest extrapolated the population in 2017 to 34,758 persons in 2018. McMinnville UGB forecasted that the population in 2021 will be 36,238 people (Exhibit 29), resulting in 1,480 new persons between 2018 and 2021. Using the assumptions presented in Exhibit 75, McMinnville will have demand for approximately 612 new dwelling units between 2018 and 2021.

2021 from the capacity of land in 2018 to determine the remaining capacity of land in 2021. This analysis is presented in Chapter 6.

McMinnville will have demand for 612 new dwelling units between 2018 and 2021.

Exhibit 75. Forecast of Demand for New Dwelling Units, McMinnville UGB, 2018 to 2021

times Aggregate vacancy rate	5.4%
equals Vacant dwelling units	32
Total new dwelling units (2018-2021)	612

Projection for Housing Growth by Housing Type

This section describes the factors that influenced the assumptions for the housing forecast. It also presents the housing forecast by housing type. Appendix B outlines the scenario models presented to the Project Advisory Committee, which informed their recommendation for housing mix (a core assumption for the housing forecast).

Factors Influencing the Needed Mix and Density Determination

With a population over 25,000, McMinnville is subject to the provisions of ORS 197.296(1)-(9). Goal 10 requires cities to make a housing needs projection. OAR 660-008(4) provides the specific guidance:

> (4) A housing needs projection refers to a local determination, justified in the plan, of the mix of housing types, amounts, and densities that will be:
>
> (a) commensurate with the financial capabilities of present and future area residents of all income levels during the planning period;
> (b) consistent with any adopted regional housing standards, state statutes, and Land Conservation and Development Commission administrative rules; and
> (c) consistent with Goal 14 requirements.

To make the housing needs determination, we use the information presented in the housing needs analysis. We use the following definitions to distinguish between housing need and housing market demand, which we believe to be consistent with definitions in state policy:

- *Housing need* can be defined broadly or narrowly. The broad definition is based on the mandate of Goal 10 that requires communities to plan for housing that meets the needs of households at all income levels. Goal 10, though it addresses housing, emphasizes the impacts on the households that need that housing. Since everyone needs shelter, Goal 10 requires that a jurisdiction address, at some level, how every household (and group quarters population) will be affected by the housing market over a 20-year period. In short, housing need is addressed through the local housing needs projection.

- *Housing market demand* is what households demonstrate they are willing or able to purchase (own or rent) in the market place. Growth in population means growth in the number of households, which implies an increase in demand for housing units. That demand is met primarily by the construction of new housing units by the private sector based on its judgments about the types of housing that will be absorbed by the market. ORS 197.296 includes a market supply component, called a buildable land needs analysis,[57] which must consider the density and mix of housing developed over the previous five years or since the current periodic review, whichever is greater. In concept, what got built in that five-year period, or longer, was the effective demand for new housing of those who can afford to purchase housing in the market: it is the local equilibrium of demand factors, supply factors, and price.

Cities are required to determine the average density and mix of needed housing over the next 20 years (ORS 197.296(7)). McMinnville is using a 2021 to 2041 analysis period. The determination of needed density and mix over the 2021 to 2041 period must consider the five factors listed in ORS 197.296(5) that may affect future housing need:

> (a) Except as provided in paragraphs (b) and (c) of this subsection, the determination of housing capacity and need pursuant to subsection (3) of this section must be based on data relating to land within the urban growth boundary that has been collected since the last periodic review or five years, whichever is greater. The data shall include:
>
> (A) the number, density, and average mix of housing types of urban residential development that have actually occurred;
>
> (B) trends in density and average mix of housing types of urban residential development;
>
> (C) demographic and population trends;
>
> (D) economic trends and cycles; and
>
> (E) the number, density, and average mix of housing types that have occurred on the buildable lands described in subsection (4)(a) of this section.

(5)(A)(A) AND (E) AVERAGE DENSITY AND MIX

Subsections (A) and (E) require similar data. Subsection (A) requires the number, density, and average mix of housing types of urban residential development that have actually occurred; while (E) requires the same data but for housing types that have occurred on the buildable lands. The density and mix analysis presented in Chapter 3 of this report is intended to comply

[57] ORS 197.296 (E) The number, density and average mix of housing types that have occurred on the buildable lands described in subsection (4)(a) of this section.

with these two requirements. Exhibit 76 shows the average housing mix of units by type for each zone and net density by type for each zone, and overall by zone and type.

(5)(A)(B) TRENDS IN DENSITY AND AVERAGE MIX OF HOUSING TYPES OF URBAN RESIDENTIAL DEVELOPMENT

Housing mix is the mixture of housing types (e.g., single-family detached, single-family attached, or multifamily) within a city. State law requires a determination of the future housing mix in the community and allows that determination to be based on different periods: (1) the mix of housing built in the past five years or since the most recent periodic review, whichever time period is greater, (2) a shorter time period if the data will provide more accurate and reliable information, or (3) a longer time period if the data will provide more accurate and reliable information (ORS 197.296).

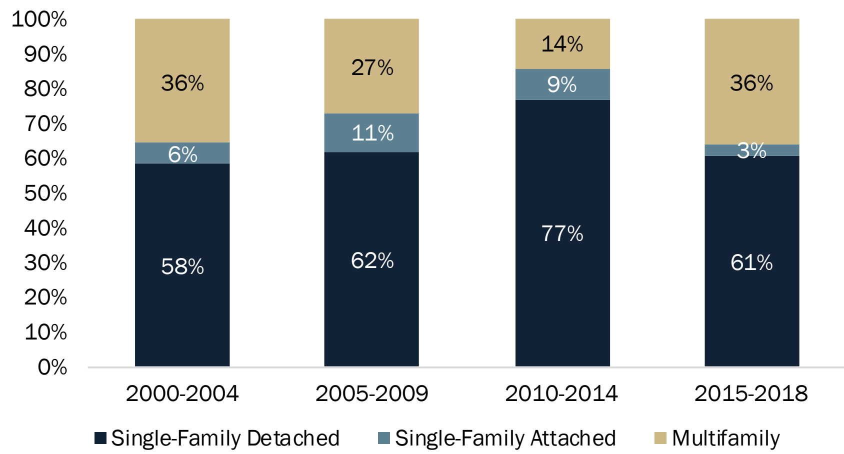
A majority share of new housing built in McMinnville, since 2000, has been single-family detached housing. Since 2015, about 36% of new housing built was multifamily, consistent with trends in the early 2000s. Single-family attached housing has consistently made up a smaller share of new housing built.

Since 2000, single-family detached housing predominated McMinnville's housing market.

Single-family attached housing consistently makes up a smaller share of the housing stock built since 2000.

Exhibit 77. Trends in Housing Mix of New Units, McMinnville, 2000 to July 2018

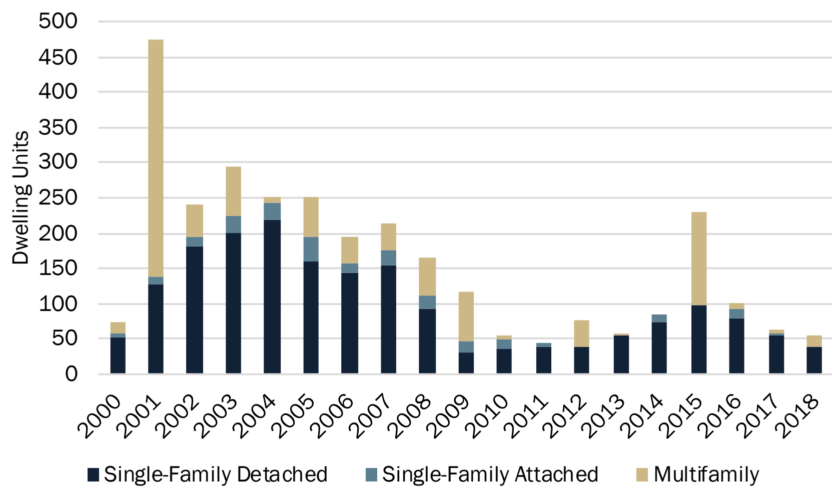
Source: McMinnville Building Permit Database.



Since 2000, 62% of housing permitted in McMinnville was single-family detached, 8% was single-family attached, and 31% was multifamily.

Exhibit 78. Trends in Housing Mix of New Units, McMinnville, 2000 to July 2018

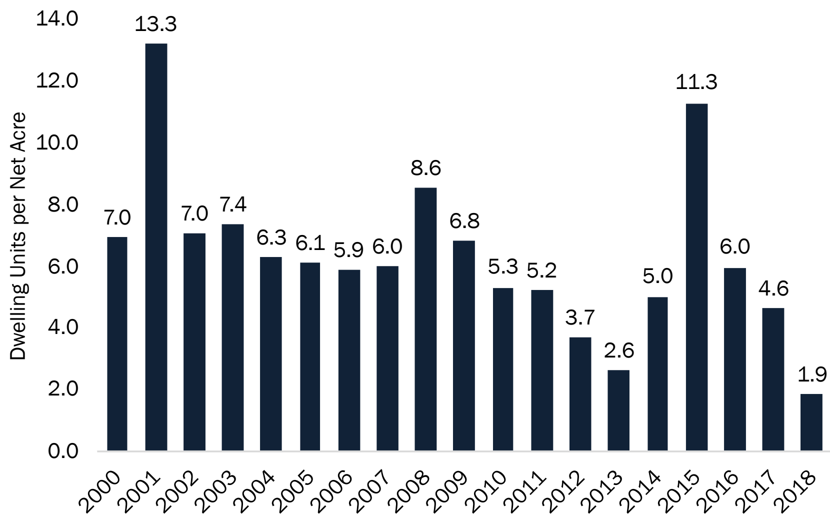
Source: McMinnville Building Permit Database.



Since 2000, McMinnville's average net density was 6.6 dwelling units per net acre.

Exhibit 79. Trends in Net Density of New Units, McMinnville, 2000 to July 2018

Source: McMinnville Building Permit Database. Note: Net density is dwelling units per net acre.



Housing density is the density of residential units by structure type, expressed in dwelling units per net or gross acre. The US Census does not track residential development density, so this study analyzes housing density based on new development between 2000 and July 2018. Consistent with trends observed in other cities, considerable variation exists in residential density from year to year. While housing density averaged around 6.6 dwelling units per net acre since 2000, some years show a spike in density of over 10 dwelling units per net acre. In other years, density dipped below five dwelling units per net acre. Density is affected by many factors—housing type, housing mix, lot configurations, etc. With limited annual permitting, one large multifamily project can considerably change annual density findings (such as in 2001 and 2015).

(5)(A)(C) DEMOGRAPHIC AND POPULATION TRENDS

To understand what will influence McMinnville's housing market, it is important to consider demographic and population trends. The following factors will influence needed mix and density in McMinnville's future:

- Population in McMinnville is growing faster than the State and national average since 1990.
- Population in McMinnville is aging, and the cohort aged 60+ in Yamhill County will increase by about 56% by 2041.
- The share of the population that is Hispanic and Latino is growing faster than County and State averages since 2000. Per the most recent Decennial Census, Latino and Hispanic households were on average 1.5 persons larger.
- Overall, average household size is shrinking and the share of 1-person households in McMinnville has increased since 2000.

- Median household income and median family income is below County and State median incomes.
- While 41% of McMinnville households earn more than 120% of McMinnville's median household income, about 50% of McMinnville households earn less than $50,000 per year, compared to 43% of Yamhill County households.
- From 2017 to 2018, Point-in-Time homelessness increased by 30%.
- In the 2016–2017 school year, 3% of students experienced homelessness in Yamhill County.
- Approximately 13,500 people work in McMinnville, but 60% of those workers commute into McMinnville from other areas.

These trends—coupled with the forecast of new housing in McMinnville's UGB for the 2021 to 2041 period (Exhibit 72)—suggest that, in the future, the need for new housing developed in McMinnville will include housing that is generally more affordable, with some housing located in walkable areas with access to services. Findings additionally suggest that in the future, McMinnville will need high-amenity housing types for the large share of households earning over 120% of McMinnville's median family income. This assumption is additionally based on the following findings in the previous chapters:

- Demographic changes suggest moderate increases in demand for small-lot, small-home detached single-family housing, attached single-family housing, and multifamily housing. The key demographic trends that will affect McMinnville's future housing needs are (1) the aging of Baby Boomers, (2) the aging of Millennials, and (3) the continued growth of the Hispanic and Latino population. Growth of these groups has the following implications for housing need in McMinnville:
  - *Baby Boomers.* Growth in the number of seniors will have the biggest impacts on demand for new housing through demand for housing types specific to seniors, such as assisted-living facilities or age-restricted developments. These households will make a variety of housing choices, including remaining in their homes as long as they are able, downsizing to smaller single-family homes (detached and attached) or multifamily units, moving into age-restricted manufactured home parks (if space is available), or moving into group housing (such as assisted-living facilities or nursing homes) as their health declines. Minor increases in the share of Baby Boomers who downsize to smaller housing will result in increased demand for smaller single-family detached, single-family attached, multifamily, and multigenerational housing types like accessory dwelling units. Some Baby Boomers may prefer housing in walkable neighborhoods with access to services.
  - *Millennials.* Over the next twenty years, Millennial households will continue to grow, but their share of the population will stay stable at about 25% of the population. The aging of Millennials will still result in increased demand for both ownership and rental opportunities, with an emphasis on housing that is

comparatively affordable. Some Millennials may prefer to locate in traditional single-family detached housing, others in town houses or multifamily housing.

   - *The Hispanic and Latino population.* Growth in the number of Hispanic and Latino households will result in increased demand for housing of all types, both for ownership and rentals, with an emphasis on housing that is comparatively affordable. Hispanic and Latino households, particularly those that are foreign-born (11% of McMinnville's population as of 2016) are more likely to be larger than average, often having more children and living in multigenerational households. The housing types that are most likely to be affordable to the majority of Hispanic and Latino households are existing lower-cost single-family housing, single-family housing with an accessory dwelling unit, and multifamily housing.

- About 36% of McMinnville's households are cost burdened. Fifty-two percent of McMinnville's renters are cost burdened, compared to 25% of homeowners. These factors indicate that McMinnville needs more affordable housing types, especially for renters. A household earning median household income (about $50,300) could afford a home roughly valued between $176,000 and $201,000, which is below the current 2018 median sales price for single-family housing in McMinnville (about $349,000).

  McMinnville's share of multifamily housing accounts for about 23% of the City's housing stock. The majority of McMinnville's multifamily buildings are five or more units (73%), indicating few "missing middle" multifamily housing types.

These findings suggest that McMinnville's needed housing mix is for a broader range of housing types than are currently available in McMinnville's housing stock, both for ownership and rent, as well as across the affordability spectrum. McMinnville will need to provide development opportunities over the next twenty years for traditional single-family detached housing, smaller single-family detached housing (e.g., cottages or small-lot single-family detached units), manufactured housing, accessory dwelling units, town houses, duplexes, triplexes, quadplexes, and apartment buildings. McMinnville needs housing across the affordability spectrum from affordable housing (including government-assisted housing) to high-amenity housing.

(5)(A)(D) ECONOMIC TRENDS AND CYCLES

Population growth in Oregon tends to follow economic cycles. Historically, Oregon's economy is more cyclical than the nation's, growing faster than the national economy during expansions and contracting more rapidly than the nation during recessions. Oregon grew more rapidly than the United States in the 1990s (which was generally an expansionary period) but lagged behind the United States in the 1980s. Oregon's slow growth in the 1980s was primarily due to the nationwide recession early in the decade. As the nation's economic growth slowed during 2007, Oregon's population growth began to slow.

Despite this, McMinnville has grown at an average annual growth rate of 2.4% since 1990, faster than the nation, State, and County (1.0%, 1.4%, 1.8%). Migration is the largest component of

population growth in McMinnville. From 2000 to 2016, 67% of Yamhill County's new population (13,477 people) was a result of migration. According to the Joint Center for Housing Studies of Harvard, immigration will continue to play a role in accelerating growth in the coming years unless affected by macro-politics.

Building activity had not picked up since the recession, until the past three to five years. McMinnville is experiencing pent-up demand for housing, and competition has grown. As a result of increased housing costs and competition, McMinnville is experiencing a decrease in first-time homebuyers due to limited options and competition from wealthier households.

Housing instability is increasing in McMinnville, fueled by an unsteady and low-opportunity employment market. As of 2019, the minimum wage in Oregon was $11.25 (an annual salary of $23,400, or about 47% of median family income in McMinnville). A household must earn at least $25.58 per hour to afford a two-bedroom unit in Yamhill County at fair market rent. Wages in Oregon remain below the national average, but they are at its highest point relative to the early 1980s. The Office of Economic Analysis reports that new Oregon Employment Department research "shows that median hourly wage increase for Oregon workers since 2014 has been 3.1 percent annually for the past three years."[58] These wage increases are "substantially stronger for the Oregonians who have been continually employed over the last three years."[59]

By the end of 2018, the OEA forecasts 41,700 jobs will be added to Oregon's economy. This is an approximate annual growth of 2.2% in total nonfarm employment relative to 2017 levels.[60] The leisure and hospitality, construction, professional and business services, and health services industries are forecasted to account for well over half of the total job growth in Oregon for 2018. Oregon continues to have an advantage in job growth compared to other states, due to its industrial sector and in-migration flow of young workers in search of jobs. This information explains that, as the housing market continues to recover, and as Oregon's economy improves, Oregon will likely see an increase in household formation rates. Yamhill County and McMinnville will be affected by these state trends, which will result in continued demand for new houses.

[58] Office of Economic Analysis, "Oregon Economic and Revenue Forecast," 38(3), September 2018. https://www.oregon.gov/das/OEA/Documents/forecast0918.pdf.

[59] *Ibid*.

[60] *Ibid*.

Housing Forecast by Housing Type

The Project Advisory Committee recommended that Scenario 2 needed a housing mix assumption to inform the housing forecast by housing type (see Appendix B for a description of each scenario). The recommendation is presented below. The basis for the determination of needed housing mix in McMinnville is the demographic trends suggesting continued demand for a wider variety of housing types as well as the following assumptions:

- McMinnville's official forecast for population growth shows that the City will add 11,260 people over the 20-year period. This new population will result in the need for 4,657 new dwelling units over the 20-year period.
- The recommended mix assumption for McMinnville's needed housing mix was Scenario 2:
  - 55% of new housing will be single-family detached, a category which includes manufactured housing, accessory dwelling units, and cottage clusters. In the 2013–2017 period, 68% of McMinnville's total existing housing stock was single-family detached.
  - 12% of new housing will be single-family attached. In the 2013–2017 period, 9% of McMinnville's total existing housing stock was single-family attached.
  - 33% of new housing will be multifamily, a category which includes redevelopment. In the 2013–2017 period, 23% of McMinnville's total existing housing stock was multifamily.

McMinnville will have demand for 4,657 new dwelling units over the 20-year period, 55% of which will be single-family detached housing.

Exhibit 80. Forecast of Demand for New Dwelling Units by Type, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest. Note: DU is dwelling unit.

Variable	Needed Mix
Needed new dwelling units (2021-2041)	4,657
Dwelling units by structure type	
Single-family detached	
Percent single-family detached DU	**55%**
equals Total new single-family detached DU	2,561
Single-family attached	
Percent single-family attached DU	**12%**
equals Total new single-family attached DU	559
Multifamily	
Percent multifamily	**33%**
equals total new multifamily	1,537
Total new dwelling units (2021-2041)	4,657

This analysis accounts for units accommodated through infill and redevelopment of land classified as "developed." Results and assumptions are documented below.

- **Infill and Redevelopment.** Infill (which includes accessory dwelling units) and redevelopment is development that occurs on fully developed lots; the property owner may add additional units to the property or demolish the dwelling unit(s) that are already in place to build one or more units on the property. The McMinnville Project Advisory Committee recommended assumption for infill and redevelopment is 8%. For the 2021 to 2041 period, we assume 8% of new housing will be accommodated through infill and redevelopment. This results in 373 units that will be accommodated through infill and redevelopment.

Over the 20-year period, McMinnville will accommodate 373 needed units through infill and redevelopment (approximately 19 units per year).

Exhibit 81. Forecast of Demand for Infill and Redevelopment, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest.

Variable	New Dwelling Units (2021-2041)
New units accomodated through infill and redevelopment	373
Subset of total new dwelling units (2021-2041)	373

Over the 20-year period, McMinnville will accommodate 373 needed new units through infill (including accessory dwelling units) and redevelopment.

This results in McMinnville having demand for 4,284 new dwellings units on vacant or partially vacant land.

Exhibit 82. Forecast of Demand for New Dwelling Units on Vacant and Partially Vacant Lands, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest. Note: DU is dwelling unit.

Variable	Needed Mix
DUs Accomodated by Infill or Redevelopment	
Single-family detached	37
Single-family attached	
Multifamily	335
Total Units in Infill or Redevelopment	373
DUs Requiring Vacant / Partially Vacant Unconstrained Land	
Single-family detached	2,524
Single-family attached	559
Multifamily	1,202
Total DUs Requiring Vacant or Partially Vacant Land	4,284

To summarize Exhibit 80, Exhibit 81, and Exhibit 82, McMinnville will have demand for 4,657 new dwelling units over the 20-year period. Of these 4,657 dwelling units, 2,561 dwelling units are forecast to be single-family detached housing and 1,537 are forecast to be multifamily housing (see Exhibit 80). After accounting for the 373 forecasted units accommodated by infill and redevelopment (Exhibit 81), McMinnville will have demand for 2,524 single-family detached units on vacant or partially vacant land and 1,202 multifamily units on vacant or partially vacant land (Exhibit 82). Exhibit 83 presents a summary.

Exhibit 83. Summary of Resulting Mix of Units on Vacant and Partially Vacant Land, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest.

Housing Type	Total Needed Dwelling Units		Dwelling Units Accomodated by Infill & Redevelopment On Developed Land			Dwelling Units Requiring Vacant / Partially Vacant Land		
	#	%	#	% of Total Needed Units	% of Infill / Redeveloped Units	#	% of Total Needed Units	% of Units of V / PV Land
Single-Family Detached	2,561	55%	37	1%	10%	2,524	54%	59%
Single-Family Attached	559	12%	-	0%	0%	559	12%	13%
Multifamily	1,537	33%	335	7%	90%	1,202	26%	28%
Total	4,657	100%	373	8%	100%	4,284	92%	100%

Redevelopment typically involves the replacement of one or more units with a larger number of units. Multifamily is a reasonable assumption for redevelopment, as it matches historical redevelopment trends in McMinnville. Redevelopment has historically not occurred as single-family attached housing in McMinnville. Infill (which includes accessory dwelling units [ADUs]) may be attached or detached, but they have characteristics of multifamily housing. ADUs do not have separate fee simple ownership—ownership is not separate from the primary dwelling unit—similar to a duplex or other multifamily housing product. Single-family detached infill is likely to entail small partitions of small lots classified as developed with limited remaining capacity based on zoning.

The needed mix for new dwelling units is 55% single-family detached housing, 12% single-family attached housing, and 33% multifamily housing. However, once dwelling units that are accommodated by infill/redevelopment are removed, the adjusted housing mix for housing requiring vacant/partially vacant land is 59% single-family detached housing, 13% single-family attached housing, and 28% multifamily housing.

Exhibit 84 though Exhibit 86 replicate the forecast of demand for new dwelling units (including infill/redevelopment) for housing demand in the 5-, 10-, 20-, and 46-year planning horizons.

Exhibit 87 through Exhibit 89 replicate the forecast for demand for new dwelling units (including infill/redevelopment) for housing growth between 2018 and 2021.

McMinnville allows the following types of housing in zoning districts:

- **R-1 Single-Family Residential** will primarily accommodate new single-family detached housing, with some opportunities for single-family attached housing and duplexes on corner lots.
- **R-2 Single-Family Residential** will accommodate a mixture of new single-family detached and single-family attached housing, as well as duplexes on corner lots.
- **R-3 Two-Family Residential** will accommodate a mixture of new single-family detached and single-family attached housing, as well as duplexes.
- **R-4 Multifamily Residential** will accommodate single-family detached and attached housing, as well as duplexes and multifamily housing.
- **O-R Office/Residential** will accommodate single-family detached and attached housing, as well as duplexes and multifamily housing.
- **Residential Plan Designations with County Zoning**[61] will accommodate single-family detached and single-family attached units, duplexes, and multifamily units.
- **C-3 General Commercial** will accommodate multifamily housing.

This analysis assumes that housing types will locate in zones that permit the dwelling unit outright. The City of McMinnville will be implementing Great Neighborhood Principles, which may affect the location and distribution of the dwelling units. Current zoning practices separate dwelling units by type and zoning district. If the principles are implemented, the same average mix and average density could be achieved, but in a different configuration that is consistent with the principles.

Needed Density

ORS 197.296(7) requires cities to "determine the overall average density and overall mix of housing types at which residential development of needed housing types must occur in order to meet housing needs over the next 20 years." This section describes historic residential densities and needed residential densities for McMinnville's planning period. Appendix B presents the scenario model that was presented to the Project Advisory Committee, which informed their recommendation for needed residential densities.

Densities in this section are presented in net acres and converted to gross acres[62] to account for land needed for rights-of-way. Rights-of-way conversion factors are based on empirical analysis of existing rights-of-way by zone in McMinnville. For example, when developing a new area

[61] Residential plan designations with county zoning are lands with the City's residential plan designation and county rural zoning that will need to be rezoned to urban zones prior to development.

[62] OAR 660-024-0010(6) defines net buildable acre as land that "consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads." While the administrative rule does not include a definition of a gross buildable acre, using the definition above, a gross buildable acre will include areas used for rights-of-way for streets and roads. Areas used for rights-of-way are considered unbuildable.

such as a subdivision, it is necessary to account for land needed for roads, sidewalks, on-street parking, etc., which requires a gross density estimate. The conversion from net acres to gross acres in this analysis is based on the average amount of land in rights-of-way throughout the McMinnville UGB by zone.[63]

Analysis of Historic Densities

ECONorthwest analyzed building permit data to determine historic densities. Exhibit 90 presents the assessment of historic densities for housing built in McMinnville over the 2000 to July 2018 period.

- **R-1 Single-Family Residential:** 4.1 dwelling units per net acre, with 24% of land used for rights-of-way, results in a gross density of 3.1 dwelling units per gross acre.
- **R-2 Single-Family Residential:** 5.8 dwelling units per net acre, with 26% of land used for rights-of-way, results in a gross density of 4.3 dwelling units per gross acre.
- **R-3 Two-Family Residential:** 6.8 dwelling units per net acre, with 29% of land used for rights-of-way, results in a gross density of 4.8 dwelling units per gross acre.
- **R-4 Multiple-Family Residential:** 7.9 dwelling units per net acre, with 23% of land used for rights-of-way, results in a gross density of 6.1 dwelling units per gross acre.
- **O-R Office/Residential:** 7.6 dwelling units per net acre, with 17% of land used for rights-of-way, results in a gross density of 6.3 dwelling units per gross acre.
- **Residential Plan Designations with County Zoning:** an assumed 6.6 dwelling units per net acre (of which the basis is the overall average density achieved in 2000–2018), with 25% of land used for rights-of-way, results in a gross density of 4.3 dwelling units per gross acre. The 25% factor is an average of all other rights-of-way conversion factors from each zone.
- **C-3 General Commercial:** 31.2 dwelling units per net acre, with 30% of land used for rights-of-way, results in a gross density of 21.8 dwelling units per gross acre.

[63] The assumptions about land needed for rights-of-way is based on the historical percentages of land needed for rights-of-way, from empirical analysis of the 2021 McMinnville Buildable Lands Inventory.

Exhibit 90. Historical Densities and Land for Rights-of-Way by Zone for Housing Built in the McMinnville UGB, 2000 through July 2018
Source: Calculations by ECONorthwest. Note 1: DU is dwelling unit. Note 2: Density listed for county zoning is historic average.

Zoning Districts	Average Net Density (DU/Net Acre)	Percentage for Rights-of-Way	Average Gross Density (DU/Gross Acre)
R-1 Single Family Residential	4.1	24%	3.1
R-2 Single Family Residential	5.8	26%	4.3
R-3 Two Family Residential	6.8	29%	4.8
R-4 Multiple-Family Residential	7.9	23%	6.1
O-R Office/Residential	7.6	17%	6.3
C-3 General Commercial	31.2	30%	21.9
County Zoning	6.6	25%	4.9
Average	**6.6**	**25%**	**4.9**

Exhibit 91. Historical Densities and Land for Rights-of-Way by Housing Type for Housing Built in the McMinnville UGB, 2000 through July 2018
Source: Calculations by ECONorthwest. Note: DU is dwelling unit.

Housing Type	Average Net Density (DU/Net Acre)	Percentage for Rights-of-Way	Average Gross Density (DU/Gross Acre)
Single-Family Detached	4.8	25%	3.6
Single-Family Attached	12.3	25%	9.3
Multifamily	18.2	25%	13.7
Total	**6.6**	**25%**	**4.9**

The average density observed in the 2002 McMinnville Housing Needs Analysis was 5.9 dwelling units per net acre. The density analysis in the 2002 HNA was based on permit data between 1988 and 2000. The net density observed for the 2000 through 2018 period was 6.6 dwelling units per net acre—a 12% increase in actual density. This increase in land-use efficiency saved 55 net acres during the 2000–2018 period.

Final Results: Needed Density

The assessment of needed densities was based on the five factors stated in ORS 197.296(5), discussed in greater detail in the previous subsection as well as McMinnville's historical residential densities (2000 to July 2018).

Needed densities over the planning period will be driven by the recommended housing mix assumption. The PAC recommended a housing mix that increased the share of multifamily housing and single-family attached housing and decreased the share of single-family detached housing compared to the mix of new development that occurred between 2000 and 2018. If single-family detached, single-family attached, and multifamily housing develop at densities consistent with historic average densities (4.9 dwelling units per gross acre), McMinnville's overall residential density will increase to 5.3 dwelling units per gross acre over the twenty-year planning period—an 8% increase in gross residential density.

This document is a baseline analysis. The density results are based on McMinnville's current zoning and land-use regulations. Efficiency measures enacted as part of the housing strategy could affect final density.

Needed Housing by Income Level

The next step in the housing needs analysis is to develop an estimate of needed housing by income and housing type. This requires an estimate of the income distribution of current and future households in the community. The estimates presented in this section are based on (1) secondary data from the Census, and (2) analysis by ECONorthwest.

This analysis is based on American Community Survey data about income levels of existing households in McMinnville. Income is categorized into market segments using McMinnville's median household income (MHI) of $50,300. The analysis uses current household income distribution, assuming that approximately the same percentage of households will be in each market segment in the future.

Twenty-two percent of McMinnville's future households will have incomes at or below 50% of McMinnville's median household income (MHI).

Thirty-six percent will have incomes between 50% and 120% of McMinnville's MHI.

Forty-one percent will have incomes greater than 120% of McMinnville's MHI.

Source: US Department of Housing and Urban Development and US Census Bureau, 2012–2016 ACS Table 19001 and B25119.

Market Segment by Income	New Households				% of Households
	5-Year (2021 to 2026)	10-Year (2021 to 2031)	20-Year (2021 to 2041)	46-Year (2021 to 2067)	
High Income (>120% of MFI)	471	955	1,930	4,552	41%
Middle Income (80-120% of MFI)	242	491	992	2,340	21%
Low Income (50-80% of MFI)	176	356	719	1,697	15%
Very Low Income (30-50% of MFI)	124	251	507	1,196	11%
Extremely Low Income (<30% of MFI)	124	253	509	1,200	11%
Total New Households	1,137	2,306	4,657	10,985	100%

Need for Government-Subsidized, Farmworker, and Manufactured Housing

ORS 197.303, 197.307, 197.312, and 197.314 requires cities to plan for government-subsidized housing, manufactured housing on lots, and manufactured housing in parks.

- **Government-subsidized housing.** Government subsidies can apply to all housing types (e.g., single-family detached, single-family attached, and multifamily). McMinnville allows development of government-assisted housing in all residential zones, with the same development standards for market-rate housing. This analysis assumes that McMinnville will continue to allow government housing in all of its residential zones. Because government-assisted housing is similar in character to other housing (with the exception being the subsidies), it is not necessary to develop separate forecasts for government-subsidized housing.
    - Homelessness is a growing concern in McMinnville and Yamhill County. Between 2017 and 2018, homelessness grew by about 30% in Yamhill County. To alleviate this issue, government subsidized housing (including shelters) is needed for individuals and households earning 0% to 30% of McMinnville's median household income (less than $15,000 per year). While a separate forecast for government-subsidized housing is not needed, the City may need to exert specialized effort in planning for shelters and other housing types that will meet the needs of those at risk of homelessness or who are experiencing homelessness.
- **Farmworker housing.** Farmworker housing can also apply to all housing types, and the City allows development of farmworker housing in all residential zones with the same development standards as market-rate housing. This analysis assumes that McMinnville will continue to allow farmworker housing in all of its residential zones. Because it is similar in character to other housing (with the possible exception of government subsidies, if population restricted), it is not necessary to develop separate forecasts for farmworker housing.

- **Manufactured housing on lots.** McMinnville allows manufactured homes on lots in the R-1 and R-2 zones, which are the zones where single-family detached housing is allowed. McMinnville also allows single-family detached housing in R-3, R-4, and O-R zones, but manufactured housing on lots are not permitted in those zones. McMinnville does not have special siting standards for manufactured homes on lots, so it is not necessary to develop separate forecasts for manufactured housing on lots.

- **Manufactured housing in parks.** OAR 197.480(4) requires cities to inventory the mobile home or manufactured dwelling parks sited in areas planned, zoned, or generally used for commercial, industrial, or high-density residential development. According to the Oregon Housing and Community Services Manufactured Dwelling Park Directory,[64] McMinnville has twelve manufactured home parks within the UGB, with 1,014 spaces. One manufactured park (separate from manufactured housing subdivision) is within the O-R zone, two are within the C-3 zone, four are within the R-3 zone, and five are within the R-4 zone.

  ORS 197.480(2) requires McMinnville to project need for mobile home or manufactured dwelling parks based on (1) population projections, (2) household income levels, (3) housing market trends, and (4) an inventory of manufactured dwelling parks sited in areas planned, zoned, or generally used for commercial, industrial, or high-density residential development.

  - The housing forecast showed that McMinnville will need 4,657 dwelling units over the 2021 to 2041 period.
  - Analysis of housing affordability shows that about 22% of McMinnville's new households will be extremely low income or very low income, earning 50% or less of McMinnville's median family income. One type of housing affordable to these households is manufactured housing.
  - Manufactured housing in parks accounts for about 8% (about 1,014 dwelling units) of McMinnville's current housing stock.
  - National, State, and regional trends since 2000 showed that manufactured housing parks were closing, rather than being created. For example, between 2000 and 2015, Oregon had 68 manufactured parks close, with more than 2,700 spaces. Discussions with several stakeholders familiar with manufactured home park trends suggest that over the same period, few to no new manufactured home parks have opened in Oregon.

---

[64] Oregon Housing and Community Services, "Oregon Manufactured Dwelling Park Directory." http://o.hcs.state.or.us/MDPCRParks/ParkDirQuery.jsp

- Households most likely to live in manufactured homes in parks are those with incomes between about $15,000 and $25,150 (30% to 50% of McMinnville's median household income), which includes 11% of McMinnville's households. However, households in other income categories may also live in manufactured homes in parks.

  Manufactured home park development is an allowed use in the R-3 and R-4 zone. The national and State trends of manufactured home park closures, and the fact that no new manufactured home parks have opened in Oregon in over the last fifteen years, demonstrate that development of new manufactured home parks in McMinnville is unlikely.

  Our conclusion from this analysis is that development of new manufactured home parks in McMinnville over the 2021 to 2041 planning period is unlikely. It is, however, likely that manufactured homes will continue to locate on individual lots in McMinnville. The forecast of housing assumes that no new manufactured home parks will be opened in McMinnville over the 2021 to 2041 period. The forecast includes new manufactured homes on lots in the category of single-family detached housing.

- Over the next twenty years (or longer) one or more manufactured home parks may close in McMinnville as a result of manufactured home park landowners selling or redeveloping their land for uses with higher rates of return, rather than lack of demand for spaces in manufactured home parks. Manufactured home parks contribute to the supply of low-cost affordable housing options, especially for affordable homeownership.

  While there is statewide regulation of manufactured home park closures designed to lessen the financial difficulties of this closure for park residents,[65] the City has a role to play in ensuring that there are opportunities for housing for the displaced residents. The City's primary role is to ensure that there is sufficient land zoned for new multifamily housing, or other housing meeting the same need, and to reduce barriers to residential development to allow for development of new, relatively affordable housing. The City may use a range of policies to encourage development of relatively affordable housing, such as allowing a wider range of moderate-density housing (e.g., cottages or missing-middle housing types) in the R-1 and R-2 zones, designating more land for multifamily housing, removing barriers to multifamily housing development, using tax credits to support affordable housing production, developing an inclusionary

[65] ORS 90.645 regulates rules about closure of manufactured dwelling parks. It requires that the landlord give at least one year's notice of park closure and pay the tenant between $5,000 to $9,000 for each manufactured dwelling park space, in addition to not charging tenants for demolition costs of abandoned manufactured homes.

zoning policy, or partnering with a developer of government-subsidized affordable housing.

Other Needs

This section includes needs for special housing, land to accommodate households before 2021, and other uses on residential land.

Need for Special Housing

Need for special housing, such as transitional housing to provide services in conjunction with housing, is accounted for in total numbers; however, the housing strategy can discuss opportunities to ensure codes are responsive to planning that should address opportunities for providers of transitional housing and services within the broader planning context.

Need for Households Locating in McMinnville before 2021

The Portland State University population forecast shows growth of about 1,480 people between 2018 and 2021, resulting in a need for 612 new dwelling units.[66] After deducting dwelling units accommodated by infill and redevelopment (8% or 49 units), McMinnville needs to accommodate 563 new dwelling units on vacant or partially vacant lands before 2021. To accommodate the 563 dwelling units at historic densities,[67] it is expected that the market would consume about 115 gross acres of existing buildable land before 2021. In 2021, the City of McMinnville could update their buildable lands inventory to deduct the actual amount of land consumed prior to 2021 from the inventory.

Need for Other Uses on Residential Land

The residential land needs analysis and capacity analysis accounts for land that will be needed for new streets within residential areas by applying a net-to-gross-buildable-acreage factor and density factor.

However, the housing needs analysis and residential land needs analysis don't account for other uses that will occur on lands planned and zoned for residential use. The City has initiated an urbanization study with a broader scope that will evaluate the capacity of the UGB to meet needs for all uses during the planning period. That analysis will identify forecast demand for other uses expected to occur on residential land. These can include uses such as schools, parks,

[66] According to Portland State University's Population Research Center, McMinnville UGB had 34,293 people in 2017. ECONorthwest extrapolated the population in 2017 to 34,758 people in 2018. McMinnville UGB forecasted that the population in 2021 will be 36,238 people (Exhibit 29), resulting in 1,480 new people between 2018 and 2021. Using the assumptions presented in Exhibit 75, McMinnville will have demand for approximately 612 new dwelling units between 2018 and 2021.

[67] McMinnville's average overall residential density between 2000 and July 2018 was 6.6 dwelling units per net acre and 4.9 dwelling units per gross acre.

public facilities, etc. Some of these have critical locational siting requirements in proximity to population as part of a public facilities system.

Once this portion of the urbanization study has been completed, the additional demand for residential land will be factored into the sufficiency determination to calculate the extent of deficit.

Because the need for other uses on residential land has not yet been determined, Chapter 6 addressed only the residential land need for housing before 2021.

6. Residential Land Sufficiency within McMinnville

This chapter presents an evaluation of the sufficiency of vacant residential land in McMinnville to accommodate expected residential growth over the 2021 to 2041 period. This chapter includes an estimate of residential development capacity (measured in new dwelling units) and an estimate of McMinnville's ability to accommodate needed new housing units for the 2021 to 2041 period based on the analysis in the housing needs analysis. The chapter ends with a discussion of the conclusions and recommendations for the housing needs analysis. This section also presents the final land-sufficiency results for McMinnville for the 5-, 10-, and 46-year planning periods.

Statutory Guidance

The language of Goal 10[68] and ORS 197.296[69] refers to housing need: it requires communities to provide needed housing types for households at all income levels. Goal 10's broad definition of need covers all households—from those with no home to those with second homes. McMinnville is required to make a local housing needs projection[70] that determines the needed mix of housing types and densities that are (1) consistent with the financial capabilities of present and future area residents of all income levels during the planning period, (2) consistent with adopted housing standards, and (3) consistent with requirements of Goal 10, Goal 14[71], OAR 660-008,[72] and ORS 197.296.

With a population over 25,000, McMinnville is subject to the provisions of ORS 197.296, which provide additional guidance on determining housing need. Specifically, ORS 197.296(5) requires that cities consider five factors in determining needed density and mix. These factors are discussed in detail in Chapter 5.

The final determination of needed mix and density was:

- **Needed Housing Mix:** 55% single-family detached housing, 12% single-family attached housing, and 33% multifamily housing
- **Needed Housing Density:** 5.3 dwelling units per gross acre (average overall)

Residential Capacity Analysis

The buildable lands inventory provides a supply analysis (buildable land by type), and the housing needs analysis provided a demand analysis (population growth leading to demand for more residential development). The comparison of supply and demand allows the determination of land sufficiency.

There are two ways to get estimates of supply and demand into common units of measurement so that they can be compared: (1) housing demand can be converted into acres, or (2) residential land supply can be converted into dwelling units. A complication of either approach is that not all land has the same characteristics. Factors such as zone, slope, parcel size, and shape can all affect the ability of land to accommodate housing. Methods that recognize this fact are more robust and produce more realistic results. This analysis uses the second approach: it estimates the ability of vacant residential lands within the UGB to accommodate new housing. This analysis, sometimes called a "capacity analysis,"[73] can be used to evaluate different ways that vacant residential land may build out by applying different assumptions. The process is to estimate capacity based on historic densities and then to evaluate land-use efficiency measures that would achieve housing needs.

McMinnville Capacity Analysis Results

The capacity analysis estimates the development potential of vacant and partially vacant residential land to accommodate new housing. We base our analysis on several assumptions:

- **Buildable residential land.** The capacity estimates start with the number of buildable acres in the residential plan designations and residential zones.
- **Water Zone 1 and Water Zone 2 land.** Land in Water Zone 1 is available to be serviced with water now. Based on discussions with McMinnville Water & Light, land in Water Zone 2 will likely not be serviced with water for approximately ten years.
- **Capacity in C-3.** Previous findings in McMinnville's 2013 Economic Opportunities Analysis suggests a deficit of land in C-3 areas needed for commercial uses. For this reason, this analysis assumed no residential capacity on current C-3 areas after 2021. The average historic density calculations of 4.9 dwelling units per gross acre include the densities achieved in the C-3 zone, which could be achieved by rezoning county land to achieve average needed densities.

[73] There is ambiguity in the term "capacity analysis." It would not be unreasonable for one to say that the capacity of vacant land is the maximum number of dwellings that could be built based on density limits defined legally by plan designation or zoning, and that development usually occurs—for physical and market reasons—at something less than full capacity. For that reason, we have used the longer phrase to describe our analysis: "Estimating how many new dwelling units the vacant residential land in the UGB is likely to accommodate." That phrase is, however, cumbersome, and it is common in Oregon and elsewhere to refer to that type of analysis as capacity analysis, so we use that shorthand occasionally in this memorandum.

- **Residential demand in unincorporated areas with city residential plan designation and county rural zoning.** These lands are not available to develop at urban densities until they annex. For this reason, some of the analysis provides subtotals for city and county zoned lands separately in the calculations. This method allows ECONorthwest to calculate overall land needs (surpluses and deficits) under the assumption that these lands will be available once annexed over during the planning period.
- **Needed densities.**[74] The analysis models capacity at both historic and needed densities. The rationale and factual basis for the density assumptions is ORS 197.262(5), described in the previous section. In essence, the population is growing, and households are increasingly housing insecure due to rising housing costs and increased competition from wealthier households migrating into the jurisdiction. Since 2000, a majority of new housing developed in McMinnville has been single-family detached housing at prices that are unaffordable to many households in the region. In addition to these factors, as residents in McMinnville age, there will be more demand for smaller units. McMinnville will need a larger share of single-family attached and multifamily housing than the community had in the past, which will result in higher densities.

Exhibit 94. Unconstrained Vacant and Partially Vacant Buildable Land (Water Zone 1 and 2) with Baseline Capacity, McMinnville UGB, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. Note1: DU is dwelling unit. Note2: The density of county zoned land is the historic average density achieved (4.9 du/gross acre).

Zoning Districts	Total Unconstrained Buildable Acres *(Water Zone 1 & 2)*	Density Assumption (DU/Gross Acre)	Capacity (Dwelling Units)
R-1 Single Family Residential	145	3.1	449
R-2 Single Family Residential	131	4.3	561
R-3 Two Family Residential	6	4.8	28
R-4 Multiple-Family Residential	21	6.1	127
O-R Office/Residential	0	6.3	3
C-3 General Commercial	61	21.9	-
County Zoning	358	4.9	1,753
TOTAL	**721**	**4.1**	**2,921**

Exhibit 94 shows that McMinnville has 721 acres of unconstrained buildable lands, (approx. 660 acres in residential zones are assigned residential capacity), with capacity for 2,921 dwelling units using historical densities by zoning district (before deducting acreage for housing development between 2018 and 2021). Exhibit 95 shows that McMinnville has 588 acres of

[74] This document is a baseline analysis. The density results are based on McMinnville's current zoning and land-use regulations. Efficiency measures enacted as part of the housing strategy could affect final density.

unconstrained buildable lands in Zone 1,[75] with capacity for 2,360 dwelling units (before deducting acreage for housing development between 2018 and 2021 and by using historical densities by zoning district).

Exhibit 95. Unconstrained Vacant and Partially Vacant Buildable Land (Water Zone 1) with Baseline Capacity, McMinnville UGB, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. Note1: DU is dwelling unit. Note2: The density of county zoned land is the historic average density achieved (4.9 du/gross acre).

Zoning Districts	Total Unconstrained Buildable Acres *(Water Zone 1)*	Density Assumption (DU/Gross Acre)	Capacity (Dwelling Units)
R-1 Single Family Residential	109	3.1	338
R-2 Single Family Residential	86	4.3	368
R-3 Two Family Residential	6	4.8	28
R-4 Multiple-Family Residential	21	6.1	127
O-R Office/Residential	0	6.3	3
C-3 General Commercial	61	21.9	-
County Zoning	305	4.9	1,496
TOTAL	**588**	**4.0**	**2,360**

Note: All housing development occurring between 2018 and 2021 is assumed to be in Water Zone 1 as Water Zone 2 will not be serviceable during that time. The report presents this deduction in the following sub-section.

[75] The analysis assumes that Zone 2 acreage is available within the 20-year period planning period, but not before the 10-year period.

Residential Land Sufficiency in McMinnville

The next step in the analysis of the sufficiency of residential land within McMinnville's UGB is to compare the demand for housing with the capacity of land. This analysis is partially based on capacity of land by existing zoning and plan designations. It is a baseline analysis. Land-sufficiency results may change based on implementation of actions in the housing strategy, including implementation of McMinnville's Great Neighborhood Principles.

This section presents the land-sufficiency results for McMinnville for several periods:

- 5-year period (2021–2026)
- 10-year period (2021–2031)
- 20-year period (2021–2041)
- 46-year period (2021–2067)

Notes about the final results:

- Results incorporate assumptions for land needed to accommodate new population and housing between 2018 and 2021.[76]
- Results reflect demand for new dwelling units which require vacant and partially vacant lands.[77]

These estimates provide context for consumption of McMinnville's remaining buildable residential lands. For the purpose of the UGB, only the 2021–2041 estimates are relevant.

Exhibit 96 shows the capacity for each planning period in 2018 and in 2021, with subtotals for capacity within Water Zones 1 and 2. It shows the number of new dwelling units needed on vacant and partially vacant lands, and the resulting surplus / deficit of dwelling units and acreage (with calculations for both historic and needed density).

As discussed above, these calculations are based on average densities. Rezoning land may be required to have sufficient lands zoned to achieve the specified capacity. Because zoning may change, or because a diverse housing zone may be implemented, capacity and acreage are calculated without assignment to specific zones. The 563 dwelling units needed between 2018-2021 will need about 115 acres at McMinnville's historic density of 4.9 du/gross acre.

[76] This section approximates the number of vacant and partially vacant buildable acres in 2021 (2021 Buildable Land Inventory). Each planning period begins with the 2021 capacity.

[77] Forecasted demand for infill and redevelopment will not require vacant or partially vacant lands.

Exhibit 96. Comparison of Capacity of Existing Residential Land with Demand for New Dwelling Units and Land Surplus or Deficit, McMinnville UGB, for the periods through 2026, 2031, 2041, and 2067

Source: Buildable Lands Inventory; Calculations by ECONorthwest. Note1: DU is dwelling unit. Note2: The 2,360 DU capacity total includes 864 DUs in City Limits and 1,496 DUs in the county. Note3: The 2,921 DU capacity total includes 1,168 DUs in City Limits and 1,753 DUs in the county.

	Planning Period			
	5-Year (2021 to 2026)	10-Year (2021 to 2031)	20-Year (2021 to 2041)	46-Year (2021 to 2067)
2018 Capacity (DUs)				
Water Zone 1	2,360	2,360	2,360	2,360
Water Zone 2	NA	NA	561	561
Total	**2,360**	**2,360**	**2,921**	**2,921**
2018-2021 Demand (DUs on buildable land)	563	563	563	563
2021 Capacity (DUs)				
Water Zone 1	1,797	1,797	1,797	1,797
Water Zone 2	NA	NA	561	561
Total	**1,797**	**1,797**	**2,358**	**2,358**
Post-2021 Demand (DUs on buildable land)	1,045	2,121	4,284	10,107
Surplus/Deficit at Horizon Year (Dus)	752	(324)	(1,926)	(7,749)
Capacity Based on Land in Water Zone:	*1*	*1*	*1&2*	*1&2*
Surplus/Deficit @ 4.9 du/ac (hist), gross acres	153	(66)	(393)	(1,581)
Surplus/Deficit @ 5.3 du/ac (need), gross acres	142	(61)	(363)	(1,462)
Difference, gross acres	12	(5)	(30)	(119)

Conclusions

McMinnville's UGB is forecast to grow from 36,238 people in 2021 to 47,498 people in 2041, an increase of 11,260 people. This population growth will occur at an average annual growth rate of 1.36%. In addition to population growth, McMinnville's households have grown smaller on average. After considering a number of factors, including household size and residential vacancy rates, McMinnville will have demand for about 4,657 new dwelling units over the 20-year planning period (2021 to 2041). McMinnville will have demand for about 1,136 new dwelling units for the 5-year period between 2026 and 2031, about 2,305 new dwelling units for the 10-year period between 2021 and 2031, and about 10,986 new dwelling units for the 46-year period between 2021 and 2067.

McMinnville will need to accommodate an average development trajectory of 233 new dwelling units annually over the 20-year planning horizon. Over the 20-year planning period, McMinnville will accommodate 373 needed dwelling units through redevelopment and infill—these units will not require vacant or partially vacant lands. Accordingly, this will result in McMinnville needing to accommodate 4,284 needed new dwelling units on vacant and partially vacant buildable residential lands.

In the future, McMinnville will plan for an increased share of single-family attached dwelling units and multifamily units to meet the City's housing needs. Currently, about 68% of McMinnville's housing stock is single-family detached housing, 9% is single-family attached housing, and 23% is multifamily housing. Based on Project Advisory Committee recommendations, McMinnville will plan for a different mix in new housing, which will result in a slight change to McMinnville's aggregate overall mix of existing and new housing. McMinnville will plan for a decrease in share of single-family detached housing (55% of new housing stock) to provide opportunities for more single-family attached housing (12% of new housing) and multifamily housing (33% of new housing).

McMinnville is planning for slightly higher overall average density than it has in the past. As McMinnville shifts toward more single-family attached housing and multifamily housing, McMinnville's average housing density (for new dwelling units) will increase from 4.9 dwelling units per gross acre (historic average density) to 5.3 dwelling units per gross acre (needed average density)—an 8% increase.[78]

McMinnville's existing deficit of relatively affordable housing on both sides of the affordability spectrum indicates a need for a wider range of housing types for renters and homeowners. About 36% of McMinnville's households are cost burdened (paying more than 30% of their income on housing), including a cost-burden rate of 52% for renter households. Without diversification of housing types, lack of affordability will continue to be a problem—possibly

[78] This calculation is based on average historical density by housing type. The existing analysis presented in Chapter 6 is calculated using average historical density by zone.

growing in the future if incomes continue to grow at a slower rate than housing costs. Under the current conditions between 2021 and 2041, about:

- **1,016 of the forecasted new households will have incomes of $25,150 or less.** These households often cannot afford market-rate housing without government subsidy.
- **1,711 new households will have incomes between $25,150 and $60,359.** These households will need access to relatively affordable housing, such as single-family detached housing (e.g., tiny homes, cottages, small-lot, and traditional), single-family attached housing (e.g., town homes), and multifamily products (particularly middle housing types such as duplexes, triplexes, quadplexes, and apartments/multifamily condominiums).
- **1,930 new households will have incomes over $60,359.** These households will need higher-amenity housing types such as single-family detached housing, single-family attached housing, and higher-end multifamily products (particularly condominiums).

McMinnville's UGB will not accommodate all of McMinnville's housing needs. Over the planning period through 2041, McMinnville has a deficit of capacity for 1,926 dwelling units, which means the City has an approximate deficit of about 363 gross acres by 2041. Housing demand results for the 5-, 10-, 20-, and 46-year periods are summarized in Exhibit 97.

Exhibit 97. Summary of New Dwelling Units, for the Periods through 2026, 2031, 2041, and 2067

Equals D.U.s requiring Vacant/Partially Vacant Land	1,045	2,121	4,284	10,107

Appendix A. Residential Buildable Lands Inventory Methods

The general structure of the residential buildable land (supply) inventory is generally based on the DLCD HB 2709 workbook "*Planning for Residential Growth – A Workbook for Oregon's Urban Areas*," which specifically addresses residential lands. The buildable lands inventory uses methods and definitions that are consistent with Goal 10/OAR 660-008.

ECONorthwest used 2018 and 2017 (assessor tax year) data for this report. The following provides an overview of the buildable lands inventory methodology.

Overview of the Methodology

The McMinnville BLI includes all residential land designated in zones or plan designations within the McMinnville UGB. From a practical perspective, this means that all lands within tax lots identified by the Yamhill County Assessment and Taxation Department that fall within the UGB were inventoried. ECONorthwest used the most recent tax lot shapefile (that was available at the time of the analysis) and assessor's roll data from Yamhill County for the analysis. The inventory then builds from the tax lot–level database to calculate estimates of buildable land by zone.

The buildable lands analysis was completed through several sequential steps.

Step 1: Generate land base. Per Goal 10, this involves selecting all of the tax lots in the McMinnville UGB with residential zones and "lands that may be used for a mix of residential and employment uses under the existing planning or zoning."

ECONorthwest included the following zones in the residential inventory based on statutory requirements in ORS 197.296(4)(a):

- R-1 Single-Family Residential
- R-2 Single-Family Residential
- R-3 Two-Family Residential
- R-4 Multifamily Residential
- O-R Office/Residential
- C-3 General Commercial

Since McMinnville has a single residential plan designation, the land base includes these zones as well as any additional tax lots within the residential plan designation. For lands in the UGB that have the residential plan designation but still retain County zoning, properties within the residential plan designation were included in the BLI.

Step 2: Classify lands by development status. Next, the analysis classified each parcel into one of the following categories based on development status.

- Developed land
- Vacant land
- Partially vacant land
- Public or Exempt land

Step 3: Identify constraints. Consistent with the Division 8 rule, this includes floodways, floodplains (including lands in McMinnville's floodplain zone), regulated wetlands, lands with slopes of 25% or greater, landslide hazards (including the DOGAMI SLIDO database and lands with high or very high susceptibility to landslides), and service constrained lands. All constraints were merged into a single constraint file, which was used to identify the area of each tax lot that is constrained. These areas were deducted from lands that were identified as vacant or partially vacant.

Step 4: Verification. ECONorthwest used a multistep verification process to ensure the accuracy of the BLI. The first verification step included a rapid visual assessment of land classifications using GIS and recent aerial photos to verify uses on the ground. The second round of verification involved City staff verifying the rapid visual assessment output. ECONorthwest amended the BLI based on City staff review and a discussion of the City's comments.

The inventory was completed primarily using Geographic Information Systems (GIS) mapping technology. The output of this analysis is a database of land inventory information, which is summarized in both tabular and map format in Chapter 2. Although data for the inventory was gathered and evaluated at the parcel level, the inventory does not present a parcel-level analysis of lot availability and suitability. The results of the inventory have been aggregated by zone (City limits) and plan designation (outside City limits and in UGB), consistent with State planning requirements.

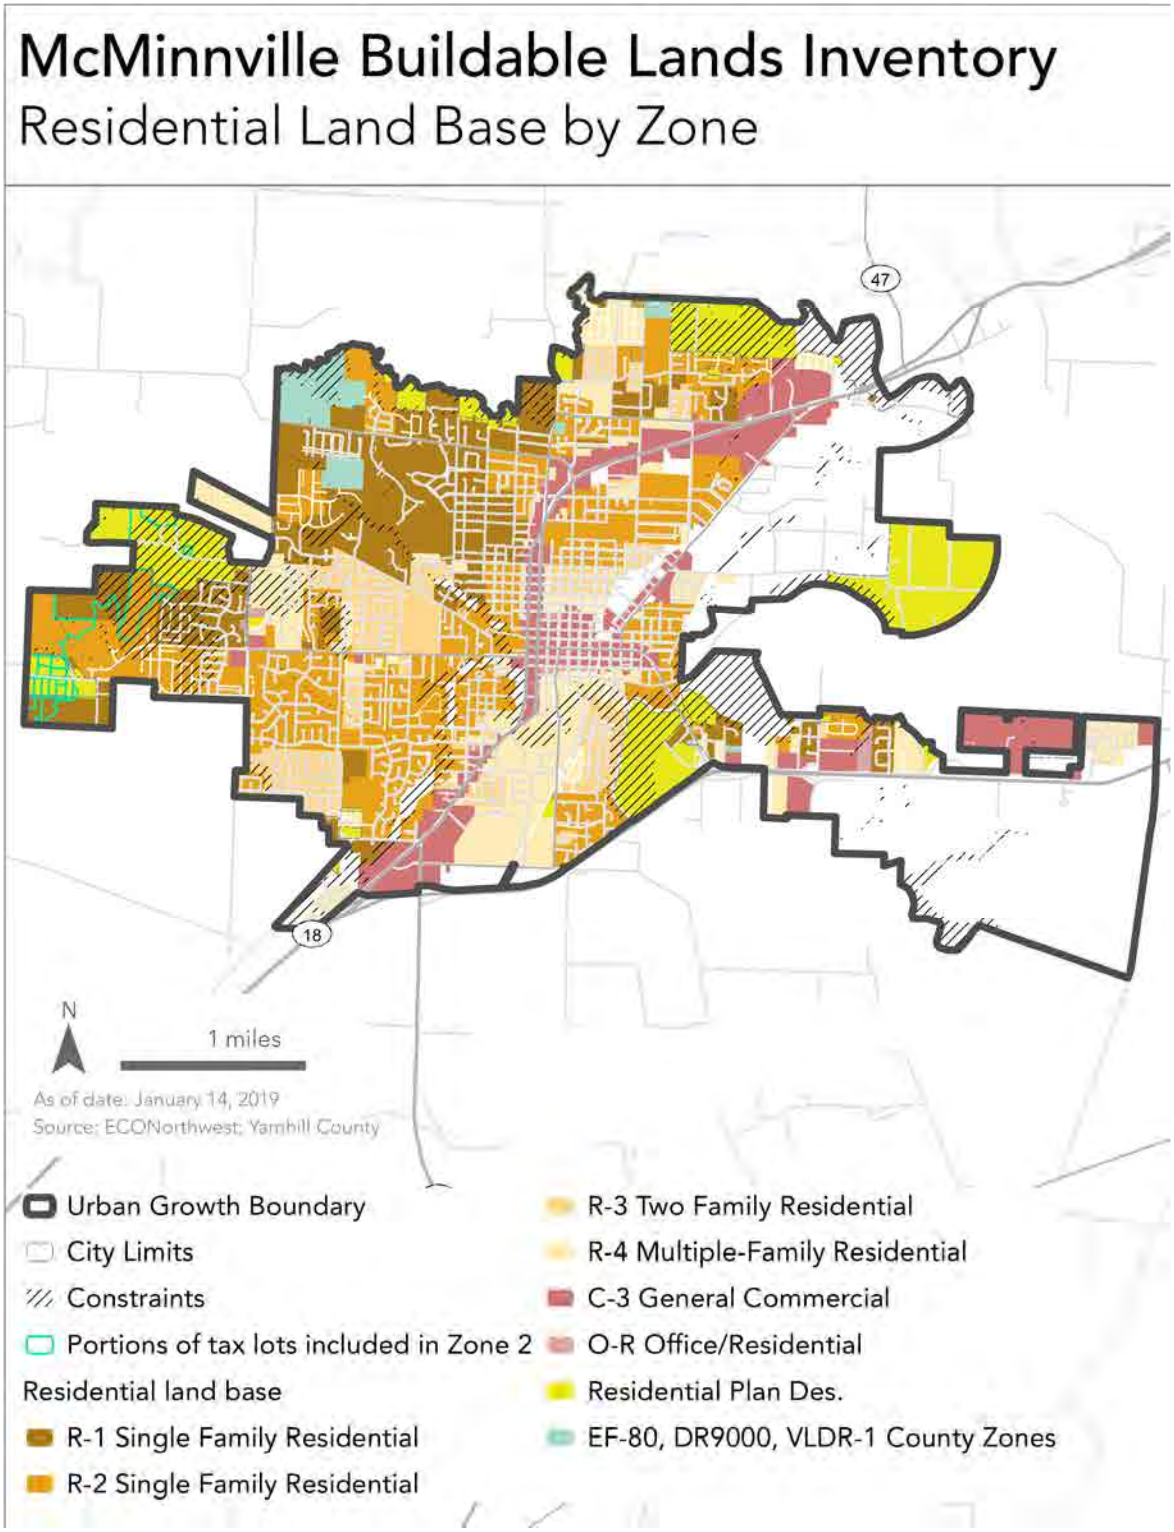
Data used for the analysis was provided by the City of McMinnville and the Yamhill County Assessor and Taxation Department, as well as statewide and national data sets. Specific data that was used included City/urban growth boundaries, tax lots, zoning, the National Wetlands Inventory, DOGAMI landslide hazards and susceptibility, floodway and floodplains, conservation easements, and slopes. The tax lot data was current as of August 2018.

Residential Land Base

Exhibit 98 (on the following page) shows the zones and plan designations included in the residential land base. This BLI includes lands in the R-1, R-2, R-3, R-4, O-R, and C-3 zones, as well as other land in the residential plan designation. Tax lots with a residential use in the F-P zone or F-P plan designation were also included on a case-by-case basis based on proximity to other residential land or using property class data to determine if the tax lot has a residential use. Land in zones that do not allow residential use were not included. These tax lots were assigned a residential zone or plan designation based on proximity to other residential zones, since the floodplain zone was included as a constraint.

Land in the Zone 2 contour was also identified due to additional considerations for capacity. Using the Intersect tool in GIS, land in tax lots either completely within or partially within the Zone 2 were calculated separately from land in those tax lots in Zone 1.

Exhibit 98. Residential Land Base by Zone and Plan Designation, McMinnville UGB, 2018



Appendix B. Scenario Modeling

ECONorthwest developed scenario models to inform Project Advisory Committee discussions about needed housing mix and density. This appendix presents the models for reference.

Housing Forecast by Housing Type

This section documents the process in determining needed housing mix and density assumptions. To inform the Project Advisory Committee's recommendation for the housing mix assumption, ECONorthwest modeled four housing mix scenarios. ECONorthwest used the scenarios to illustrate how housing mix impacts capacity and land sufficiency. The four scenarios were:

- **Existing Mix (ACS 2013–2017):** 68% single-family detached, 9% single-family attached, and 23% multifamily
- **Historical Mix (Housing Permitted 2000 to 2018):** 62% single-family detached, 8% single-family attached, and 31% multifamily
- **Scenario 1 (Preliminary Needed Mix):** 60% single-family detached, 10% single-family attached, and 30% multifamily
- **Scenario 2 (Preliminary Needed Mix):** 55% single-family detached, 12% single-family attached, and 33% multifamily

Using the four scenarios, ECONorthwest forecasted needed housing in McMinnville by housing type. Exhibit 99 presents a 20-year forecast (using the four scenarios), and Exhibit 100 presents the 5-, 10-, 20-, and 46-year forecasts (using the historic mix scenario).

Exhibit 99. Scenario Model: Forecast of Demand for New Dwelling Units, McMinnville UGB, 2021 to 2041

The housing mix determination over the 2021 to 2041 period will impact McMinnville's overall housing mix in 2041. Exhibit 101 displays what McMinnville's overall housing mix would be in 2041 based on each of the four scenarios. Exhibit 102 displays what McMinnville's overall housing mix would be at the end of McMinnville's various planning horizons (2026, 2031, 2041, and 2067)

Exhibit 101. Scenario Model: Estimated Aggregate Future Housing Mix, McMinnville UGB, 2041

Source: Calculations by ECONorthwest. Note: According to the US Census, McMinnville had 8,902 single-family detached units, 1,180 single-family attached units, and 3,007 multifamily units (totaling 13,089 dwelling units) in the 2013–2017 period. The 17,513 (total) is the 13,089 units, plus the 4,424 needed new units.

	Existing Mix (ACS 2013-2017)	Historic Mix (2000 to 2018)	Scenario 1	Scenario 2

Allocation of Needed Housing

ECONorthwest modeled allocation analyses for each of the four housing mix scenarios. The scenario models for the 20-year planning period are presented in Exhibit 103 through Exhibit 106 and do not reflect updated group quarters assumptions or account for units accommodated by infill or redevelopment. The revised methodology presented in the main report does not use this methodology, however. Thus, these tables are for reference into the process only.

The first step in the allocation analysis (presented here) is based on McMinnville's historic share of housing developed in each of McMinnville's existing zones between 2000 and 2018. For example, between 2000 and 2018, 16% of McMinnville's housing development occurred in R-1, 44% occurred in R-2, 6% in R-3, and 34% in R-4.

Needed Densities

A city's average residential density is influenced by the its housing mix. Using the four housing mix scenarios and McMinnville's historic densities (Exhibit 91), ECONorthwest illustrated how average gross densities increase as the share of single-family detached housing decreases.

Exhibit 107. Scenario Model: Estimated Aggregate Residential Densities, McMinnville UGB, 2021 to 2041
Source: Calculations by ECONorthwest.

Variable	Existing Mix (ACS 2013-2017)	Historic Mix (2000 to 2018)	Scenario 1	Scenario 2
Dwelling units by structure type				
Single-family detached	3,009	2,733	2,654	2,433
Average gross density SFD	3.6	3.6	3.6	3.6
equals gross acres needed for SFD	836	759	737	676
Single-family attached	399	332	442	531
Average gross density SFA	9.3	9.3	9.3	9.3
equals gross acres needed for SFA	43	36	48	57

Land Sufficiency Approximations for the 2021 to 2041 Planning Period

Exhibit 108, Exhibit 109, Exhibit 110, and Exhibit 111 show the residential land sufficiency results, modeled using each of the four housing mix scenarios. Notes about the models:

- Modeled results in this appendix do not reflect land needed to accommodate housing development before 2021, which is addressed in the main report.
- Modeled results in this appendix used a different methodology for group quarters, resulting in a different estimate for housing demand.
- Modeled results do not reflect assumptions for dwelling units accommodated through infill or redevelopment.

The scenario models show that McMinnville's 721 buildable acres (660 in residential zones) available for residential development has capacity for 2,921 dwelling units. Over the 2021 to 2041 planning period, McMinnville will have demand for 4,424 dwelling units. At densities observed between 2000 and 2018, this translates into a land deficit of (1) 321 gross acres in the existing mix scenario, (2) 320 gross acres in the historical mix scenario, (3) 325 gross acres in scenario 1, and (4) 323 gross acres in scenario 2. Each scenario showed that McMinnville does not have sufficient capacity to accommodate needed new housing in R-1, R-2, R-3, and R-4 areas.

Note: Due to the way demand was allocated to zones in the allocation scenario models (see Exhibit 103, Exhibit 104, Exhibit 105, and Exhibit 106 as well as the corresponding basis), the approximate land surplus and deficit are relatively similar across models. Accordingly, the models allocate housing demand to zones comparably across models and at an average density applied on total units per zone.

City of McMinnville
Addendum 1 to June 2019 Draft Housing Needs Analysis (HNA):
Description of June 2020 Revisions to Residential Capacity Analysis,
as Reflected in June 2020 Draft Urbanization Report

Summary

This addendum provides supplemental analysis that revises certain aspects of the residential capacity analysis for the Buildable Land Inventory (BLI) in the June 2019 Draft Housing Needs Analysis (HNA). This updated analysis and revision to the June 2019 Draft HNA is reflected in the June 2020 Draft Urbanization Report. The updates address the issues below.

1. Corrections to BLI Acreages Due to Split-Zoned Lots Identified During EOA Work
2. Capacity of Exception Areas in the UGB
    a. OAR 660-024-0067(6) Analysis
    b. Density Assumptions
    c. Other: Serviceability
3. Analysis Under ORS 197.296 as Amended by HB 2001
4. Small Lot Status and Capacity
5. Add capacity for vacant already platted lots within landslide constraint area

Any assumptions used in the June 2019 HNA which are revised by this addendum are described herein in detail.

The table below summarizes the revisions provided in this addendum.

In summary, the housing need remains unchanged; it is the capacity of the buildable lands which is revised. The need for 5,269 additional dwellings by 2041 remains the same. ***The updated analysis results in a reduction in the capacity of buildable lands, when compared to the 2019 Draft HNA, from 2,921 dwellings to 2,129 dwellings, a net capacity reduction of 792 dwellings.***

This means there is a deficit of buildable lands to meet the needs for 3,053 of the 5,269 needed dwellings by 2041. At a historic density of 4.9 du/gross acre, this is a deficit of 623 gross buildable acres. At the "needed" density of 5.3 du/gross acre, this is a deficit of 576 gross buildable acres.

Note: *The City is undertaking inventory and analysis of additional Goal 7 hazards, Goal 5 natural and cultural resources, and constraints which could be subject to adoption of protection measures which could potentially render certain areas unbuildable or could reduce capacity. While this addendum may provide additional information and discussion relating to these constraints, these other constraints have not been introduced into or applied to this revised capacity analysis.*

Summary Table - 2018-2041 Residential Capacity Analysis Revisions

Component	Description	Capacity - Dwelling Units		
		Original	Revised	Difference

1. Corrections to BLI Acreages Due to Split-Zoned Lots Identified During EOA Work

Following completion of work on the June 2019 Draft HNA, the City began work on an update to the Economic Opportunities Analysis (EOA). During that work, it was observed that there were some split-zoned tax lots. While some tax lots had only a small portion of the acreage in a second zone, in other cases, there were a few larger tax lots that had a significant percentage of acreage in each zone. For example, some tax lots were split-zoned with some acreage in a residential zone and some acreage in a commercial zone. During the HNA work, the split-zoned tax lots had the entire acreage assigned to the zone in which the majority of the tax lot was located. This approach helped avoid issues with "slivers" that can result with technical issues associated with minor mapping alignments.

However, it was insufficient to address those few split-zoned tax lots with a significant percentage of the acreage in each zone. Therefore, during the Buildable Lands Inventory (BLI) work for the EOA, those tax lots were split at the zone boundary, and the acreage within each zone was addressed within the respective residential or employment buildable lands inventory. Acres in the residential portions were assigned to the residential BLI and acres in commercial or industrial portions were assigned to the employment BLI. The analysis dates for the cut-off date for the BLI work for the HNA and EOA work were also aligned for consistency.

The buildable lands inventory and capacity analysis for the HNA is updated accordingly. This is shown below for Exhibits 94 and 95. With the adjustments to buildable acres for the residential portions of the split zoned lots, the capacity is 2,822 dwellings.

Original Exhibits 94 and 95:

The original assumptions for the capacity analysis of buildable lands within the UGB used in the HNA, including status of unincorporated exception areas previously added to the UGB, was summarized in Tables 94 and 95, below.

Exhibit 94. Unconstrained Vacant and Partially Vacant Buildable Land (Water Zone 1 and 2) with Baseline Capacity, McMinnville UGB, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. Note1: DU is dwelling unit. Note2: The density of county zoned land is the historic average density achieved (4.9 du/gross acre).

Zoning Districts	Total Unconstrained Buildable Acres *(Water Zone 1 & 2)*	Density Assumption (DU/Gross Acre)	Capacity (Dwelling Units)
R-1 Single Family Residential	145	3.1	449
R-2 Single Family Residential	131	4.3	561
R-3 Two Family Residential	6	4.8	28
R-4 Multiple-Family Residential	21	6.1	127
O-R Office/Residential	0	6.3	3
C-3 General Commercial	61	21.9	-
County Zoning	358	4.9	1,753
TOTAL	**721**	**4.1**	**2,921**

Exhibit 94 shows that McMinnville has 721 acres of unconstrained buildable lands, (approx. 660 acres in residential zones are assigned residential capacity), with capacity for 2,921 dwelling units using historical densities by zoning district (before deducting acreage for housing development between 2018 and 2021). Exhibit 95 shows that McMinnville has 588 acres of unconstrained buildable lands in Zone 1, 75 with capacity for 2,360 dwelling units (before deducting acreage for housing development between 2018 and 2021 and by using historical densities by zoning district).

Exhibit 95. Unconstrained Vacant and Partially Vacant Buildable Land (Water Zone 1) with Baseline Capacity, McMinnville UGB, 2018

Source: Buildable Lands Inventory; Calculations by ECONorthwest. Note1: DU is dwelling unit. Note2: The density of county zoned land is the historic average density achieved (4.9 du/gross acre).

Zoning Districts	Total Unconstrained Buildable Acres *(Water Zone 1)*	Density Assumption (DU/Gross Acre)	Capacity (Dwelling Units)
R-1 Single Family Residential	109	3.1	338
R-2 Single Family Residential	86	4.3	368
R-3 Two Family Residential	6	4.8	28
R-4 Multiple-Family Residential	21	6.1	127
O-R Office/Residential	0	6.3	3
C-3 General Commercial	61	21.9	-
County Zoning	305	4.9	1,496
TOTAL	**588**	**4.0**	**2,360**

Note: All housing development occurring between 2018 and 2021 is assumed to be in Water Zone 1 as Water Zone 2 will not be serviceable during that time. The report presents this deduction in the following sub-section.

Updated Exhibits 94 and 95:

Exhibits 94 and 95 with the updated buildable lands and capacity analysis reflecting the adjustments for split-zoned properties are provided below:

Exhibit 94. Unconstrained Vacant and Partially Vacant Buildable Land (Water Zone 1 and 2) with Baseline Capacity, McMinnville UGB, 2018

TOTAL	**511**	**-**	**2,261**

2. Capacity of Exception Areas in the UGB

2a. OAR 660-024-0067(6) Analysis

As applied to the exception areas added to the UGB, the provisions of OAR 660-024-0067(6) provide for reduced capacity assumptions for tax lots less than two acres.

This is based on research and analysis that was conducted for the "HB 2554 Report." In September 2015, The University of Oregon Community Service Center published a final report for the HB 2254 Rules Advisory Committee, "Analysis of Development on Rural Residential Lands: A Report to the HB 2254 Rules Advisory Committee."

Some of the key findings excerpted from the report are as follows:

- Lots under two acres are much less likely to divide and develop at urban densities than lots over two acres.

- Across all zones, parcelization of lots (e.g., land divisions) less than 1 acre is very infrequent. Within Rural Residential zones, 2 to 5 acre parcels are the most common to parcelize. If cities are adding existing developed Rural Residential subdivisions with lots less than 2 acres, it is not likely that any capacity exists on these lands.

- Development and parcelization in all unincorporated areas inside UGBs has slowed tremendously since the implementation of the Statewide Planning Program but is still occurring in some jurisdictions. Continued development in incorporated areas, particularly on parcels less than 2 acres, will have long term implications for UGB expansion as parcels less than 2 acres are unlikely to subdivide inside UGBs.

OAR 660-024-0067(6) was adopted in response to these findings, and the OAR provides:

(6) For vacant or partially vacant lands added to the UGB to provide for residential uses:

(a) Existing lots or parcels one acre or less may be assumed to have a development capacity of one dwelling unit per lot or parcel. Existing lots or parcels greater than one acre but less than two acres shall be assumed to have an aggregate development capacity of two dwelling units per acre.

(b) In any subsequent review of a UGB pursuant to this division, the city may use a development assumption for land described in subsection (a) of this section for a period of up to 14 years from the date the lands were added to the UGB.

This applies to lands within three exception areas that were added to the UGB: Riverside South, Redmond Hill Road, and Fox Ridge Road.

The tables below show the total tax lots in these areas, total acres before deducting constraints, and total buildable acres. All tax lots in these areas are privately owned, except for three tax lots in Fox Ridge Road which would be unavailable for development. Two of these are public sites for water infrastructure and one of these is a cemetery. Those are included in the calculations for total tax lots and acres, but excluded from the calculations for buildable residential properties in the tables below.

Of the original capacity of 2,921 dwelling units within the UGB shown in the original Exhibit 94 of the HNA, capacity of 1,029 dwellings is assumed within the exception areas, as shown in the table below.

Capacity of Exception Areas and Other Lands

Areas	Capacity (DUs)
Exception Areas	1,029
Other Lands	1,892
Total	**2,921**

The breakdown of that 1,029 dwelling unit capacity for each exception area in the UGB is shown in the table below as calculated in the original June 2019 Draft HNA.

Capacity of Exception Areas

Area	Tot. TLs	Tot. Ac	Buildable Acres			DU/Gross Ac	Capacity (DUs)
			Zone 1	Zone 2+	Total		
Fox Ridge Road	29	145	0	23	23	4.9	113
Redmond Hill Road	15	44	10	30	40	4.9	196
Riverside South	76	191	147	0	147	4.9	720
SUM	**120**	**380**	**158**	**53**	**210**		**1,029**

Not all tax lots or acreage within tax lots is private land available for development. Some are public lands, and some private acreage is constrained by natural features or hazards. The following table provides a breakdown of the tax lots with buildable acreage by size class. Properties in the smaller size classes (<=1ac, >1<2 ac) will have the provisions of OAR 660-024-0067(6) applied, while the same density assumptions as the original method are applied to the larger size class (>=2 ac) in this section.

Exception Areas Tax Lots with Unconstrained Residential Capacity by Size Class

Area	# Unc. TLs <=1 Bld Ac			# Unc. TLs >1<2 Bld Ac			# Unc. TLs >=2 Bld Ac			SUM		
	w/DU	w/o DU	Total	w/DU	w/o DU	Total	w/DU	w/o DU	Total	w/DU	w/o DU	Total
Fox Ridge Road	1	1	2	1	0	1	1	0	1	3	1	4
Redmond Hill Road	1	0	1	1	0	1	8	5	13	10	5	15
Riverside South	20	1	21	14	1	15	35	5	40	69	7	76
SUM	22	2	**24**	16	1	**17**	44	10	**54**	82	13	**95**

The result of applying the OAR 660-024-0067(6) provisions to these tax lots based on size class results in revised capacity as provided in the table below.

Exception Areas Capacity with OAR 660-024-0067 Adjustments

Area	Capacity			
	<=1 unconstr ac	>1<2 unconstr ac	>=2 unconstr ac	TOTAL
Fox Ridge Road	1	1	119	121
Redmond Hill Road	0	1	160	161
Riverside South	1	14	408	423
SUM	**2**	**16**	**687**	**705**

The table below compares the original and revised capacity calculations. Capacity of lots less than two buildable acres is reduced from 342 DUs to 18 DUs. The result is reduced capacity from 1,029 DUs to 705 DUs within the three exception areas. This a difference of 324 fewer DUs for the exception areas resulting from applying OAR 660-024-0067(6) to parcels of two acres or smaller.

Exception Areas Capacity Comparison

Bld Ac	Original	Revised	Difference
Lots <2 bld ac	342	18	(324)
Lots >=2 bld ac	687	687	-
SUM	**1,029**	**705**	**(324)**

This means the overall capacity of lands within the UGB is reduced by 324 DUs, from the original 2,921 DUs as shown in the original Exhibit 94 of the HNA to 2,597 DUs as shown below, before accounting for the adjustments associated with issue #1 above and other issues below.

Capacity of Exception Areas and Other Lands

Areas	Capacity (DUs)		
	Original	Revised	Difference
Exception Areas	1,029	705	(324)
Other Lands	1,892	1,892	-
Total	**2,921**	**2,597**	**(324)**

2b. Revised Capacity and Density Assumptions for Exception Area Tax Lots >= 2 Acres

The density factor of 4.9 du/gross acre applied to the exception areas, calculated in the tables above, is the average density for all urban residential zones because the exception areas still have county rural zoning, and haven't yet had city urban residential zoning applied. Capacity assumptions will need to be adjusted based on a determination of zoning to be applied to these areas, which is further discussed in a separate section below.

Since the average density for all zones was used to calculate capacity for exception areas, capacity assumptions need to be adjusted based on further determinations of suitability of zoning to be applied to these different areas. Capacity can be calculated based on the historic densities by zoning district, which for the R-1, R-2, and R-3 zones, are respectively 3.1 du/gross acre, 4.3 du/gross acre, and 4.8 du/gross acre. The high percentage of exception area small parcels with no capacity or low capacity under the OAR 660-024-0067(6) calculations, and their spatial distribution within these areas influences the consideration of the appropriate zoning for these areas.

Further, with the above findings and assumptions regarding parcels of two acres or smaller, efficiencies are not achieved on those smaller properties. This means significantly higher densities would be required on parcels >=2 acres to achieve the overall average “needed” density of 4.9 du/acre within the exception areas, with insufficient numbers of parcels >=2 acres to achieve this average. This means assumptions for exception areas need to recognize that these areas are incapable of realistically achieving production of housing averaging 4.9 du/gross acre in the baseline analysis.

The calculations below show the capacity of these areas after applying the OAR 660-024-0067(6) provisions to tax lots of <2 acres, then applying an R-1 density assumption of 3.1 du/gross acre for tax lots >= 2 unconstrained acres, and how that would affect the overall capacity of lands in the UGB, versus the 4.9 du/gross acre assumption used above for the baseline analysis in the June 2019 Draft HNA.

Exception Areas Capacity with OAR 660-024-0067 Adjustments for Parcels Smaller than 2 acres and Revised Density Calculations for Parcels >=2 Acres (at 3.1 du/gross acre).

Area	Capacity			
	<=1 unconstr ac	>1<2 unconstr ac	>=2 unconstr ac	TOTAL
Fox Ridge Road	1	1	75	77
Redmond Hill Road	0	1	101	102
Riverside South	1	14	258	273

Total	**2,921**	**2,344**	**(577)**

**applying 3.1 du/gross acre density factor to exception area properties >=2 unconstrained acres for revised*

2c. Other: Serviceability: Elevation >415' Elevation (Potential Water Pressure Zone 3)

In the June 2019 Draft Residential Buildable Lands Inventory and Capacity Analysis, it was assumed that lands with elevations above 275' elevation were in water pressure service Zone 2, which requires development of Zone 2 water infrastructure to serve those properties, including water storage tanks. The assumptions for the BLI were that Zone 2 infrastructure would not be developed for approximately 10 years, but that Zone 2 could still be serviced approximately during the second half of the 2-year planning period.

However, water pressure Zone 2 is an elevation band between approximately 275'-415' elevation. Therefore, properties (and future structures) with elevation over 415' elevation would need to be further evaluated to determine whether they could be served from Zone 2 infrastructure, or whether a new Zone 3 (and/or additional Zones for substantially higher elevations) and associated infrastructure, would be necessary to serve properties with elevation over 415' elevation. Depending on the elevation, the ultimate extent and size of the service area, water provider standards and performance policies, fire pressure and fireflow requirements, and public drinking water standards, there may need to be analysis of options for private booster pumps, public pump stations, an/or ultimately additional water storage facilities.

A portion of the Fox Ridge area, approximately 6.5 acres, and a small portion of the Redmond Hill Road area, approximately 0.5 acre, are above 415' elevation. The current water system master plan doesn't currently include Zone 3 service. If the elevation above 415' elevation can't be served from Zone 2 facilities, or if Zone 3 service isn't addressed in the master plan, then approximately 6.5 acres of the Fox Ridge Road area would not be available for development within the 20-year planning horizon, reducing capacity of that area by approximately 32 additional DUs if applying the density factor of 4.9 du/gross acre. As addressed in 2b above, a density factor of 3.1 du/gross acre is assumed for this area, and this would reduce the capacity of this area by approximately 20 additional DUs.

<u>3. Analysis under ORS 197.296 as Amended by HB 2001</u>

HB 2001 was signed into law after the City finished the preliminary work to produce the June 2019 Draft HNA with recommendations from the Project Advisory Committee. HB 2001 amends ORS 197.296(6) in part to specify that, when a City is expanding its UGB and/or including new measures to accommodate growth within the UGB, that it must:

> "adopt findings regarding the density expectations assumed to result from the measures adopted under this paragraph based upon the factors listed in ORS 197.303(2) and data in subsection (5)(a) of this section. The density expectations may not project an increase in residential capacity above achieved density by more than three percent without quantifiable validation of such departures. For a local government located outside a metropolitan service district, a quantifiable validation must demonstrate that the assumed housing capacity has been achieved in areas that are zoned to allow no greater than the same authorized density level within the local jurisdiction or a jurisdiction in the same region."

This statute prescribes what assumptions cities are to apply when considering how implementation of standards to allow "middle housing" in zones that allow single-family dwellings would affect capacity consideration, stating, "The density expectations may not project an increase in residential capacity above achieved density by more than three percent without quantifiable validation of such departures."

The City sought clarification from DLCD on their interpretation of how to apply this new provision to an HNA. Their interpretation is provided below:

> We have come to the conclusion that the 3% limit on assumptions for increased residential capacity above achieved density applies to a broad range of "efficiency measures," including many of the measures listed in OAR 660-038-0190(5). ORS Section 197.296(5) describes how local governments are to determine housing capacity within residential areas, based on the number, density, and average mix of housing types that have been developed since completion of the prior buildable land inventory.
>
> The presumption here is that efficiency measures would be enacted within the same residential zones, in order to establish baseline numbers for past housing production. For this reason, the 3% cap would not apply to the establishment of new zones or zone changes that would allow higher densities than were previously allowed in an area. The notable exception here is the adoption of middle housing allowances, per HB 2001, which would not change the zoning and would therefore be subject to the 3% limitation.
>
> It should also be noted that Section 6(b) allows local governments to assume housing production above a 3% increase if "quantifiable validation" of such an increase can be demonstrated, as detailed in Section 6(b).

The analysis in the June 2019 draft HNA reflects the analysis required by ORS 197.296 as it existed prior to the HB 2001 amendments.

The baseline "density expectations" by zone, and the associated capacity of buildable lands, using those density expectations for the BLI were provided in Exhibit 94 (below) in the June 2019 Draft HNA. It shows the 661 buildable residential acres have capacity for 2,921 dwelling units. Three percent above that capacity is 3,008 dwellings, or 87 additional dwellings. After correcting for split-zoned lots in Section 1 above, as reflected in the updated Exhibit 94 below, this capacity is 2,822 dwelling units based on the historic achieved density. Three percent capacity over historic achieved density, the assumption required by the statute, is 2,906 dwelling units, or about 85 additional dwellings.

County Zoning	344	4.9	1,687
County Sub-Total	**344**	**-**	**1,687**
TOTAL	**644**	**-**	**2,822**

The June 2019 Draft HNA already included assumptions about the amount of new residential development to be accommodated through infill and redevelopment. Therefore, that needs to be revised to be consistent with ORS 197.296 as amended by HB 2001 as discussed above, and to avoid double-counting infill and redevelopment assumptions twice.

The approach and assumptions used in the 2019 Draft HNA borrowed from the provisions for the “simplified” UGB approach in OAR 660 Division 38, which provides a range of percentages that can be used to assume how many new dwelling units would be developed through infill and redevelopment, thereby reducing demand on new vacant and partially vacant land for new housing. This approach is based on deducting a percentage of housing from the total housing need that won't require new vacant or partially vacant land.

That approach specifies assumptions which are based on a percentage of needed housing assumed to be achieved through infill and redevelopment rather than the capacity of buildable lands. That is then deducted from the housing need that is assumed to require new vacant or partially vacant buildable land. The assumptions used in the 2019 Draft HNA were within the range identified under the simplified approach, but the assumptions were not based on quantifiable validation that identified specific properties likely to experience infill and redevelopment, and further, they exceeded the historic achieved infill and redevelopment.

The 3% limits in HB 2001 are applied to capacity of buildable lands, not a percentage of needed housing. Therefore, the 3% limits in HB 2001 need to be added, and the assumptions used in the June 2019 Draft HNA need to be removed.

The June 2019 Draft HNA assumed 8% of needed new housing would be achieved through infill and redevelopment. The tables below show what that means in terms of number of dwelling units and the impact in terms of effective density of the current inventory of vacant and partially vacant residential land. In short, the 8% infill rate (422 units) would be mean the effective capacity of existing buildable land would be significantly higher than an additional 3% in capacity over the historic "achieved" density. An infill and redevelopment rate of 1.65% of needed housing (87 dwellings) would result in an effective increase in capacity of buildable lands of 3% over the historic achieved density for the residential buildable lands, based on the original 2,921 dwelling unit capacity in the original Exhibit 94. *(Please note the table below has calculations based on the original Exhibit 94. The narrative below describes the adjustments based on the updated Exhibit 94).*

Residential Land Type	**2018-21**	**2021-41**	**SUM**
New Vacant Land	563	4,284	4,847
Infill/Redev (8%)	49	373	422
SUM	**612**	**4,657**	**5,269**

Current Capacity			
Capacity of 661 Res Buildable Acres (Ex 94)			2,921
Density (2,921/661)	4.41	du/ac	

Effective Capacity with Current Infill & Redevelopment Assumptions			
Effective Cap. of 661 Res Bld Ac w/ 422 I/R Dus (8%)			3,343
I/R rate: 8%			
Difference (2,921 + 422)			422
Effective Density (3,343 du/661 ac)	5.06	du/ac	

103% of Current Capacity, Effective Infill & Redevelopment Rate			
103% of Capacity of 661 Res Bld Acres 2,921*1.03)			3,008
Difference			87
Effective Density	4.55	du/ac	
Effective I/R Rate (87/5,269): 1.65%			

The calculations in the table above were performed prior to the corrections to Exhibit 94 described in Section 1 to correct for buildable acres and capacity associated with split-zoned lots. If this is applied to the updated Exhibit 94 which reflects the buildable acres and capacity of 2,822 DUs after adjusting for split-zoned tax lots, the difference is only about 2 dwelling units less than the calculation above, approximately 85 dwelling units.

This is broken down by zoning district in the table below. The number is approximately 7 dwelling units higher in the table below due to rounding differences. The table below is again based on the capacity of 2,921 DUs in the original Exhibit 94 before correctly for split-zoned lots, so the calculation based on updated Exhibit 94 would be about 2-3 dwellings less.

Zoning District	Total Unconstrained Buildable Acres (Water Zones 1 & 2)	Density Assumpton (DU/gross ac)	Capacity (Dwelling Units)	3% Higher Density Assumption	Capacity (Dwelling Units)	Difference in Capacity (Dwelling Units)
R-1	145	3.1	449	3.193	463	14
R-2	131	4.3	561	4.429	580	19
R-3	6	4.8	28	4.944	30	2
R-4	21	6.1	127	6.283	132	5
O-R	0	6.3	3	6.489	3	0
C-3	61	21.9	-	22.557		-
County Zoning	358	4.9	1,753	5.047	1,807	54
Total	**722**	**4.1**	**2,921**		**3,015**	**94**

*661 buildable residential acres, excluding C-3 zoned land
**Rounding and calculations to two decimal places for the 3% higher density assumption results in capacity of 3,008 rather than 3,015.

Absent additional efficiency measures, an infill/redevelopment rate in excess of 1.65% of needed new housing or roughly 85 dwelling units would exceed the additional 3% capacity of buildable land above historic achieved density without quantifiable validation for buildable lands, and would be inconsistent with HB 2001.

4. Small Lot Status and Capacity

Most of the tax lots which do not have land use entitlements are highly parcelized in small, dispersed parcels. Based on analysis of historic partition and development on small lots, the capacity assumptions used in the June 2019 Draft HNA would overstate the capacity yield of smaller lots during the planning period. Background information is provided below. Based on the analysis of historic partition activity, the capacity of partially vacant lots smaller than 2 acres would be revised to reflect historic capacity achieved through residential partitions of lots smaller than 2 acres.

Background

State law requires that, for all land classified as “buildable” in the Buildable Land Inventory, it must be assumed that land will develop during the 20-year planning period to meet the housing need, unless there is a surplus which exceeds the need. In this respect, the applicable law doesn’t differentiate between one decision to develop a 50-lot subdivision on a larger property from 50 separate decisions that would each partition or add a home to a smaller property. The reality is much different in terms of decision-making and investments to develop new housing. The housing market doesn’t supply housing nearly as efficiently through the incremental small lot development. This is borne out by McMinnville's partition and development history, as well as findings documented in the HB 2554 report.

The HB 26554 report includes the following findings:

- Across all zones, parcelization of lots (e.g., land divisions) less than 1 acre is very infrequent.

- Development and parcelization in all unincorporated areas inside UGBs has slowed tremendously since the implementation of the Statewide Planning Program but is still occurring in some jurisdictions. Continued development in incorporated areas, particularly on parcels less than 2 acres, will have long term implications for UGB expansion as parcels less than 2 acres are unlikely to subdivide inside UGBs.

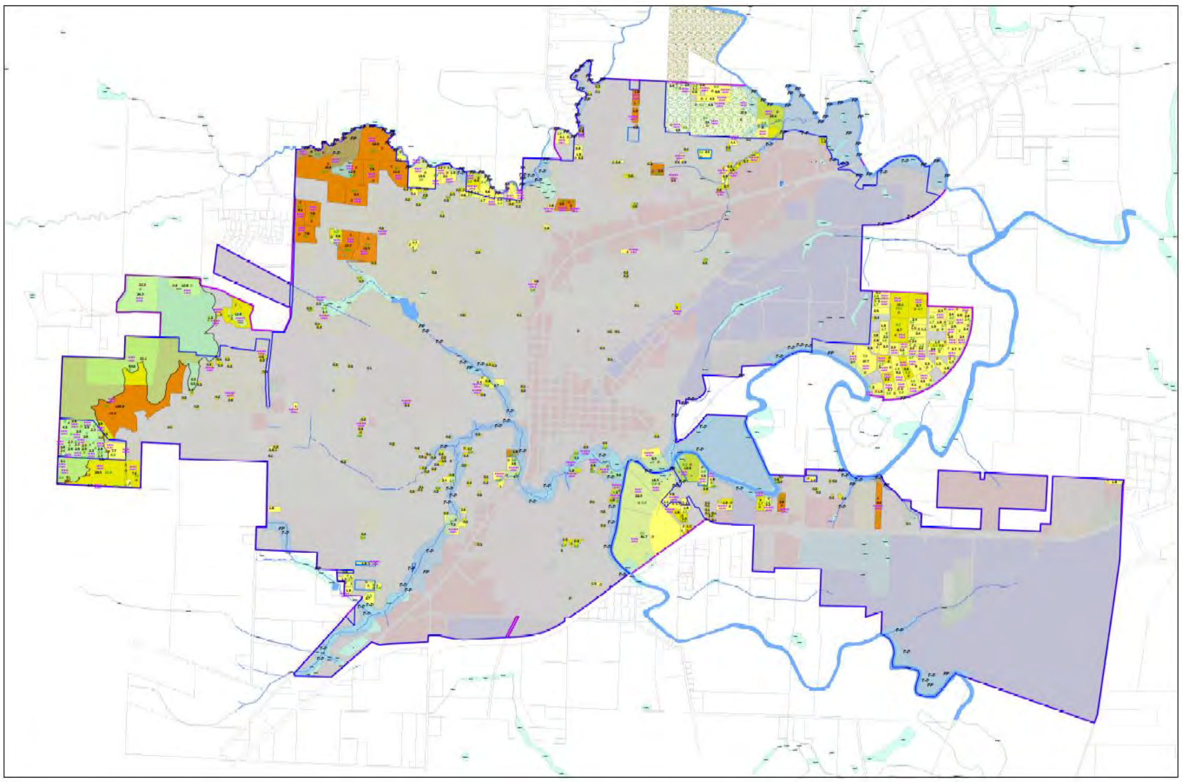
Intuitively, most people would think of further development on smaller lots with existing homes as infill or redevelopment. However, for purposes of the BLI, small properties under one-half acre with an existing home are classified as "developed," while small properties just over one-half acre and everything larger with a home are classified as "partially vacant." Developed properties aren't assumed to have further capacity other than an assumption and recognition that a percentage of those developed properties may have capacity for additional infill or redevelopment which may occur for a percentage of those lots during the 20-year planning period. However, if development occurs on a lot over one-half acre, that is technically considered "new development" rather than "infill or redevelopment" and treated the same per state law as larger greenfield development sites when considering capacity. That technical difference in terminology is significant, because <u>every</u> "partially vacant" property must be assumed to further develop during the 20-year planning period (unless surplus) in order to meet the identified housing need. This is important when considering the BLI, because any property owner decisions about whether those properties will actually develop additional dwellings during the 20-year planning period can't be considered. The result can be that "false capacity" may be assigned to those properties and tied up in those properties if they don't develop, rather than providing actual capacity through addition of lands that would be likely to actually develop over the 20-year period.

In addition, division of existing small parcels may be less likely to achieve needed density, because there is often fractional remnant acreage when an existing property further divides or develops that doesn't add additional capacity, whereas development of a larger property allows for establishment of efficient lots sizes and configurations that can more efficiently respond to and achieve the allowed density permitted by the zoning district.

These issues would be less of a concern if there were only a few small properties which are assigned capacity as "partially vacant" lots in the buildable land inventory. However, most of the land in the UGB has already developed, and most of the larger buildable properties in the UGB are already "entitled" for specific developments. Entitled properties are unlikely to have opportunity for increased capacity through enactment of efficiency measures. Much of the remaining buildable land in the UGB is within small properties. These make up a disproportionate share of the number of remaining properties classified as "buildable" within the UGB per state law.

BLI buildable acres in small lots and capacity assumptions

Most of the UGB is located within water pressure service Zone 1. Approximately 82% of the non-entitled tax lots classified as buildable land within Zone 1 are two acres or smaller, approximately 93% of these non-entitled tax lots are three acres or smaller, and approximately 97% of these non-entitled tax lots are 5 acres or smaller. Of these Zone 1 non-entitled tax lots with buildable acres of three acres or larger, only three properties are within City limits: one parcel between 3-4 acres, one parcel of about 7 acres, and one parcel of about 22 acres. The remainder are in the unincorporated UGB.



**Orange indicates entitled properties as of December 2019*

Non-Entitled
Approximate Zone 1 Buildable Acres, Residential
Total: ~348 Tax Lots

>20 ac: 2 properties (~43 ac)
22 ac (in city)
21 ac (out of city)

10-20 ac: 4 properties (~40 ac)
10 ac (out of city)
10 ac (out of city)
10 ac (out of city)
10 ac (out of city)

5-10 ac: 6 properties (~38 ac)
8 ac (out of city)
7 ac (in city)
7 ac (out of city)
6 ac (out of city)
5 ac (out of city)
5 ac (out of city)

2-5 ac: ~52 properties
4-5 ac: ~5 properties (~20 ac) (all 5 out of city)
3-4 ac: ~9 properties (~27 ac) (8 out of city, 1 in city)
2-3 ac: ~38 properties

0-2 ac: ~284 properties
1-2 ac: ~94 properties
0-1 ac: ~190 properties

Of the approximately 284 properties which have less than two unconstrainted acres, ~41 properties are in exception areas, and the remaining ~243 in other areas, predominantly within city limits. Those ~243 were assigned full capacity in the June 2019 Draft BLI, unlike the reductions described in this addendum for parcels smaller than 2 acres in exception areas.

Further, fractional acres in tax lots become aggregated in the BLI and capacity analysis, where compounding is more of an issue with a disproportionate number of smaller parcels, where fractional acres can't actually be aggregated into buildable acres since the properties are dispersed and non-contiguous. This can overstate capacity. These are classified as buildable, although most have an existing home, and are classified as partially vacant. Per the HB 2554 report, these smaller parcels less than two acres (190 tax lots with 0-1 acres, 94 tax lots with 1-2 acres) most with home, are unlikely to achieve full capacity, if any. Lots less than one-half acre with a home are already excluded from this total as "developed".

The analysis identified buildable acres on each parcel then aggregated into total buildable acres then multiplied by the respective density factor, therefore counting those fractional acres. If capacity is assigned for each tax lot, tossing out the fractional acres first then aggregating the capacity for each lot, that is a more accurate analysis of capacity, and will necessarily be lower than aggregating fractional acres. Historic analysis shows most new units on smaller properties result from land divisions rather than adding more dwellings to existing lots. The vast majority of capacity in smaller parcels during the historic analysis period was through land divisions – not by adding an additional dwelling to an existing lot or by subdividing these small lots (4 or more lots), but by partitioning (3 or fewer lots). However, that method presents issues for the BLI where buildable acres must be identified when calculating for middle housing that may not be on separate lots.

Staff conducted a review of historic partition activity to determine whether there were any implications for capacity assigned to smaller lots in city limits. Many properties that are partitioned are remnants of land divided through the old metes and bounds descriptions of dividing and describing properties, often rural properties that were added to the city and UGB over time or much older city properties. Many of these weren't divided with regard to current minimum lot sizes or current zoning. More recent land divisions have divided with respect to the zoning, often seeking to maximize the density by dividing into as many lots or parcels as allowed by the minimum lot size of the zone. The larger remnant properties within the UGB aren't increasing in number except if/when larger rural properties are added to the UGB, therefore their supply is decreasing over time. Essentially, nearly all of these smaller lots that still remain likely would have been existing at the time of the previous BLI, and still haven't been divided since then or during the last historic analysis period. These properties haven't divided since the last BLI, even during a period in which there has been a constrained land supply as evidenced by the prior and current BLI. This suggests that while they are classified as "buildable" per state law, the reality is they haven't been available for development. This artificially ties up capacity, which means other buildable land likely to be available for development during the planning period can't be brought into the UGB.

While not applied to the analysis in this addendum, this suggests that based on the HB 2554 findings, that the threshold for what is considered "developed" vs. "partially vacant" should be increased, or similar capacity adjustment should be codified, to account for the limited capacity actualized on smaller parcels. This would be analogous to the OAR 660-024-0067(6) provisions for exception area parcels less than two acres.

Note: *Many of these small parcels are classified as "partially vacant". The HNA uses the "safe harbor" <u>methodology</u> available to smaller cities, although this isn't an actual safe harbor for McMinnville due to its size. Classifying these lots as partially vacant and buildable means the HNA assumes <u>every one</u> must further develop in order to meet the identified housing needs over the next 20 years.*

Ideally, in light of real-world data about the further development potential of smaller lots and parcels, smaller properties would be re-evaluated to determine whether some of these should not be classified as buildable, or whether assumptions should be adjusted to allow assumptions about infill and redevelopment of smaller "partially vacant" parcels that are different than greenfield development - either assuming reduced capacity, or assuming only a percentage would be expected to develop during the planning period.

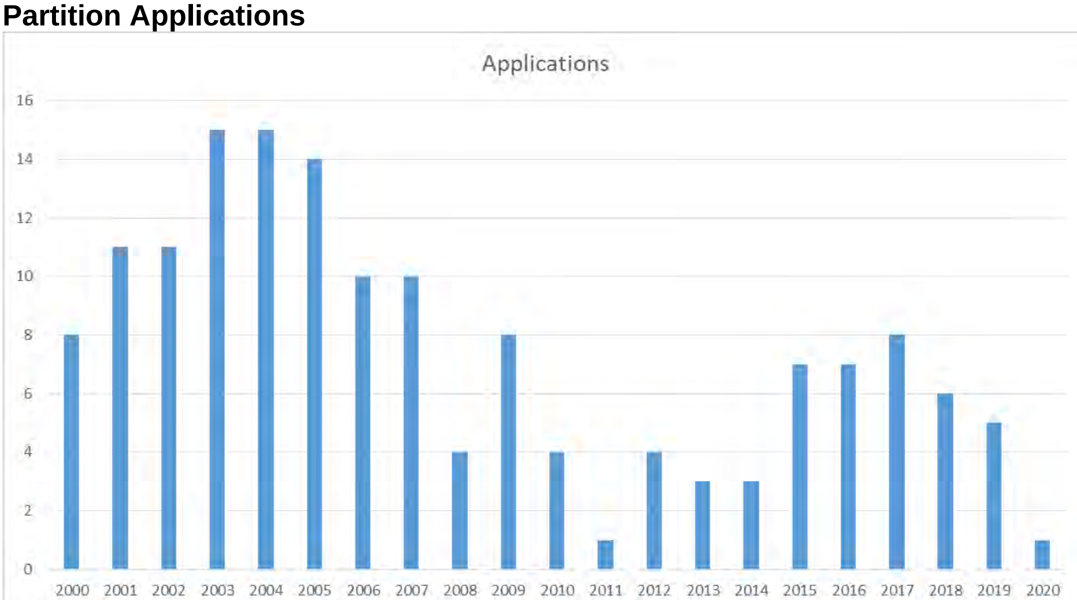
Historic Partition Activity

Additional development of partially vacant properties has typically occurred trough partitioning, and development of the resulting new parcels. In general, the supply of parcels that would further partition into 2 or 3 parcels is diminishing over time, typically a remnant of areas where the city grew into unplatted areas. Properties which are large enough to subdivide into four or more lots generally reflect the density of the zoning. Except for where new exception area lands are added to the UGB, the partitionable properties are largely a subset of the same supply of small parcels that existed during last planning horizon and historic analysis period.

During a planning period for which there was a deficit of buildable residential land, there was still only a small number of new properties created through partitioning, and many of these were to separate a parcel with an existing dwelling from 1 or 2 additional parcels. Some were to split properties that already had development on each new parcel.

- Partition records indicate that from 2000-2018, there were approximately 135 partition applications that would have created a total of 177 new parcels, excluding withdrawn applications. Of these, 34 applications were for parent parcels of 0.5 acres or less, 26 were 0.5-1 acre, and 78 were greater than 1 acre. About 48 of these were commercial/ industrial/ institutional /large multi-family housing sites. Additional partitions included in these figures were applications that adjusted large properties in preparation for subdivision phasing. Therefore, many of these partitions didn't create new buildable residential parcels. Further, some partitions didn't create any additional buildable capacity – they were sites already developed with two or more homes that were divided so there was one home on each parcel.
- Further, the partition activity peaked in 2003-2004, so the information should be analyzed to determine if this is due to a diminishing supply of smaller sites which are eligible or feasible for further land divisions.
- This suggests the assumptions regarding residential infill and redevelopment of 8% sued in the 2019 Draft HNA are high. This historic partitioning activity suggests infill and redevelopment consistent with the HB 2001 methodology is more appropriate.

Partition Applications



City of McMinnville Partition Applications 2000-2018
(Excludes Withdrawn Applications)

Total Partitions	Partitions by Parent Parcel Size <=0.5 ac	>0.5-1 ac	>1-2 ac	>2 ac	SUM -All	SUM <=2 ac
Number of partition applications (excluding withdrawn)	34	25	15	61	135	74
Number of additional parcels from partitioning	41	35	21	76	173	97
Total partition applications per year	1.8	1.3	0.8	3.2	7.1	3.9
Total additional parcels per year	2.2	1.8	1.1	4.0	9.1	5.1
Residential Partitions						
Number of residential partitions (includes zero lot line lots)	**32**	**23**	**11**	**9**	**75**	**66**
Number of new residential parcels*	**39**	**34**	**16**	**14**	**103**	**89**
Residential partitions per year	1.7	1.2	0.6	0.5	3.9	3.5
Additional residential parcels per year	2.1	1.8	0.8	0.7	5.4	4.7
Other Partitions						
Number of non-residential partitions**	2	2	4	38	46	8
Number of subdivision phasing partitions***	0	0	0	14	14	0
SUM of non-residential and subdivision phasing partitions	**2**	**2**	**4**	**52**	**60**	**8**

*Some partitions added no capacity: the parent parcel had more than one dwelling, and the partition split the dwellings onto separate parcels

**Approximately 46 partitions from 2000-2018 were commercial, industrial, institutional, or large multi-family sites

***Approximately 14 partitions were to adjust large properties in preparation for subdivision phasing

Acreage by Parent Parcel Size	Parent Parcel Acreage by Parent Parcel Size <=0.5 ac	>0.5-1 ac	>1-2 ac	>2 ac	SUM	
All	13	49	23	993	1,078	84
Residential only*	12	48	18	151	228	77
New residential parcels per acre	3.28	0.71	0.91	0.09	0.45	1.15

The table above shows that for residential partitions, on average, there were 1.15 new parcels per parent parcel acre (89/77) for the 2000-2018 period.

Most buildable residential lots which are developed are new vacant lots created through residential subdivisions. A small number of new parcels are created through partitioning. Most of those add new development capacity, but some are simply to split ownership of a parcel that has more than one existing dwelling so that each of the existing dwellings is on a separate parcel.

Approximately 3,038 new dwellings were added from 2000 to mid-2018. During the same time period, about 75 partition applications added 103 additional residential parcels. By definition, a partition adds 1 or 2 new parcels in addition to the original parcel. The average was 1.37 new parcels per partition application. If each new parcel was developed with a dwelling, that would account for 3.4% of new dwellings, which would be an average of 179 new dwellings, about 9.4 new dwelling per year; however, partitioning accounted for an average of only 5.4 new dwellings per year.

Partitions of parent parcels of less than one-half acre were accounted for in infill and redevelopment assumptions. Not all of new parcels below developed with new dwellings.

Over the 2000-2018 period, there were:

- 32 new partitions of residential parent parcels smaller than one-half acre in size, creating 39 additional parcels, averaging 2.1 per year.
- 23 new partitions of residential parent parcels of one-half acre to one acre, creating 34 additional parcels, averaging 1.8 per year.
- 11 new partitions of residential parent parcels of one to two acres in size, creating 16 additional parcels, averaging 0.8 per year.

- 9 new partitions of residential parent parcels larger than two acres in size, creating 14 additional parcels, averaging 0.7 per year.

Non-Entitled Properties in the UGB

The following table summarize the non-entitled properties in the UGB by size class.

Size	Total		Entitled		Non-Entitled	
	TLs	Bld Ac	TLs	Bld Ac	TLs	Bld Ac
<=0.5 bld ac	193	84	3	1	190	83
>0.5-1 bld ac	66	47	1	1	65	46
>1-2 bld ac	50	75	3	6	47	69
>2 bld ac	63	438	16	198	47	241
SUM	**372**	**644**	**23**	**205**	**349**	**439**

The subtotal of properties 0-2 acres is approximately 309 tax lots classified as vacant or partially vacant (193 TLs <0.5 acres, 66 TLs 0.5-1 acres, and 50 TLs 1-2 acres, with buildable acres between 0-2 acres totaling about 206 buildable acres ac (84 buildable acres in 193 TLs with 0-0.5 buildable acres, 47 buildable acres in 66 TLs with 0.5-1 buildable acres, and 75 buildable acres in 50 TLs with 1-2 buildable acres). This already excludes developed parcels <1/2 acre with an existing dwelling.

This section only adjusts capacity for non-entitled small lots in non-exception areas, so a subset of tax lots in non-exception areas is identified.

The assumptions in the June 2019 Draft HNA assumed the following capacity on vacant and partially vacant non-exception area properties smaller than 2 acres by zone, yielding 366 dwelling units of capacity.

Capacity of Vac. & Part. Vac. Tax Lots <=2 tot ac in UGB Non-Exception Areas by Zone

	Vac/PV <=2 ac		Vacant <=2 ac		PV <=2 ac			Vac&PV	Vac	PV
Zone	TLs	Bld. Ac.	TLs	Bld. Ac.	TLs	Bld. Ac	DU/Gross Ac	Cap (Dus)	Cap (Dus)	Cap (Dus)
R-1	81	30	60	13	21	17	3.1	93	41	53
R-2	75	21	67	15	8	6	4.3	90	64	25
R-3	20	6	18	5	2	1	4.8	29	22	6
R-4	36	10	34	9	2	1	6.1	61	54	9
County	21	19	6	5	15	14	4.9	93	25	66
SUM	**233**	**86**	**185**	**47**	**48**	**39**		**366**	**205**	**158**

Based on the analysis of historic partitions and development of vacant and partially vacant tax lots smaller than 2 total acres within the UGB in non-exception areas, the following revised assumptions are used for the baseline capacity analysis instead of the assumptions used in the June 2019 Draft HNA:

- ***Vacant*** lots less than 2 acres will be assumed to develop at the historic density by zone. This is the same assumption as the original methodology for these lots, yielding 205 new dwellings.

- ***Partially vacant*** lots less than 2 acres will be assumed to further develop through partitioning and development, consistent with the analysis above for historic partition activity: there are 39 buildable acres, and these will yield an average of 1.15 new parcels per parent parcel acre, and each new parcel will be assumed to yield a new dwelling. This assumption yields 45 new dwellings on these lots. These parcels were assumed to yield 158 dwellings using the original methodology.

- ***Together***, this yields 251 dwellings (with rounding differences) for tax lots smaller than 2 acres in non-exception areas, which are calculated separately. This is 115 fewer dwellings on these properties (251 dwellings vs. 366 dwellings).

5. Capacity for Already-Platted Vacant Lots within Landslide Constraint Area

Some vacant lots that were already platted in a subdivision were assigned no capacity because they were within the landslide constraint area. These lots are able to develop subject to approved geotechnical analysis, so these lots are assigned capacity consistent with the subdivision approval. 19 lots were affected, so the capacity is increased from 0 dwellings to 19 dwellings for these lots (1 dwelling for each lot).

Any other constraints and hazards not addressed in the June 2019 HNA or herein would be analyzed and addressed separately, and are not addressed herein.

Summary of Results

With each of the revisions above reflected in the BLI and capacity analysis, the aggregate results are as follows:

- **Revised Capacity of UGB Lands:** 2,129 DUs
- **Total Housing Need:** 5,269 (unchanged)
- **Revised Demand on Vacant/Partially Vacant Land:** 5,182 DUs
- **Deficit:** 2,129-5182= -3,053 DUs

2041 Deficit, Gross Buildable Acres:

@4.9 avg historic density: -623 ac
@5.3 needed density: -576 ac

This is summarized in the following table.

2018-2041 Residential Capacity Analysis Revisions

Component	Description	Capacity - Dwelling Units		
		Original	Revised	Difference
2018 Capacity				
Total Relative to June 2019 Draft HNA		2,921	**2,129**	(792)

Additional Considerations

This Addendum provides the amended baseline capacity analysis. The City has estimated a target future "needed density" of 5.3 du/gross acre, which applies to "buildable land," excluding development assumed to occur through infill and redevelopment on properties classified as developed. This is an 8% increase over the historic average density of 4.9 du/gross acre. Given limitations on buildable lands within the current UGB, since the majority of lands are developed, there will be challenges in "bending the curve" to achieve significant efficiencies and additional density on lands already within the UGB. Additional density will likely need to be achieved on land to be added to the UGB. Much of the buildable land already within the UGB includes limitations, including:

- **Entitlements.** A substantial portion of the remaining buildable land within the UGB is in properties which already have entitled land use decisions that already establish the development densities, where it unlikely that new efficiency measures would influence the capacity of those entitled approvals.

- **Exception Lands.** Consistent with the OAR analysis provided herein, the majority of exception lands that were brought into the UGB are substantially parcelized and already developed with homes, distributed in a pattern which limits the likelihood that extension of urban services for the limited amount of incremental development that would occur, or that higher densities would be achieved. These properties have developed because they didn't require service extensions, using on-site private wells and septic systems instead and served by rural streets. The incremental amount of additional development capacity compared to what has already developed makes the prospect of sewer, water, storm water, and city standard street improvements challenging given that the costs would be needed within an area that is significantly developed, where cost can't now be easily captured from existing development that has already occurred.

- **Small Lots.** A substantial number of the buildable lots are small city lots with existing homes, classified as "partially vacant" buildable land which exceed the size threshold to be classified as "developed", but which are unlikely to all develop during the planning period or achieve "needed density," despite the assumptions required by state law that they must all be classified as buildable and assumed to develop during the 20-year planning period in order to meet the identified housing needs for that period.

- **Infrastructure Capacity Limitations.** The few larger properties within the UGB which are not already entitled would have the greatest likelihood for efficiency measures that would have a greater likelihood of achieving increased capacity. However, several of those have infrastructure capacity limitations that present limitations to density and capacity increases through efficiency measures. For example, sewer modeling is typically based on historic density achieved by zone rather than maximum density permitted by zone. In many cases, there is insufficient sewer capacity to build to the maximum density permitted by the zoning, let alone higher densities associated with potential upzoning.

Because the City completed the June 2019 Draft HNA prior to enactment of HB 2001, and with the above limitations, the Draft HNA doesn't include assumptions for increased capacity for residential buildable lands within the UGB in excess of historic density based on existing zoning. It provides a baseline capacity analysis. The baseline capacity analysis is based on the existing zoning of lands in the UGB.

The City is continuing to evaluate efficiency measures identified in the June 2019 Draft Housing Strategy. The greatest likelihood for achieving the identified "needed density" for the needed number of new housing units would result from inclusion of buildable lands in the UGB for which there are greater opportunities for efficiencies associated with new master planned development on larger properties.

Exhibits 94 and 96 provide the capacity of buildable lands within the UGB based on the historic density. Exhibit 96 also summarizes capacity of land within the UGB for historic density of 4.9 du/gross acre and for needed density of 5.3 du/gross acre.

Table of Contents

1. Introduction

In 2018, the City of McMinnville received a Technical Assistance planning grant from the Department of Land Conservation and Development (DLCD) to develop a buildable land inventory (BLI), housing needs analysis (HNA), and housing strategy. The BLI and HNA determine whether the City has enough land to accommodate 20-years of population and housing growth. They also address needs for 5-, 10-, and 46-year periods. The BLI and HNA also provide the basis for an update to the City's Comprehensive Plan Housing Element, as well as the basis for developing a Housing Strategy to respond to the identified housing need. While the BLI and HNA predominantly provide the quantitative basis, the Housing Strategy addresses qualitative issues about how the City will plan for those needs, including policies to ensure the community achieves enduring value for future generations.

This work was undertaken with guidance by a Project Advisory Committee through a series of meetings, recommendations, and decision points. The project also included broader outreach with a focus group and public open house to seek input on housing needs and strategies to address identified needs.

Importantly, the housing strategy recognizes that the city does not build housing, but rather provides the regulatory framework in which housing is built. The first part of the strategy focuses on land use tools to ensure there is adequate land planned and zoned to meet the community's future housing needs, promoting opportunities for a variety of housing types, whether market rate or subsidized housing. This strategy further strives to provide opportunities for lower-cost market rate housing to the extent possible to achieve more housing affordability without reliance on subsidies if and when possible. However, it is recognized that housing for those with the lowest incomes is unlikely to be achieved at market rates, and will require some housing provided through affordable housing models that also include subsidized housing, choice vouchers, "sweat equity," etc. Unfortunately, in a community the size of McMinnville there are very few resources available to subsidize housing and without the requested changes in HB 2997 2019, allowing McMinnville to implement inclusionary zoning on housing developments for affordable housing, McMinnville has very few regulatory tools to mandate affordable housing. Like many smaller cities in Oregon, McMinnville will continue to face significant challenges providing subsidized housing for its residents with the lowest incomes.

The City is committed to working hard to ensure that every resident in McMinnville has a great neighborhood in which to live. Recently, the City adopted its Great Neighborhood Principles, thirteen principles of neighborhood development describing what makes a great neighborhood in McMinnville, with a goal of inclusivity and providing a great neighborhood for every resident to live in regardless of income. *See Exhibit 1.*

Exhibit 1. Summary of McMinnville's Great Neighborhood Principles

McMinnville's Great Neighborhood Principles will guide land use patterns, design, and development of the places where McMinnville citizens live, work, and play.

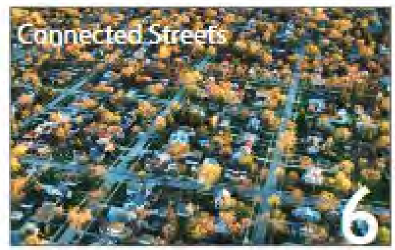
Great Neighborhoods are sensitive to the natural conditions and features of the land.

Great Neighborhoods preserve scenic views in areas that everyone can access.

Great Neighborhoods have open and recreational spaces to walk, play, gather, and commune as a neighborhood.

Great Neighborhoods are pedestrian friendly for people of all ages and abilities.

Great Neighborhoods are bike friendly for people of all ages and abilities.



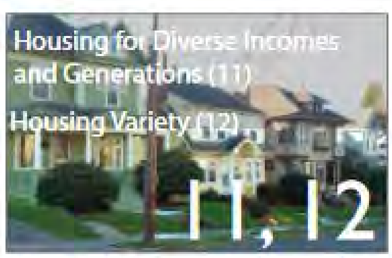
Great Neighborhoods have interconnected streets that provide safe travel route options, increased connectivity between places and destinations, and easy pedestrian and bike use.

Great Neighborhoods are designed to be accessible and allow for ease of use for people of all ages and abilities.

Great Neighborhoods have buildings and spaces that are designed to be comfortable at a human scale and that foster human interaction within the built environment.

Great Neighborhoods provide easy and convenient access to many of the destinations, activities, and local services that residents use on a daily basis.

Great Neighborhoods complement adjacent rural areas and transition between urban and rural uses.



11 - Great Neighborhoods provide housing opportunities for people and families in all stages of life.

12 - Great Neighborhoods have a variety of building forms and architectural variety to avoid monoculture design.

Great Neighborhoods have unique features, designs, and focal points to create neighborhood character and identity.

McMinnville's housing strategy strives to make transformational and fundamental changes to the Comprehensive Plan and Zoning Ordinance to ensure policies and regulations that provide neighborhoods with a variety of housing types, income levels and generations, rather than the homogeneous neighborhoods defined by Euclidean zoning.

Traditionally, when communities undertake their Housing Needs Analysis and Housing Strategy, they determine what the make-up of the future population is for the community and evaluate how they are going to meet the needs of that future population by identifying the types of housing they will encourage through their policies and housing strategy. Typically, the assumption is that the higher density housing is more affordable and therefore multi-family is the most affordable housing type to serve the population base on the lower end of the affordability spectrum (*see* **Exhibit 2***)*. However, that does not always bear true in reality and may be what had led to some of the affordable housing issues.

With this Housing Strategy, the City intends to dispel the notion that each of the major categories of needed housing types described in ORS 197.303(1)(a) (single family detached, single family attached and multi-family) is a proxy for a level of affordability (see **Exhibit 2***)*. Rather, it is recognized that there is a wide range of affordability within each of these major housing types, and communities should have housing strategies that promote housing choices in terms of housing types and in terms of ownership or rental, regardless of income. People are making their housing choices based upon two factors: 1) what they can afford; and 2) how they prefer to live (rental versus ownership, detached versus attached housing). Ideally a housing strategy would provide housing at all income levels that provide choices for all preferences (see **Exhibit 3***)*. There is not one "right" way to meet housing needs. **Exhibit 4** provides a conceptual illustration of how different communities might address housing needs in very different ways.

Exhibit 2. Relationships between affordability, housing type, and strategy in the traditional statutory model

Assumptions Inherent in Traditional Statutory Model			
	Less Affordable ←→ **More Affordable**		
	1	**2**	**3**
A-Housing Type	Single-Family Detached	Single-Family Attached	Multi-Family
B-Density	Low Density	Medium Density	High Density
C-Affordability	High Cost	Medium Cost	Low Cost
Strategy	↓	↓	↓
Housing Mix Strategy	Reduce Share Compared to Historic	Increase Share Compared to Historic	Increase Share Compared to Historic
Housing Density Strategy	Increase Density of SFD	Increase Density of SFA	Increase Density of MFH
Leads To:	↓	↓	↓
Presumptive Outcome	• Lower % SFD in Mix • Increase Density of SFD • Lower Cost: • Less of the most expensive housing type • Make this housing type more affordable by increasing its density	• Greater % SFA in Mix • Increase Density of SFA • Lower Cost: • More of a more afford. housing type • Make this housing type more affordable by increasing its density	• Greater % of MFH in Mix • Increase Density of MFH • Lower Cost: • More of the most afford. housing type • Make this housing type more affordable by increasing its density
Action:	"Lock In" a mix and density, and determine how to achieve those with the strategy

Exhibit 4. Spatial models of housing density

Provision of housing is accomplished by a wide variety of organizations including the City, builders, housing providers, and other organizations. Municipalities must fulfill certain requirements under state law and can choose to undertake additional roles to help achieve development of needed housing.

- **The City of McMinnville's Primary Role: Land Use Planning & Growth Management.** The City has a responsibility under state law to manage land use and development, including land and backbone infrastructure for housing. The City does this through its Comprehensive Plan and land use regulations. The City must adopt and amend plans to ensure an adequate supply of land zoned to accommodate needed housing, together with supporting infrastructure. Plans must be compliant with state and federal law, while reflecting local values and vision for a livable community.

- **The City of McMinnville's Potential Roles.** The City does not build housing. In addition to its primary role in managing growth, the City may employ additional strategies to help builders and housing providers deliver market-rate and subsidized housing. Evaluation of these strategies, including evaluation of implementation options, are typically the basis for the work plans various City committees carry out with the appropriate charge. City committees generally include representatives of organizational partners.

Housing Strategic Priorities

Through the technical analysis of the Housing Needs Analysis and input from the Project Advisory Committee, the City identified four strategic priorities (SP). In light of Council's adoption of the Great Neighborhood Principals, the Housing Strategy includes a fifth priority to address urban form. The strategic priorities are listed below.

- **Land Availability (SP1):** This strategic priority focuses on strategies that ensure an adequate land supply—not just a 20-year supply as Goal 10 requires, but also a pipeline of serviced land that is available for immediate development. Strategies include tools such as boundary amendments to expand the urban area, map amendments to increase density or amount of residentially zoned, and policy and code amendments to address development standards related to uses, density, and lot sizes. This Strategic Priority focuses on land supply, capacity, and availability.
- **Wider Variety of Housing Types (SP2):** This strategic priority intends to allow and encourage a wider array of housing types. This includes all needed housing types identified in ORS 197.303 and include tools to achieve a wider variety of housing types. The city has already adopted some of these tools such as allowing corner duplexes and accessory dwelling units. Other tools include expanding the types of housing allowed in low density zones, and allowing housing types such as cottage housing, tiny homes, and co-housing.
- **Housing Affordability (SP3):** This strategic priority focuses on McMinnville's housing affordability issues. Much of that work is already underway with the council-appointed Affordable Housing Task Force.[1] This housing strategy is coordinated with that effort but does not intend to duplicate past or future efforts of the Task Force. As such, this housing strategy focuses on a narrow range of strategies which may complement or supplement Task Force efforts.
- **Infrastructure & Public Facilities (SP4):** This strategic priority focuses on ensuring that adequate and cost-effective infrastructure and public facilities are available to support new housing. It includes provision of services by the City and other services providers, including transportation, water, wastewater, stormwater, and parks functional plans. There are two predominant aspects to this strategic priority. First, as the City evaluates opportunities to meet needs within the current UGB, it is necessary to identify and

[1] https://www.mcminnvilleoregon.gov/mahtf/page/mcminnville-affordable-housing-task-force-27

evaluate existing infrastructure & public facilities planning assumptions, capacity, and potential constraints which may need to be resolved to facilitate housing at authorized densities, opportunities for infill and redevelopment, up-zoning, and/or special area planning that may incorporate housing or mixed-use development. Second, it will be necessary to evaluate infrastructure & public facilities needs associated with future expansion areas, including potential Urban Reserve and UGB expansion areas. Some of these issues may overlap, as there could be some cases where "downstream" capacity considerations might affect additional growth whether within the current UGB or in future expansion areas.

- **Urban Form (SP5):** This strategic priority focuses on preserving McMinnville's character. The adoption of the Great Neighborhood Principles provides the foundation. This strategic priority includes strategies that preserve the character of existing neighborhoods while allowing new housing, and strategies that ensure that the Great Neighborhood principles are reflected in new development, in the unincorporated areas of the UGB, and in future expansion areas. *See* **Exhibit 4**.

Each of the strategies and actions aligns with one or more strategic priorities.

2. The McMinnville Housing Strategy

This Housing Strategy is an action plan. Accordingly, herein, the individual strategies and tools have been re-organized into **Strategies** and **Actions**. Each strategy includes individual actions grouped together as a series of tasks. When necessary these have been organized into a series of sequential tasks when there are task dependencies that drive the order of the work. There may also be certain efficiencies where there are similar tasks for more than one strategy that could be carried out at the same time to address similar issues for multiple strategies.

Organizing strategies into these groups also provides a specific context for individual strategies. The same strategy might be implemented differently depending on the specific context and objective to be achieved. For example, planning for a "diverse housing type" zone might be accomplished the same way throughout the UGB, or it might be tailored and accomplished one way for infill and redevelopment and a different way for new lands brought into the UGB. Grouping of strategies is also intended to help develop interdepartmental work plans, schedule work, assign resources, and identify budget needs.

In addition to the 20-year Housing Needs Analysis required by state law for UGB planning, the City also conducted the BLI and HNA to include analysis of land supply and housing needs for 5-, 10-, and 46- year periods to facilitate development of short-, medium-, and long-term strategies which are responsive to different needs, issues, and constraints associated with each of these time periods.

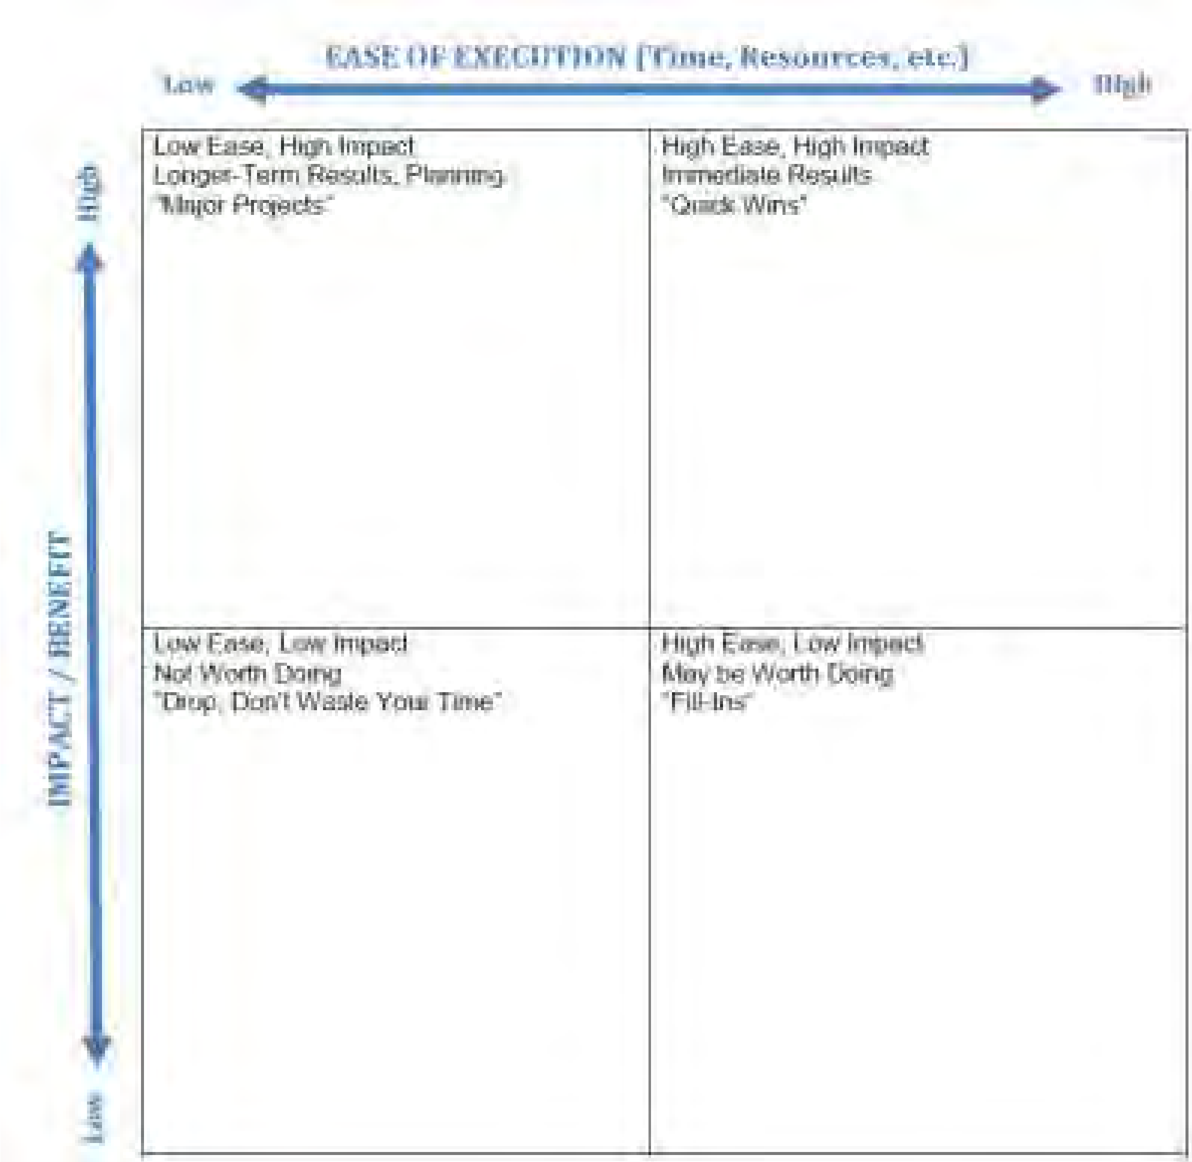
The McMinnville Housing Strategy was developed over the course of several meetings with the Project Advisory Committee. The committee reviewed key issues and prioritized more than 80 potential land-use and non-land-use actions. The following supporting materials from the PAC meeting are included as appendices to this document:

- **Appendix A.** Table 1. Issues Associated with Strategic Priorities. This table identifies issues from the BLI and HNA and also evaluates current conditions; existing plans, policies, and regulations; and new state law that might be addressed as part of the housing strategy.
- **Appendix B.** Table 2. McMinnville Housing Strategy – Potential Strategies and Actions. This table lists each strategy and cross references it with strategic priorities, applicability to affordability groups, applicability to short/medium/long term needs and issues, and other factors.
- **Appendix C.** Table 3. Description of Potential Strategies and Actions. This table provides more detailed descriptions of the potential housing strategies and actions listed in Table 2. In addition, the table provides further information about the potential scale of impact of the strategy.

The Strategies and Actions described below cross-reference with the tables in the appendices (where appropriate) and are identified by their numerical reference (for example A1). In some instances, additional implementation actions or tasks which are necessary as part of a strategy were identified. Any additional actions do not have a cross-reference.

Further, committee members were presented with an "ease/impact" matrix to assist with prioritizing the most impactful strategies and were also asked to consider how long it would take to complete work and realize benefits of a strategy once initiated until completion, which might require early initiation. This is discussed at a high level under the headings for the strategies below.

Exhibit 5. Ease/Impact Prioritization Matrix



Strategies and Actions

The following strategies and actions have been identified to respond to McMinnville's future housing need and will be further evaluated by the appropriate City committees, with public processes, research, and an opportunities and constraints analysis. The strategies and actions were discussed and prioritized by the PAC. Implementation may also identify other key strategies and actions that need to be undertaken as part of a group of strategies undertaken together. Note that some individual actions may be part of more than one strategy.

Based on the City's roles in addressing housing needs described above, the strategies in each exhibit are grouped into two broad categories:

- **Land Use Strategies. (Shown in green headings).** These are related to the City's primary role of land use planning and management.

- **Other, Non-Land Use Strategies. (Shown in orange headings).** These are other strategies the City may employ to help builders and housing providers deliver needed housing. These strategies must still all occur within the parameters of the land use framework. Some of these strategies are also used by other organizations and partners involved in provision of housing.

Land Use Strategies

Strategy 1. Growth Planning

Summary: This strategy focuses on increasing the supply of buildable lands and conducting all of the associated planning and implementation tasks which are required.

This strategy will predominantly address Strategic Priority 1: Land Availability. It will also address issues of Infrastructure & Public Facilities. It is also a prerequisite to being able to address many of the strategic priorities and address a wide variety of affordability objectives. This Strategy is low ease / high impact. This work needs to be started/continued in the short-term because it will take years before the results / benefits are realized. Many of the following actions include additional planning and implementation actions.

Potential Actions or Projects:

1.1 **Develop an Urban Reserve Area (URA) (E36).** Cities may establish Urban Reserve Areas (URAs) for a period of up to 30 years beyond the Urban Growth Boundary (UGB) planning period of 20 years, for a combined period of up to 50 years. These become the highest priority lands for future UGB expansions. Urban Reserve Areas provide an opportunity for efficient infrastructure planning and future urbanization.

1.2 **Establish a Framework Plan for the URA (E37).** A framework plan identifies the major land uses, transportation backbone, infrastructure needs, and sequencing for the long-term growth within the URA. As these lands come into the UGB, area plans will be developed to ensure land uses and housing are provided consistent with the long-term framework plan.

1.3 **Identify an Expanded UGB per the URA (E38).** Urban Reserve Planning helps guide where to establish an Urban Growth Boundary to meet needs for the 20-year planning period. In addition to other applicable law, this action could also potentially establish local criteria for housing affordability as part of the UGB expansion process.

1.4 **Develop Area Plans for UGB Lands Identifying Housing Opportunities (E39).** Area plans for the UGB refine the framework plan into a more detailed land use plan for areas within the UGB. Development proposals would require master plans consistent with the area plans.

1.5 **Conduct Infrastructure Planning for URA and UGB Areas (Update infrastructure plans for growth lands) (D29)**. Infrastructure plans are generally sized with capacity for build-out of the Urban Growth Boundary. Expansion of the UGB will necessitate updates to the public facility plans to provide capacity to serve new areas. Infrastructure planning can also be sized to accommodate future growth within designated Urban Reserve Areas, providing for more cost-efficient provision of services.

1.6 **Update Goal 5 Natural Resource Planning & Policies, incl. Wetlands and Riparian Areas (F41).** The City has not adopted certain local "Goal 5" resource policies, which will be required, including a Local Wetland Inventory (LWI) and standards for riparian corridors. These will further affect or inform the capacity of lands within the UGB and future growth areas.

1.7. **Update Goal 7 Hazards Planning & Policies, incl. Landslide Susceptibility (F42).** The City has not adopted certain local "Goal 7" policies for hazards, including areas mapped by DOGAMI (The Oregon Department of Geology and Mineral Industries) as high landslide susceptibility. DOGAMI is in the process of refining their mapping which will further inform this work, which could affect or inform the capacity of lands within the UGB and future growth areas.

1.8. **Review and Update City/County Urban Growth Management Agreement (UGMA) if needed**. The UGMA defines planning authorities and procedures between the city and Yamhill County for the unincorporated areas of the UGB.

1.9. **Implement Great Neighborhood Principles (C26).** In April 2019, the City adopted Great Neighborhood Principles (GNP) and associated policies as part of the Comprehensive Plan. Some of these policies address mixed income and mixed housing neighborhoods. These policies will need to be implemented with code amendments, which can include other strategies, such as Strategy A2 to achieve a Diverse Housing Zone.

1.10. **Create a Diverse Housing Zone (A2).** Explore residential zoning with targeted/ minimum density and multiple allowed housing types. This zone would authorize a variety of housing types and sub-types including single-family detached and attached and multi-family housing types (such as duplexes, triplexes and quad-plexes, and cottage clusters). In contrast to traditional zoning, this strategy would be used to implement Great Neighborhood Principles (GNP), including the framework and area planning for growth areas, to specify a housing mix and associated average density that would need to be achieved in an area.

1.11. **Develop a High-Density Residential Zone (A3).** This strategy would be used in conjunction with and to complement the Great Neighborhood Principles and diverse housing zone (A2) to provide for higher density housing types in specific areas, such as more dense core areas, centers, nodes, etc. which would be higher density than the densities for housing types which would be incorporated on smaller lots within the diverse housing zone, such as duplexes, cottages, townhomes, row houses, and tri- and quad-plexes.

1.12. **Develop Annexation Process to Mandate Housing Types Upon Annexation per Area Plans (E40).** Lands brought into the UGB are placed in an urban holding zone, allowing for annexation phasing plans. Annexation would require master plan approval addressing required housing mix and average density, site design, and development standards.

Exhibit 6. Summary of Potential Actions or Projects

1.8	Review and Update City/County IGA if needed		X	
1.9	B26. Establish Guidance on Implementation of Great Neighborhood Principles That Will Inform Land Use for Urban Reserves and UGB.	X		
1.10/1.11	A2 & A3. Establish Provisions in the Zoning Ordinance for a New "Diverse Housing" Zone and a New "High Density" Zone	X		
1.12	E40. Establish Requirements for Master Planning Prior to Annexation to Ensure Areas Will Be Consistent with Framework and Area Plans, Great Neighborhood Principles, and Affordability Targets.		X	

Strategy 2. Housing Development in Existing UGB

Summary: This strategy focuses on increasing the capacity of lands already inside the UGB for residential development. Some of the actions may also have capacity benefits for future lands not already in the UGB.

This strategy addresses Strategic Priorities 1 (Land Availability) and 5 (Urban Form). This strategy seeks to achieve more efficient use of land within the current UGB through more efficient land use – which is also required by Goal 14 and ORS 197.296. It helps address short-term needs, and it addresses urban form through decisions implementing policies for Great Neighborhood Principles within the current UGB.

This strategy is low and high ease / high impact. This work needs to be started/continued in the short-term and may see both immediate as well as long-term results.

Potential Actions or Projects:

2.1 **Create a Diverse Housing Zone (A2).** Explore residential zoning with targeted/ minimum density and multiple allowed housing both within existing zones and in a new zone as applicable. This zone would authorize a variety of housing types and sub-types including single-family detached and attached and multi-family housing types, such as duplexes, cottages, townhomes, row houses, and tri- and quad-plexes. In contrast to traditional zoning, this strategy would be used to implement Great Neighborhood Principles (GNP).

2.2 **Develop a High-Density Residential Zone (A3).** This strategy would be used in conjunction with and to complement the Great Neighborhood Principles and diverse housing zone (A2) to provide for higher density housing types in specific areas, such as more dense core areas, centers, nodes, etc. which would be higher density than the densities for housing types such as such as duplexes, cottages, townhomes, row houses, and tri- and quad-plexes which would be incorporated on smaller lots within the diverse housing zone.

2.3 **Provide Density Bonuses to Developers (A15).** The local government allows developers to build housing at densities higher than are usually allowed by the underlying zoning. Density bonuses are commonly used as a tool to encourage greater housing density in desired areas, provided certain requirements are met. This strategy is generally implemented through provisions of the local zoning code and is allowed in appropriate residential zones. Bonus densities can also be used to encourage development of low-income or workforce affordable housing. An affordable housing bonus, if the proposed project provides a certain amount affordable units, would allow more housing units to be built than what would be allowed by zoning.

2.4 **Promote Infill Development, Allowing Flexibility in Existing Zones with Appropriate Design and Development Standards (A13).** This policy seeks to maximize the use of lands that are fully developed or underdeveloped and makes use of existing infrastructure by identifying and implementing policies that (1) improve market opportunities and (2) reduce impediments to development in areas suitable for infill or redevelopment.

2.5 **Update Infrastructure Plans for Infill Development (D28).** In some developed areas, infrastructure plans including waste water collection and transportation may have assumed no additional development and were not planned for infill and redevelopment to higher intensity. Further, in undeveloped areas, these plans may have assumed growth would occur at historic densities, which may be less than the maximum density permitted by zoning, limiting density of new development where there may be a desire to encourage infill and redevelopment.

2.6 **Implement Great Neighborhood Principles (C26).** In April 2019, the City adopted Great Neighborhood Principles (GNP) and associated policies as part of the Comprehensive Plan. Some of these policies address mixed income and mixed housing neighborhoods. These policies will need to be implemented with code amendments, which can include other strategies, such as Strategy A2 to achieve a Diverse Housing Zone and A13 to promote infill development with appropriate design and development standards.

2.7 **Re-designate or Rezone Land for Housing (A1).** The types of land rezoned for housing are vacant or partially vacant low-density residential and employment land rezoned to multifamily or mixed use. In rezoning land, it is important to choose land in a compatible location. When rezoning employment land, it is best to select land with limited employment capacity (e.g., smaller parcels) in areas where multifamily housing would be compatible (e.g., along transit corridors or in employment centers that would benefit from new housing). This policy change increases opportunity for comparatively affordable multifamily housing and provides opportunities for mixing residential and other compatible uses.

Exhibit 7. Summary of Potential Actions or Projects

2.7	A1. Re-designate or Rezone Land for Housing		X	

Strategy 3. Infrastructure & Public Facilities Planning

Summary: This strategy would provide data to help inform decision-making about where there might already be infrastructure capacity that could accommodate additional growth or make adjustments to capital projects already identified in infrastructure plans that haven't yet been built, to achieve efficiencies and add capacity.

As special area planning has been undertaken, and as higher density development applications have been submitted, there has been additional ad-hoc infrastructure analysis that indicates there may be limitations to capacity to serve new development consistent with zoned densities, through infill and redevelopment, within special area planning areas, or through up-zoning. Sufficiency of infrastructure capacity and public facilities will also be a factor in evaluating future growth areas.

This strategy should be undertaken early as a prerequisite to other projects. It will provide information needed to help inform other work. This strategy has the potential to help meet short-term needs as well as address longer-term infrastructure and public facility needs.

This strategy is low and high ease / high impact. This work needs to be started/continued in the short-term and may see both immediate as well as long term results.

Potential Actions or Projects:

3.1 **Assess Infrastructure Capacity to Support Infill (D28, Supports D30, D35).** This is a variation on option D28 & D30. It will provide data to help support other efforts that could Use a "value engineering" approach to determine available capacity or potential infrastructure projects to add capacity and identify areas that could be used for infill/redevelopment, up-zoning, more efficient use, etc., possible reallocation of density etc. The intent is to identify where capacity exists and consider land use options that might capitalize on that capacity. It could also help identify areas with known limited capacity, where plans already include projects for maintenance or some new capacity, and whether those improvements could upsize the same planned improvement to achieve more capacity if there are areas that could be up-zoned, etc.

3.2 **Repeal Outdated Policies Related to Old Sewer Treatment Capacity Limits (C27).** Previously, the City's sewer treatment plant (water reclamation facility) had limitations on treatment capacity, and the City established policies that limited density in certain areas commensurate with the treatment capacity limitations. The treatment capacity of the plant has increased, and those limitations are no longer necessary, and should be repealed.

3.3 **Identity Issues and Plan for Water Zone 2 Infrastructure Improvements (D34).** The western portion of the UGB is at a higher elevation which requires separate infrastructure for water service within Water Service Pressure Zone 2, which will require a new water storage tank. Buildable lands within the UGB which area in Zone 2 will be unavailable for development until they can be served with water. The investment in the Zone 2 water infrastructure won't occur without sufficient area and timely development to help fund the necessary water infrastructure.

3.4 **Develop Infrastructure Allocation Policies (D30).** If there are current infrastructure capacity limits, developing policies to allocate the capacity can provide greater certainty about capacity and allowable density of development phasing in the short term, in support of development, redevelopment, and infill priorities.

3.5 **Identify Areas with Underutilized Infrastructure Capacity (D35).** Areas with underutilized infrastructure capacity may be evaluated as candidates for additional development intensity of vacant lands or infill and redevelopment opportunities in developed areas.

3.6 **Encourage "To and Through" Infrastructure Policies (D33).** These policies ensure infrastructure extensions are sized to serve development as well as to extend beyond the development in the future to serve outlying properties.

Exhibit 8. Summary of Potential Actions or Projects

Reference	Tasks or Projects	Time Period		
		Near-term	Mid-term	Long-term
3.1	D28. Assess Infrastructure Capacity to Support Infill	X		
3.2	C27. Repeal Outdated Comprehensive Plan Policies Related to Old Sewer Treatment Capacity Limits	X		
3.3	D34. Identify Issues and Plan for Water Zone 2 Infrastructure Improvements	X		
3.4	D30. Develop Infrastructure Allocation Policy	X		
3.5	D35. Identify Areas with Underutilized Infrastructure Capacity	X		
3.6	D33. Encourage To and Thru Infrastructure Policies		X	

Strategy 4. Special Area Planning

Summary: This strategy includes planning for defined geographic areas or special districts to adjust existing land use plans and evaluate opportunities to include housing or mixed-use development and determine whether and how that could occur.

Strategy 4 relates to Strategy 2 (Housing Development in Existing UGB). This strategy recognizes studies that are currently underway and that are in the Planning Department's future work plan that assess the potential for housing in McMinnville's core and on Three Mile Lane.

Because two of these projects are already underway, this planning phase is high ease / high impact. Work on two of the special area plans will be completed in the short-term and may see both immediate as well as long term results.

Potential Actions or Projects:

4.1 **City Center Housing Strategy (underway, B23).** The strategy will evaluate a defined area within the City Center for opportunities to increase context-sensitive housing within that area. This work has the potential to implement other strategies. The study area is partially within the designated Urban Renewal District area where eligible for TIF (K62), and could include strategies such as such as infill (A13), redevelopment, rezoning for residential use (A1), up-zoning (A3), identification of possible opportunity sites (H48), and determination of associated infrastructure needs (D28).

4.2 **Evaluate Three Mile Lane for Residential Development (underway, B24).** The Three Mile Lane Area Plan includes evaluation of land use alternatives that could include opportunities to increase housing within the defined study area. This work has the potential to implement other strategies, which could include rezoning to residential or mixed-use (A1), up-zoning (A3), and determination of associated infrastructure needs (D28, D30).

4.3 **Undertake a Highway 99W Corridor Study – Explore Opportunities for Higher Density Mixed-Use Development (B25).** This work could include opportunities for higher density mixed-use development in anticipation of changing commercial patterns.

Exhibit 9. Summary of Potential Actions or Projects

4.2	B24. Evaluate Three Mile Lane for Residential Development (underway).	X		
4.3	B25. Undertake a Highway 99W Corridor Study – Explore Opportunities for Higher Density Mixed-Use Development		X	

Strategy 5. Land Use / Code Amendments

Summary: This strategy includes different policy options that could be incorporated into the land use policies and development standards to help meet housing needs consistent with McMinnville's Great Neighborhood Principles. Many of these could be undertaken independently of one another but might be reviewed more efficiently if evaluated together at the same time through a single review process.

These code amendments generally do not need to be undertaken in a specific sequence. They may individually vary in ease and impact. Some may be required for statutory compliance.

Potential Actions or Projects:

5.1 **Allow Duplexes, Cottages, Townhomes, Row Houses, and Tri- and Quad-Plexes in Single-Family Zones with Appropriate Design & Development Standards (A9).** Allowing these housing types can increase overall density of residential development and may encourage a higher percentage of multifamily housing types. This approach would be implemented through the zoning ordinance and would list these housing types as outright allowable uses in appropriate residential zones. These housing types provide additional affordable housing options and allow more residential units than would be achieved by detached homes alone.

5.2 **Implement Other Code Amendments Prioritized by the PAC.** These include the following:

- Allow More Housing Types (A9)
- Develop a High-Density Residential Zone (A3)
- Permit ADUs in SF Zones (A11)
- Allow Small Residential Lots (A4)
- Mandate Minimum Residential Densities (A6)
- Increase Allowable Residential Densities (A7)
- Promote Infill Development, Allowing Flexibility in Existing Zones with Appropriate Design and Development Standards (Underway) (A13)
- Allow Small or "Tiny" Homes and Identify Opportunities for Tiny Home Developments. (A12)
- Allow Clustered Residential Development (A8)
- Allow Cohousing and "Group Quarters" (SROs, etc.) (A10)
- Evaluate Transfer of Density for Protection of Natural Features (A 18)

5.3 **Streamline Zoning Code and Other Ordinances (G44)**. Complexity of zoning, subdivision, and other ordinances can make development more difficult, time consuming, and costly. Streamlining development regulations can result in increased development. As part of the streamlining process, McMinnville should evaluate potential barriers to affordable workforce housing and multifamily housing. Potential barriers may include height limitations, complexity of planned unit development regulations, etc.

5.4 **Implement the Great Neighborhood Principles (C26).** In April 2019, the City adopted Great Neighborhood Principles (GNP) and associated policies as part of the Comprehensive Plan. Some of these policies address mixed income and mixed housing neighborhoods. These policies will need to be implemented with code amendments, which can include other strategies, such as Strategy A2 to achieve a Diverse Housing Zone.

5.5 **Repeal Outdated Policies Related to Old Sewer Treatment Capacity Limits (C27).** Previously, the City's sewer treatment plant (water reclamation facility) had limitations on treatment capacity, and the City established policies that limited density in certain areas commensurate with the treatment capacity limitations. The treatment capacity of the plant has increased, and those limitations are no longer necessary, and should be repealed.

5.6 **Evaluate Code for Fair Housing Act Best Practices (A22).** Historically, many communities have regulated residential use through definitions of "dwelling," "family," and "household" that described the maximum number of related and/or unrelated people living as a household within a dwelling unit. These regulations typically predated the Fair Housing Act, and new best practices which further the Fair Housing Act take a different approach to defining these terms and regulating residential use. Resulting regulations are more inclusive in permitting residential use.

5.7 **Advocate for Inclusionary Zoning Enablement – State Legislation and Annexation Processes (A14).** Inclusionary zoning policies tie development approval to, or provide regulatory incentives for, the provision of low- and moderate-income housing as part of a proposed development. Mandatory inclusionary zoning requires developers to provide a certain percentage of low-income housing. Incentive-based inclusionary zoning-provides density or other types of incentives. Price of low-income housing passed on to purchasers of market-rate housing; inclusionary zoning impedes the "filtering" process where residents purchase new housing, freeing existing housing for lower-income residents. Some cities have long had quasi-inclusionary housing provisions in their codes that are implemented at the point of annexation. SB 1533 2016 and HB 2997 2019 related to this issue but failed to provide inclusionary zoning reform that meets McMinnville's needs.

Exhibit 10. Summary of Potential Actions or Projects

Reference	Tasks or Projects	Time Period

Other, Non-Land Use Strategies

Strategy 6. Programs for Affordable Housing (Non-Land Use)

Summary: This strategy includes different policy options that could be evaluated independently of one another. These are not land use actions, and don't go through the land use process. These don't become part of the Comprehensive Plan and land use regulations.

This strategy includes a prioritized list of actions to be evaluated by the Affordable Housing Task Force and/or other City committee. These are listed in priority identified by the PAC. This list can generally be undertaken for individual evaluation rather than as part of a larger sequenced project.

These actions range from low to high ease and low to high impact and are listed per priority for discussion and evaluation.

<u>**Potential Actions or Projects:**</u>

6.1 **Pursue Funds for Affordable Housing (City Influence).** This strategy recognizes that there are funding mechanisms that the City can institute that could be used for affordable housing.

- **Transient Lodging Tax Funds for Affordable Housing (K68)**. The City receives 30% of the transient lodging taxes collected to offset impacts of tourism on city services. Some cities have dedicated some or all of these funds towards affordable housing under the premise that short term rentals are displacing affordable housing supply and that the tourism industry creates more demand for affordable housing.
- **Urban Renewal Funds or Tax Increment Financing (K63).** The City can direct urban renewal funds to incentivize workforce housing in the city center.
- **Construction Excise Tax (K64).** Recent state legislation allows cities to collect a construction excise tax dedicated specifically for affordable housing.
- **Community Development Block Grant Funds (K69).** The City can apply to the State of Oregon for Community Development Block Grant Funds as part of the state's entitlement program. And the City can pursue a Principal City CDBG Entitlement status.

6.2 **Financial Incentives Supporting Inclusionary Zoning (I52).** In addition to regulatory mandates and incentives for inclusionary zoning, there can be financial incentives to help achieve inclusionary zoning, or to help increase the level of affordability or percentage of affordable units. If a City adopts both inclusionary zoning and a Construction Excise Tax, a city must offer certain incentives for developments subject to inclusionary zoning.

6.3 **Reduced or Waived Planning Fees, Permit Fees, SDCs for Affordable Housing (I55).** Planning fees, permit fees, and SDCs can be reduced or waived for qualifying affordable housing developments. McMinnville has already enacted planning, permit, and certain SDC waivers for qualifying affordable housing developments.

6.4 **Vertical Housing Tax Abatement (Locally Enabled and Managed) (I51).** Subsidizes "mixed-use" projects to encourage dense development or redevelopment by providing a partial property tax exemption on increased property value for qualified developments. The exemption varies in accordance with the number of residential floors on a mixed-use project with a maximum property tax exemption of 80% over 10 years. An additional property tax exemption on the land may be given if some or all of the residential housing is for low-income persons (80% of area is median income or below). The proposed zone must meet at least one of the following criteria: Completely within the core area of an urban center; Entirely within half-mile radius of existing/planned light rail station; Entirely within one-quarter mile of fixed-route transit service (including a bus line); Contains property for which land-use comprehensive plan and implementing ordinances effectively allow "mixed-use" with residential.

6.5 **SDC Financing and Credits (I53).** Enables developers to spread their SDC payment over time, thereby reducing upfront costs. Alternately, credits allow developers to make necessary improvements to the site in lieu of paying SDCs. Note that the City can control its own SDCS, but often small cities manage them on behalf of other jurisdictions including the County and special districts. Funding can come from an SDC fund or general fund. In some cases, there may be no financial impact. Can come in the form of student, low-income, or workforce housing.

6.6 **Parcel assembly (H45).** Parcel assembly involves the city's ability to purchase lands for the purpose of land aggregation or site assembly. It can directly address the issues related to limited multifamily lands being available in appropriate locations (e.g., near arterials and commercial services). Typical goals of parcel assembly programs are: (1) to provide sites for rental apartments in appropriate locations close to services and (2) to reduce the cost of developing multifamily rental units. Parcel assembly can lower the cost of multifamily development because the City is able to purchase land in strategic locations over time. Parcel assembly is more often associated with development of government-subsidized affordable housing, where the City partners with nonprofit affordable housing developers.

6.7 **Multiple-Unit Limited Tax Exemption Program (Locally Enabled and Managed (I49**). Multi-unit projects receive a ten-year property tax exemption on structural improvements to the property as long as program requirements are met. There is no ground floor active use requirement for this tool. The City of Portland's program, for example, limits the number of exemptions approved annually, requires developers to apply through a competitive process, and encourages projects to provide greater public benefits to the community. This program is enabled by the state, but managed by the local jurisdiction.

6.8 **Sole Source SDCs (I54).** Retains SDCs paid by developers within a limited geographic area that directly benefits from new development, rather than being available for use city-wide. This enables SDC eligible improvements within the area that generates those funds to keep them for these improvements. Improvements within smaller areas can enhance the catalytic and redevelopment value of the area. This tool can also be blended with other resources such as LIDs and TIF. Funding can come from an SDC fund or general fund. In some cases, there may be no financial impact. The housing can come in the form of student, low income, or workforce housing.

6.9 **Grants or Loans (I56).** Through the annual budget process, the City can allocate funds to assist affordable housing developments as part of an Affordable Housing Fund. Assistance can also be provided through no- or low-interest loans. That typically occurs in conjunction with a revolving loan fund that allows the fund to grow over time as loans are repaid.

6.10 **Vacant Property Tax**. This strategy would assess additional taxes on vacant residential properties. The intent is to disincentivize land holding and speculation and to encourage housing development.

6.11 **Fee for Demolition of Affordable Home for Expensive Home**. This action would assess additional fees for certain demolitions. It would be modeled after a policy in Lake Oswego. The intent is to preserve affordable housing stock.

Strategy 7. Leveraging Partnerships for Housing (Non-Land Use)

Summary: This strategy includes different policy options that could be evaluated independently of one another. These may require a partner organization to take on a new or expanded role or may require formation or identification of a new organizational partner.

Several of the high priority actions identified by the PAC require partnerships with external organizations.

Potential Actions or Projects:

7.1 **Support Partners Pursuit of Affordable Housing Funds for:**

- **Low Income Housing Tax Credit (P78)**. The Low-Income Housing Tax Credit Program (LIHTC) is an incentive to encourage the construction and rehabilitation of rental housing for lower-income households. The program offers credits on federal tax liabilities for 10 years. Individuals, corporations, partnerships and other legal entities may benefit from tax credits, subject to applicable restrictions. Annually, the U.S. Department of Treasury allocates tax credits to each state. Oregon Housing and Community Services (OHCS) administers' the tax credit program for the state of Oregon. Tax credits offer direct federal income tax savings to owners of rental housing developments who with a developer are willing to set-aside a minimum portion of the development's units for households earning 60 percent or less of gross area median income. Developers of tax credit developments typically sell the credits to investors who are willing to provide capital in return for the economic benefits (including tax credits) generated by the development.
- **Homeownership Programs (I57).** Cities (and other partners) use a variety of programs to assist with homeownership
  - **Homebuyer Assistance Programs.** These Down Payment Assistance loans help low- or moderate-income households cover down payment and closing costs to purchase homes on the open market. These programs either give loans or grants, most frequently to first time homebuyers.
  - **Inclusionary Housing Program.** Some cities have an Inclusionary Housing Ordinance (IH) requires that new residential development contribute at least 20% of the total units as permanently affordable housing. Options for meeting this requirement can be allow the affordable units to be located on or off site. Cities that use inclusionary housing generally have programs to ensure that housing continues to be affordable over the long-term.
  - **Partnerships.** Cities often work with partnerships with nonprofit agencies that provide homeownership assistance.
- **Oregon Affordable Housing Tax Credit (P77).** The 1989 Oregon Legislature created the Oregon Affordable Housing Tax Credit Program (OAHTC). Under the OAHTC Program, the Department has the authority to certify tax credits for projects. Through the use of tax credits, lending institutions are able to lower the

cost of financing by as much as four percent for housing projects or community rehabilitation programs serving low-income households. The savings generated by the reduced interest rate must be passed directly to the tenant in the form of reduced rents.

- **Housing Rehabilitation Programs (I59)** Cities (and other partners) often offer home rehabilitation programs, which provide loans to low- and moderate-income households for rehabilitation projects such as making energy efficiency, code, and safety repairs. Some programs provide funding to demolish and completely reconstruct substandard housing.
- **State Affordable Housing Funding (M73).** 2019 proposed legislation, HB 3349 that would change the tax income code to eliminate certain deductions, and the resulting revenues would fund state affordable housing programs.

7.2 **Community Land Trust (CLT) (H47).** A Community Land Trust (CLT) creates permanent affordability by severing the value of the land and the improvements (i.e., the house). The land is held in trust by a nonprofit or other entity then leased to the homeowner. The homeowner enjoys most of the rights of homeownership, but restrictions are placed on use (e.g., owner occupancy requirement), and price restrictions on resale ensure that the home remains affordable. CLTs may be used in conjunction with land banking programs, where the city or a nonprofit housing corporation purchases a future site for affordable housing or other housing that meets community goals. A variation to the community land trust is to have the City own the property rather than the land trust, and lease property to income-qualifying households (such as low-income or moderate-income households) to build housing. The City would continue to own the land over the long-term, but the homeowner would be able to sell the house. Restrictions on resale ensure that the home remains affordable.

7.3 **Affordable Housing Property Tax Abatement (I50).** There are several statutory authorizations for different types of affordable housing property tax abatements which could apply to affordable housing developments that aren't already tax exempt. Some of these can be designated for a limited duration.

7.4 **Land Banking (H46).** Land banks are public or community-owned entities created to acquire, manage, maintain, and repurpose vacant, abandoned, and foreclosed properties for conversion into productive use. Land banks can play a variety of roles. They can play a very limited role, such as simply acquiring property on behalf of a local municipality, or a broader role of property developer. It is important to note that land banks are not financial institutions: financing comes from developers, banks, and local governments. Land banks may be granted special powers via state enabling legislation. These powers can include the ability to remove legal and financial barriers, such as delinquent property taxes, that often render vacant and abandoned properties inaccessible or unattractive to the private market. Land banks acquire properties through different means, but the most common pipeline is the property tax foreclosure system.

Exhibit 12. Summary of Potential Actions or Projects

Reference	Tasks or Projects	Time Period		
		Near-term	Mid-term	Long-term
7.1	Support Partners Pursuit of Affordable Housing Funds for: • P78. Low Income Housing Tax Credit • I57. Home Ownership Programs • P77. Oregon Affordable Housing Tax Credit • I59. Housing Rehabilitation Programs • M73. State Affordable Housing Funding	X	X	X

3. Appendices

The McMinnville Housing Strategy builds upon various materials provided to the Project Advisory Committee (PAC) throughout the project. Materials from the May 21st PAC meeting are attached as appendices:

- **Appendix A.** Table 1. Issues Associated with Strategic Priorities. This table identifies issues from the BLI and HNA and also evaluates current conditions; existing plans, policies, and regulations; and new state law that might be addressed as part of the housing strategy.
- **Appendix B.** Table 2. McMinnville Housing Strategy – Potential Strategies and Actions. This table lists each strategy and cross references it with strategic priorities, affordability groups, and other factors.
- **Appendix C.** Table 3. Description of Potential Actions. This table provides more detailed descriptions of the potential housing strategies and actions listed in Table 2. In addition, the table provides further information about the potential scale of impact of the strategy.
- **Appendix D.** Prioritization Results from May 21, 2019 PAC Meeting**.**

Links to full size copies of these materials and additional supporting materials are provided below. Due to the length and format of documents, these materials are incorporated by reference through links to files on the City website.

Issues Associated with Strategic Priorities
(Barriers, Opportunities, New Requirements, Additional Considerations)

This table identifies issues from the BLI and HNA and also evaluates current conditions; existing plans, policies, and regulations; and new state law that might be addressed as part of the housing strategy.

Table 1. Issues Associated with Strategic Priorities

1. Land Supply, Capacity, & Availability	2. Wider Variety of Housing Types	3. Affordability	4. Infrastructure	5. Great Neighborhood Principles & Urban Form
Land Use Issues & Considerations				
Barriers:				
Lack of available, buildable land in the UGB to meet short-term needs. **Some “Buildable Lands” in the UGB aren’t truly “available” for development, despite presumptions stated in state statutes or administrative rules.** Land may be unavailable due to unwilling property owners, including the unincorporated UGB, etc. **There are additional plan updates required and lag time after land is added to the UGB before it can be rezoned and ready for urban development.** **There is uncertainty in the Buildable Land Inventory regarding additional “Goal 5” natural resource impacts.** The City will need to conduct planning for a local wetland inventory and riparian corridors to determine impacts on buildable land supply. **There is uncertainty in the Buildable Land Inventory regarding additional “Goal 7” hazards impacts.** The state will be refining landslide hazards mapping; in addition, there is no statute or administrative rule interpreting the state’s landslide hazard susceptibility classifications. **See additional barriers under “Infrastructure”** related to serviceability of buildable lands in the UGB and unknowns about current downstream capacity that could affect service of expansion areas.	**No “middle housing” zone.** There isn’t a zoning district between the R-3 and R-4 zones in the Zoning Ordinance, which could cover a density range of 11-20 units/acre typical of 2-story “middle housing” types. This means zoning options are lower density or higher density. -The R-3 zone allows for density in the range of approximately 7 to 11 du/acre; it doesn’t allow for attached housing or multi-family housing over 2 units. -The R-4 zone allows for density in the range of approximately 9 to 30 du/acre; it is the only residential zone that allows for attached housing and multi-family housing with 3 or more units. -This can exacerbate infrastructure planning for somewhat higher densities, since a rezone from R-3 to R-4 would allow a significant increase from 11 to 30 units per acre, rather than a more modest increase from 11 to 20 units per acre. **No existing residential zone allows density greater than 30 du/acre (R-4)**, except when higher density is authorized as a conditional use in the defined core area. The R-4 standards also apply in commercial zones that allow residential uses. **The highest density residential zone (R-4) also allows single-family development as a stand-alone permitted use with a minimum lot size**	**Current Inclusionary Zoning (IZ) Enabling Legislation Limits Cities.** Current state law provisions governing local “inclusionary zoning” have largely been inapplicable in McMinnville since it is currently authorized only for multi-family structures with 20 or more units, which isn’t the type of multi-family housing typically built in McMinnville. Further, inclusionary zoning isn’t current authorized for single-family housing. In addition, the definition of affordability in the IZ legislation doesn’t authorize cities to establish affordability requirements below 80% median income.	**Until infrastructure planning is completed, it is unknown whether “downstream” infrastructure in the UGB will be able to serve future expansion areas without first being upsized to allow for extensions.** **Buildable lands within the UGB in Water Service Zone 2 are unserviceable in the short-term until a Zone 2 reservoir is built (estimated 10 years).** **Sewer Capacity Constraints.** The sewer (wastewater) collection plan was based on development of vacant lands at historic development densities by zone, rather than maximum density permitted by existing zoning. In addition, this planning didn’t assume developed properties would experience infill and redevelopment at higher density permitted by existing zoning. This presents constraints: **- Constraints to Code Amendments.** This may limit code amendments that would authorize additional, “middle housing” types within existing zoning districts. **- Constraints to Permitted Development and Densities.** This doesn’t always allow development of vacant lands consistent with maximum density permitted by existing zoning. **- Constraints to Infill & Redevelopment.** This doesn’t always allow infill and redevelopment of developed properties consistent with higher or maximum density permitted by existing zoning.	**Current Euclidean Zoning System Limits Mix of Housing and Density.** However, most development occurs through the Planned Development process which achieves housing mix to some extent (up to 25% of area) based on density averaging of the underlying zone. However, this requires reducing density of other housing to achieve the same average, or requires rezoning. **Form-Based Codes.** Some “form-based codes” can allow development that is compatible within a neighborhood by regulating the size and physical characteristics of a building, while providing flexibility regarding the density within the building envelope. The same exterior building form/envelope can contain fewer large units or a greater number of smaller units. Some density-based codes can prevent this flexibility. This should be considered when implementing Great Neighborhood Principles, Diverse Housing Types zoning and public facilities planning. It is unclear how this could be implemented in a way that satisfies statutory requirements which require a density-based zoning.

1. Land Supply, Capacity, & Availability	2. Wider Variety of Housing Types	3. Affordability	4. Infrastructure	5. Great Neighborhood Principles & Urban Form
	of 5,000 square feet. This could be a barrier to achieving other needed housing. **Finer-Grained Zoning.** There is a need for a finer gradation of residential uses based on "scale". Anything over a duplex or semi-detached housing (two attached units) is only permitted in the R-4 zone. Further, for 3 or more units, there is no differentiation of multi-family housing development that has the same number of units, whether all in one building or in multiple smaller buildings. More smaller-scale structures can be permitted and compatible within different neighborhood contexts. Some uses may already be permitted, but not in all zones, so there may be a need to increase opportunities for where certain uses are permitted. Finer gradation will help this. **Fair Housing Act.** Code provisions should be reviewed in the context of Fair Housing Act best practices to ensure residential living models aren't inadvertently prohibited by the zoning ordinance due to outdated definitions and regulations. **Other Co-Living Land Uses.** Places where people live are classified by the Census Bureau as either residential use or group quarters. Some codes inadvertently prohibit some residential living situations and housing types that don't technically meet the definition of residential use, but would typically fall under the Census Bureau's classification of group quarters. Some of this may be addressed through code provisions consistent with Fair Housing Act best practices.		- **Constraints to Upzoning.** This doesn't always permit upzoning of vacant lands already in the UGB. **Short-Term Housing Strategies May be Impacted by Capacity Constraints.** More efficient use of land within the current UGB would be a strategy to help meet short-term needs until additional land is available through a UGB amendment, associated public facility plan updates, and extension/ availability of services to those lands. ***However, this strategy may be impacted by infrastructure capacity issues.*** **Transportation Plan Modeling.** Transportation Planning assumed no further development in certain developed areas, posing similar potential issues as described above for sewer, possibly affecting infill & redevelopment, upzoning, etc. **Existing Policies Restricting Density.** Due to previous sewer treatment capacity limitations which are no longer applicable, the City adopted density restrictions for part of the UGB which are no longer needed and should be formally repealed.	
Opportunities:				
		SB 2997 Enabling Legislation for Broader Use of Inclusionary Zoning. If enacted, SB 2997 will allow McMinnville greater discretion in use of "inclusionary zoning" to specify a % of housing in new developments as part of land use approval.		

1. Land Supply, Capacity, & Availability	2. Wider Variety of Housing Types	3. Affordability	4. Infrastructure	5. Great Neighborhood Principles & Urban Form
New Requirements:				
	HB 2001 "Middle Housing" Mandates. If enacted, HB 2001 will mandate that cities to plan for and permit small "middle housing" multi-family types in more zones. **HB 2001 ADU Mandates.** If enacted, HB 2001 will require change to McMinnville's current ADU implementation (to eliminate off-street parking requirements for ADUs).			**HB 2001.** If HB2001 is enacted, implementation of GNP will need to be consistent with HB 2001 mandates.
Additional Considerations:				
	Transition from Current Zoning Structure. The transition from the current zoning structure to regulations that implement Great Neighborhood Principles will mean some traditional land use tools more applicable to Euclidean zoning with more separated housing types and densities won't be applicable. There may be some more traditional tools that would be used in the interim as implementation of the Great Neighborhood Principles is phased in (map amendments that upzone property, code amendments that authorize more efficient use in existing zones, etc.). **Inclusivity of Diverse Housing Types.** In addition to providing opportunities for a wider variety of housing types, it will be key that this is closely coordinated with the implementation of Great Neighborhood Principles to address inclusion of these diverse housing types within neighborhoods, together with appropriate requirements for mix and average density, design standards, and other considerations. **Context-Based Design Standards.** Some design standards are based on use and don't account for different locational contexts, such as different urban vs. suburban forms and design standards for multi-family development depending on location and context.		It would be useful to map current capacity, currently planned capacity, and capacity that would result from public facility plan updates. If there are areas unlikely to experience new development, it may be possible to transfer allowed density to other areas where sewer capacity could be utilized for new development or infill.	**Great Neighborhood Principles Adopted.** The City has adopted Great Neighborhood principles which will need to be implemented. **Great Neighborhood Principles – Implementation.** The City will be implementing the recently adopted Great Neighborhood Principles, which will be a transformative step in how the City regulates residential land use in a manner than provides for neighborhoods with a mix of housing types and housing for different incomes. Phase-in of Great Neighborhood Principles will need a strategy. Some existing developed areas may have different requirements as the implementation is phased in. **Special Area Planning Projects Underway.** Several district planning efforts are underway that may identify nodal areas suitable for higher-density housing than would be achieved within the context of smaller neighborhood settings. Larger development sites should be subject to framework planning that sets performance requirements for future neighborhood developments. *(Some housing related aspects of planning for urban form will be incorporated into a broader urbanization strategy which will include planning for all uses).*

1. Land Supply, Capacity, & Availability	2. Wider Variety of Housing Types	3. Affordability	4. Infrastructure	5. Great Neighborhood Principles & Urban Form
Other Issues and Considerations Related to Delivery of Housing (Non Land Use)				
Barriers				
		Lack of Housing Supply Prevents Partner Resources from Being Fully Utilized. Many Section 8 Housing Choice Vouchers available through the Housing Authority can't be used to help subsidize housing costs due to lack of housing or housing within the price point that would allow vouchers to be used. Reducing the cost of market-rate housing could also present an opportunity to more fully utilize these vouchers to provide a subsidy for more affordable market-rate housing. Lack of available sites could preclude partners such as the Housing Authority from developing affordable housing using Low Income Housing Tax Credits, which means lost opportunity for use of outside funds which would be highly competitive if sites were available. **Administrative Cost Could Impact Ability to Manage a Housing Program that Requires Monitoring of Deed Restricted Affordable Housing.** Deed-restricted affordable housing can help ensure affordable housing supply is maintained, but can require a housing program and staff to administer a program over the long term. *(There could be exploration of potential partnership opportunities to administer a program).*		
Opportunities				
		(Time Sensitive). Opportunity Zone. McMinnville has a significant area within a designated Opportunity Zone which can be an incentive to affordable housing. **New Opportunity: SB595 Enabling Legislation for Affordable Housing Funds.** If enacted, SB 595 will allow cities to decide whether to dedicate a portion of local transient lodging tax to affordable housing.		

1. Land Supply, Capacity, & Availability	2. Wider Variety of Housing Types	3. Affordability	4. Infrastructure	5. Great Neighborhood Principles & Urban Form
New Requirements				
Additional Considerations				
	Education & Awareness. It is important to keep homebuilders up to date on regulatory changes and opportunities for new housing types authorized by code amendments. In addition, some uses may already be permitted in some zones by a less familiar name. It is also important to evaluate what is a permitted use vs. what is actually built. The community may assume certain uses aren't permitted because they haven't been built, when that might not be the reason. There may be reasons why trending ideas aren't being built in the housing market that need to be further explored. (financial, regulatory, etc.) **Transitional Housing.** There is a need for both permanent housing and transitional housing.	There is a need to increase more affordable owner-occupied housing opportunities as well as rental opportunities. Further, such housing equity can help households maintain housing options as housing prices escalate. (Supported by land use tools to authorize a wider variety of housing types in more areas).		

TABLE 2. MCMINNVILLE HOUSING STRATEGY – POTENTIAL STRATEGIES AND ACTIONS - DRAFT MATRIX

Strategic Option		Housing Benefits						Strategic Timeframe			Strategic Priority					Housing Need Met					Status		Priority

*Some state and federal programs apply directly between the state and a housing developer or lender, without City involvement; however, the state may look for local support and/or matches when making competitive award decisions, such as with Low Income Housing Tax Credits.

**Authorized by the City, but not frequently used

Note 1: *While the City has a traditional Euclidean zoning program, a Planned Development (PD) process is almost exclusively employed for most new subdivision developments, which provides flexibility and has achieved a mix of housing types and densities not otherwise permitted in the underlying zoning. In addition, implementation of Great Neighborhood Principles (GNP) and transition into the new program may mean some strategies applicable to current zoning will no longer apply when GNPs are implemented.*

Note 2: *Market rate housing benefits may apply across the board, or may be targeted to market rate at the more affordable end of the spectrum that can be achieved at market rates without subsidies – typically in the "workforce housing" range of 80-120% of median income.*

Table 3. This table provides more detailed descriptions of the potential housing strategies and actions listed in Table 3. In addition, the table provides further information about the potential scale of impact of the strategy.

Strategy Name	Description	Scale of Impact
I. LAND USE STRATEGIES (City)		
A. Regulatory Changes. Changes to the Zoning Code and Other Ordinances to Advance Strategic Priorities (through increasing residential land and capacity, flexibility, efficiencies, regulatory incentives, regulatory mandates, etc.)		
A1. Redesignate or rezone land for housing	The types of land rezoned for housing are vacant or partially vacant low-density residential and employment land rezoned to multifamily or mixed use. In rezoning land, it is important to choose land in a compatible location, such as land that can be a buffer between an established neighborhood and other denser uses or land adjacent to existing commercial uses. When rezoning employment land, it is best to select land with limited employment capacity (e.g., smaller parcels) in areas where multifamily housing would be compatible (e.g., along transit corridors or in employment centers that would benefit from new housing). This policy change increases opportunity for comparatively affordable multifamily housing and provides opportunities for mixing residential and other compatible uses.	**Scale of Impact - Low to high:** Scale of impact depends on the amount and location of land rezoned and the densities allowed on the rezoned land.
A2. Diverse Housing Zone. Explore residential zoning with targeted/ minimum density and multiple allowed housing types	This zone would authorize a variety of housing types and sub-types including single-family detached and "middle housing" attached and multi-family housing types. In contrast to traditional zoning, this strategy would be used to implement Great Neighborhood Principles (GNP), including the framework and area planning for growth areas, to specify a housing mix and associated average density that would need to be achieved in an area.	**Scale of impact – Medium to high:** This strategy allows a broader range of housing types; the impact will depend on market response.
A3. Develop a high density residential zone	This strategy would be used in conjunction with and to complement the Great Neighborhood Principles and diverse housing zone (A2) to provide for higher density housing types in specific areas, such as more dense core areas, centers, nodes, etc.	**Scale of Impact – Medium to high**: The key impacts of this strategy will be (1) ensuring land is available for higher density housing types, and (2) achieving

Strategy Name	Description	Scale of Impact
(cont.)	which would be higher density than the densities for "middle housing" types which would be incorporated on smaller lots within the diverse housing zone.	greater land use efficiencies that the city currently achieves in the R-4 zone.
A4. Allow Small Residential Lots	Small residential lots are generally less than 5,000 sq. ft. This policy allows individual small lots within a subdivision or short plat. Small lots can be allowed outright in the minimum lot size and dimensions of a zone, or they could be implemented through the subdivision or planned unit development ordinances. This policy is intended to increase density and lower housing costs. Small lots limit sprawl, contribute to the more efficient use of land, and promote densities that can support transit. Small lots also provide expanded housing ownership opportunities to broader income ranges and provide additional variety to available housing types.	**Scale of Impact – Low to medium**. Cities have adopted minimum lot sizes as small as 3,000 sq. ft. However, it is uncommon to see entire subdivisions of lots this small. Small lots typically get mixed in with other lot sizes.
A5. Mandate Maximum Lot Sizes	This policy places an upper bound on lot size and a lower bound on density in single family zones. For example, a residential zone with a 6,000 sq. ft. minimum lot size might have an 8,000 sq. ft. maximum lot size yielding an effective net density range between 5.4 and 7.3 dwelling units per net acre. This approach ensures minimum densities in residential zones by limiting lot size. It places bounds on building at less than maximum allowable density. Maximum lot sizes can promote appropriate urban densities, efficiently use limited land resources, and reduce sprawl development.	**Scale of Impact – Low to medium**. Mandating maximum lot size may be most appropriate in areas where the market is building at substantially lower densities than are allowed or in cities that do not have minimum densities.
A6. Mandate Minimum Residential Densities	This policy is typically applied in single-family residential zones and places a lower bound on density. Minimum residential densities in single-family zones are typically implemented through maximum lot sizes. In multiple-family zones they are usually expressed as a minimum number of dwelling units per net acre. Such standards are typically implemented through zoning code provisions in applicable residential zones. This policy increases land-holding capacity. Minimum densities promote developments consistent with local comprehensive plans and growth assumptions. They reduce sprawl development, eliminate underbuilding in residential areas, and make provision of services more cost effective.	**Scale of Impact - Low to medium**. Increasing minimum densities and ensuring clear urban conversion plans may have a small to moderate impact depending on the observed amount of underbuild and the minimum density standard.

Strategy Name	Description	Scale of Impact
A7. Increase Allowable Residential Densities	This approach seeks to increase holding capacity by increasing allowable density in residential zones. It gives developers the option of building to higher densities. This approach would be implemented through the local zoning or development code. This strategy is most commonly applied to multifamily residential zones. Higher densities increase residential landholding capacity. Higher densities, where appropriate, provide more housing, a greater variety of housing options, and a more efficient use of scarce land resources. Higher densities also reduce sprawl development and make the provision of services more cost effective.	**Scale of Impact – Low to medium**. This tool can be most effective in increasing densities where very low density is currently allowed or in areas where a city wants to encourage higher density development.
A8. Allow Clustered Residential Development	Clustering allows developers to increase density on portions of a site, while preserving other areas of the site. Clustering is a tool most commonly used to preserve natural areas or avoid natural hazards during development. It uses characteristics of the site as a primary consideration in determining building footprints, access, etc. Clustering is typically processed during the site review phase of development review.	**Scale of Impact – Medium.** Clustering can increase density, however, if other areas of the site that could otherwise be developed are not developed, the scale of impact can be reduced.
A9. Allow Duplexes, Cottages Townhomes, Row Houses, and Tri- and Quad-Plexes in single-family zones with appropriate design & development standards	Allowing these housing types can increase overall density of residential development and may encourage a higher percentage of multifamily housing types. This approach would be implemented through the local zoning or development code and would list these housing types as outright allowable uses in appropriate residential zones. These housing types provide additional affordable housing options and allow more residential units than would be achieved by detached homes alone.	**Scale of Impact – Low to Medium**. Allowing these types of housing in more zoning districts may provide a relatively small number of new, relatively affordable, housing opportunities.
A10. Allow Cohousing and "Group Quarters" (SROs, etc.)	Co-housing is a type of intentional community that provides individual dwelling units, both attached and detached, along with shared community facilities. Members of a co-housing community agree to participate in group activities and members are typically involved in the planning and design of the co-housing project. Private homes contain all the features of conventional homes, but residents also have access to extensive common facilities, such as open space, courtyards, a playground, and a common house.	**Scale of Impact – Low to Medium**. While cohousing may be able to achieve multifamily housing densities, it is unlikely that this housing type would make up a large portion of new housing stock, thereby diminishing its impact.

Strategy Name	Description	Scale of Impact
(cont.)	This approach would be implemented through the local zoning or development code and would list these housing types as outright allowable uses in appropriate residential zones. ***NOTE:*** *"Co-housing" is often a permitted use as one of the permitted housing types (single-family, attached housing, or multi-family) that has private social arrangements which are not publicly regulated through the zoning ordinance).* "Group Quarters" is a useful category used by the Census Bureau to describe living situations that aren't classified as dwellings. This includes la variety of different living situations where occupants have some private living spaces, but each private living space doesn't comprise a full dwelling unit, and there are certain shared common areas. For example, they may have one or more of the following: shared kitchen and dining facilities, living rooms, and/or bathrooms, etc. Examples include SROs (Single Room Occupancy housing, etc.). Similar to differentiation of "middle housing" multi-family housing types, these could be regulated and differentiated by zoning based on size categories.	"Group quarters" uses may reduce construction costs and address a potentially unmet need.
A11. Permit Accessory Dwelling Units (ADUs) in single-family zones	Communities use a variety of terms to refer to the concept of accessory dwellings: secondary residences; "granny" flats; and single-family conversions, among others. Regardless of the title, all of these terms refer to an independent dwelling unit that share, at least, a tax lot in a single-family zone. Some accessory dwelling units share parking and entrances. Some may be incorporated into the primary structure; others may be in accessory structures. Accessory dwellings can be distinguished from "shared" housing in that the unit has separate kitchen and bathroom facilities. ADUs are typically regulated as a conditional uses. Some ordinances only allow ADUs where the primary dwelling is owner-occupied. ***NOTE:*** *McMinnville has already adopted and simplified ADU provisions. HB 2001 may require a modification that would eliminate additional off-street parking requirements for ADUs.*	**Scale of Impact - Low**. Oregon law recently changed to require cities to allow ADUs. McMinnville has received few permit applications for ADUs in recent years.

Strategy Name	Description	Scale of Impact
A12. Allow small or "tiny" homes and identify opportunities for tiny home developments.	"Tiny" homes are typically dwellings that are 500 square feet or smaller. Some tiny houses are as small as 100 to 150 square feet. They include stand-alone units or very small multifamily units. Tiny homes can be sited in a variety of ways: locating them in RV parks (they are similar in many respects to Park Model RVs), tiny home subdivisions, or allowing them as accessory dwelling units. Smaller homes allow for smaller lots, increasing land use efficiency. They provide opportunities for affordable housing, especially for homeowners.	**Scale of Impact – Low to medium:** Scale of impact depends on regulation of tiny homes, where they are allowed, and market demand for tiny homes.
A13. Promote Infill Development, Allowing Flexibility in Existing Zones with Appropriate Design and Development Standards	This policy seeks to maximize the use of lands that are fully developed or underdeveloped. Make use of existing infrastructure by identifying and implementing policies that (1) improve market opportunities, and (2) reduce impediments to development in areas suitable for infill or redevelopment. Regulatory approaches to promote infill development include: • Administrative streamlining • Allowing accessory dwelling units (ADUs) • Allowing small lots • Density bonuses	**Scale of Impact – Low to medium**. In general, infill development, especially small-scale infill, is more expensive than other types of residential development. Some types of infill development, such as ADUs, may provide opportunities for relatively affordable housing.
A14. Incentive-Based Zoning and Inclusionary Zoning	Inclusionary zoning policies tie development approval to, or provide regulatory incentives for, the provision of low- and moderate-income housing as part of a proposed development. Mandatory inclusionary zoning-requires developers to provide a certain percentage of low-income housing. Incentive-based inclusionary zoning-provides density or other types of incentives. Price of low-income housing passed on to purchasers of market-rate housing; inclusionary zoning impedes the "filtering" process where residents purchase new housing, freeing existing housing for lower-income residents. Some cities have long had quasi-inclusionary housing provisions in their codes that are implemented at the point of annexation. *Legislative Authorizations: SB 1533 (2016), HB 2997 (2019, pending)*	**Scale of Impact – Low to medium**. Inclusionary zoning has recently been made legal in Oregon. The scale of impact would depend on the inclusionary zoning policies adopted by the city.

Strategy Name	Description	Scale of Impact
A15. Provide Density Bonuses to Developers	The local government allows developers to build housing at densities higher than are usually allowed by the underlying zoning. Density bonuses are commonly used as a tool to encourage greater housing density in desired areas, provided certain requirements are met. This strategy is generally implemented through provisions of the local zoning code and is allowed in appropriate residential zones. Bonus densities can also be used to encourage development of low-income or workforce affordable housing. An affordable housing bonus would allow for more housing units to be built than allowed by zoning if the proposed project provides a certain amount affordable units.	**Scale of Impact - Low**.
A16. Allow Transfer or Purchase of Development Rights (TDR/PDR)	This policy is intended to move development from sensitive areas to more appropriate areas. Development rights are transferred to "receiving zones" and can be traded. This policy can increase overall densities. This policy is usually implemented through a subsection of the zoning code and identifies both sending zones (zones where decreased densities are desirable) and receiving zones (zones where increased densities are allowed).	**Scale of Impact – Low to medium**. Actual impact will depend on the extent to which the policy is used. TDRs may have little impact on overall densities since overall density is not changed; rather it is moved around. TDRs can be used to encourage higher densities in selected areas.
A17. Transfer of Density	Transfer of density can be similar to TDR/PDR (A16), but could potentially be implemented in a more simplified manner that doesn't require the same administrative tracking of sending and receiving zones. For example, a Planned Development may allow a mix of housing types and densities which have the same overall density as allowed in the underlying zone that would achieved through development with uniform minimum lot sizes.	**Scale of Impact – Low to medium**. Actual impact will depend on the extent to which the policy is used. Density transfers may have little impact on overall densities since overall density is not changed; rather it is moved around.
A18. Evaluate transfer of density for protection of natural features	This policy could be implemented in a number of different ways, but with the specific intent of encouraging preservation of natural features by transferring allowed density elsewhere. This could be outside of the development or elsewhere within a development if applicable, similar to A16 or A17. The policy could also be achieved by permitting smaller lot sizes for lots abutting natural features so the natural feature can be better preserved in a distinct tract of land without reducing the development capacity of the site.	**Scale of Impact – Low to medium**. Actual impact will depend on the extent to which the policy is used. Density transfers for natural resource protection may have some impact on overall densities since it is allowing density to be captured on lands that would otherwise be unbuildable.

Strategy Name	Description	Scale of Impact
A19. Reduced Parking Requirements for Different Housing Types	Allows development of housing units to with discretionary reduction of parking requirements if an applicant can demonstrate that no more parking is needed. Reduced parking requirements are generally used in conjunction of development of subsidized affordable housing but cities like Portland have reduced or eliminated parking requirements for market-based multifamily housing in specific circumstances.	**Scale of Impact - Low**. The City could require the developer to prove the need and public benefit or reducing parking requirements to increase housing affordability.
A20. Reduce Street Width Standards	This policy is intended to reduce land used for streets and slow down traffic. Street standards are typically described in development and/or subdivision ordinances. Reduced street width standards are most commonly applied on local streets in residential zones. Narrower streets make more land available to housing and economic-based development. Narrower streets can also reduce long-term street maintenance costs. ***NOTE:*** *McMinnville has already adopted "skinny street" provisions, so any additional revisions would likely be minimal.*	**Scale of Impact - Low**. This policy is most effective in cities that require relatively wide streets.
A21. Regulations to Preserve Existing Housing Supply	Housing preservation ordinances typically condition the demolition or replacement of certain housing types on the replacement of such housing elsewhere, fees in lieu of replacement, or payment for relocation expenses of existing tenants. Preservation of existing housing may focus on preservation of smaller, more affordable housing. Approaches include: • Housing preservation ordinances • Housing replacement ordinances • Single-room-occupancy ordinances • Regulating demolitions	**Scale of Impact - Low**. Preserving small existing housing can make a difference in the availability of affordable housing in a city but it is limited by the existing stock housing, especially smaller, more affordable housing.
A22. Fair Housing Act Best Practices	**Amendments to Definitions and Regulations, Using Best Practices to Further the Fair Housing Act.** Historically, many communities have regulated residential use through definitions of "dwelling," "family," and "household" that described the maximum number of related and/or unrelated people living as a household within a dwelling unit. These regulations typically predated the Fair Housing Act, and new best practices which further the Fair Housing Act take a different approach to defining these terms and regulating residential use. Resulting regulations are more inclusive in permitting residential use.	**Scale of Impact – Low to medium.** This strategy would potentially help low income households obtain affordable housing by allowing more unrelated people to reside in a single dwelling.

Strategy Name	Description	Scale of Impact
B. Special Area Planning which Includes Housing Opportunities		
B23. City Center Housing Strategy	The strategy will evaluate a defined area within the City Center for opportunities to increase context-sensitive housing within that area. This work has the potential to implement other strategies. The study area is partially within the designated Urban Renewal District area where eligible for TIF (K62), and could include strategies such as such as infill (A13), redevelopment, rezoning for residential use (A1), upzoning (A3), identification of possible opportunity sites (H48), and determination of associated infrastructure needs (D28).	**Scale of Impact – Low to medium.** This work is ongoing; it provides an opportunity to identify potential extent of residential component. Impact will also depend on market conditions.
B24. Evaluate Three Mile Land for Residential Development	The Three Mile Lane Area Plan includes evaluation of land use alternatives that could include opportunities to increase housing within the defined study area. This work has the potential to implement other strategies, which could include rezoning to residential use (A1), upzoning (A3), and determination of associated infrastructure needs (D28, D30)	**Scale of Impact – Low to medium.** This work is ongoing; it provides an opportunity to identify potential extent of residential component. Impact will also depend on market conditions.
B25. Hwy 99W Corridor Study – Opportunity for Higher-Density Mixed use Development	This work could include opportunities for higher density mixed-use development in anticipation of changing commercial patterns.	**Scale of Impact – Low to medium.** Impact will depend on market conditions.
C. Ensure Comprehensive Plan Policies Support Strategic Priorities		
C26. Great Neighborhood Principles	In April 2019, the City adopted Great Neighborhood Principles (GNP) and associated policies as part of the Comprehensive Plan. Some of these policies address mixed income and mixed housing neighborhoods. These policies will need to be implemented with code amendments, which can include other strategies, such as Strategy A2 to achieve a Diverse Housing Zone.	**Scale of Impact – Low.** The GNPs are primarily focused on urban form.
C27. Repeal outdated policies related to old sewer treatment capacity limits	Previously, the City's sewer treatment plant (water reclamation facility) had limitations on treatment capacity, and the City established policies that limited density in certain areas commensurate with the treatment capacity limitations. The treatment capacity of the plant has increased, and those limitations are no longer necessary, and should be repealed. (Comprehensive Plan Housing Policies – 71.10)	**Scale of Impact – Low to medium.**

Strategy Name	Description	Scale of Impact
D. Develop Infrastructure Plans to Support Strategic Priorities		
D28. Update infrastructure plans for vacant/infill development	In some developed areas, infrastructure plans including waste water collection and transportation may have assumed no additional development and were not planned for infill and redevelopment to higher intensity. Further, in undeveloped areas, these plans may have assumed growth would occur at historic densities, which may be less than the maximum density permitted by zoning, limiting density of new development where there may be a desire to encourage infill and redevelopment.	**Scale of Impact – Low to medium.** It is difficult to determine impact until the assessment is completed; impact will depend on market response.
D29. Update infrastructure plans for growth lands	Infrastructure plans are generally sized with capacity for build-out of the Urban Growth Boundary. Expansion of the UGB will necessitate updates to the public facility plans to provide capacity to serve new areas. Infrastructure planning can also be sized to accommodate future growth within designated Urban Reserve Areas, providing for more cost-efficient provision of services.	**Scale of Impact – Medium to high.** The HNA concludes a significant deficit of residential lands; ensuring services is essential to transitioning land to a developable state.
D30. Develop infrastructure allocation policies	If there are current infrastructure capacity limits, developing policies to allocate the capacity can provide greater certainty about capacity and allowable density of development phasing in the short term, in support of development, redevelopment, and infill priorities.	**Scale of Impact – Low**. This strategy is primarily about efficient use of infrastructure and timing and will have little impact on land capacity.
D31. Develop alternative mobility network	Planning and developing an alternative mobility network can shift some trips to alternative transportation modes, providing transportation choice and reducing congestion. This can support infill and redevelopment that supports alternative modes in congested areas.	**Scale of Impact – Low**. This will have little impact on housing cost or type, but will ensure livable neighborhoods.
D32. Develop plans that allow for emerging technology	As new technologies emerge, there may be opportunities to reduce demand on certain infrastructure and transportation systems, potentially increasing capacity by reducing travel demand for some trips. Plans should be designed to allow for this technology and be flexible in adapting plans to reduced demand and congestion on systems that may enable additional infill and redevelopment	**Scale of Impact – Unknown**. Not enough is known about the impact of emerging technologies such as autonomous vehicles to predict their impact.
D33. Encourage “to and through” infrastructure policies	These policies ensure infrastructure extensions are sized to serve development as well as to extend beyond the development in the future to serve outlying properties.	**Scale of Impact – Medium to high.** This strategy will have little impact on housing type or affordability, but will ensure adequate capacity to serve lands in a timely and economical manner.

Strategy Name	Description	Scale of Impact
D34. Identify issues and plan for Water Zone 2 infrastructure improvements	The western portion of the UGB is at a higher elevation which requires separate infrastructure for water service within Water Service Pressure Zone 2, which will require a new water storage tank. Buildable lands within the UGB which area in Zone 2 will be unavailable for development until they can be served with water. The investment in the Zone 2 water infrastructure won't occur without sufficient area and timely development to help fund the necessary water infrastructure.	**Scale of Impact – Low**. This strategy will allow development of land included in the BLI.
D35. Identify areas with underutilized infrastructure capacity	Areas with underutilized infrastructure capacity may be evaluated as candidates for additional development intensity of vacant lands or infill and redevelopment opportunities in developed areas.	**Scale of Impact – Low to medium**. This strategy would potentially allow higher density development; impact will depend on market response.
E. Increase Buildable Land Inventory – Developing a 5, 10, 20, and 50 Year Inventory & Phase-In		
E36. Establish an Urban Reserve Area (URA)	Cities may establish Urban Reserve Areas (URAs) for a period of up to 30 years beyond the Urban Growth Boundary (UGB) planning period of 20 years, for a combined period of up to 50 years . These become the highest priority lands for future UGB expansions. Urban Reserve Areas provide an opportunity for efficient infrastructure planning and future urbanization.	**Scale of Impact – Low to high.** URAs are a long-term land supply strategy. The short term impact will be none; the impact 10-20+ years out could be significant in allowing better infrastructure and land supply.
E37. Establish a framework plan for the URA	A framework plan identifies the major land uses, transportation backbone, infrastructure needs, and sequencing for the long-term growth within the URA. As these lands come into the UGB, area plans will be developed to ensure land uses and housing are provided consistent with the long-term framework plan.	**Scale of Impact – Low to high.** URAs are a long-term land supply strategy. The short term impact will be none; the impact 10-20+ years out could be significant in allowing better infrastructure and land supply.
E38. Identify an expanded UGB per the URA	Urban Reserve Planning helps guide where to establish an Urban Growth Boundary to meet needs for the 20-year planning period.	**Scale of Impact – High.** Land supply is one of McMinnville's biggest short-term constraining factors.

Strategy Name	Description	Scale of Impact
E39. Develop area plans for UGB lands identifying housing opportunities	Area plans for the UGB refine the framework plan into a more detailed land use plan for areas within the UGB. Development proposals would require master plans consistent with the area plans.	**Scale of Impact – High.** Land supply is one of McMinnville's biggest short-term constraining factors. This strategy will ensure efficient development of expansion areas.
E40. Develop annexation process to mandate housing types upon annexation per area plans.	Lands brought into the UGB are placed in an urban holding zone, allowing for annexation phasing plans. Annexation would require master plan approval addressing required housing mix and average density, site design, and development standards.	**Scale of Impact – High.** Land supply is one of McMinnville's biggest short-term constraining factors. This strategy will ensure efficient development of expansion areas.
F. Complete "Functional" Planning that Further Affects or Informs the Buildable Land Inventory		
F41. Goal 5 Natural Resource Planning & Policies, incl. wetlands and riparian areas	The City has not adopted certain local "Goal 5" resource policies, which will be required, including a Local Wetland Inventory (LWI) and standards for riparian corridors. These will further affect or inform the capacity of lands within the UGB and future growth areas.	**Scale of Impact – Low.** This strategy may take certain lands off the buildable inventory.
F42. Goal 7 Hazards Planning & Policies, incl. landslide susceptibility	The City has not adopted certain local "Goal 7" policies for hazards, including areas mapped by DOGAMI (The Oregon Department of Geology and Mineral Industries) as high landslide susceptibility. DOGAMI is in the process of refining their mapping which will further inform this work, which could affect or inform the capacity of lands within the UGB and future growth areas.	**Scale of Impact – Low.** This strategy may take certain lands off the buildable inventory.

Strategy Name	Description	Scale of Impact
G. Evaluate Administrative and Procedural Reforms		
G43. Administrative and Procedural Reforms	Regulatory delay can be a major cost-inducing factor in development. Oregon has specific requirements for review of development applications; however, complicated projects frequently require additional analysis such as traffic impact studies, etc. A key consideration in these types of reforms is how to streamline the review process and still achieve the intended objectives of local development policies.	**Scale of Impact - Low**. The level of impact on production of housing and housing affordability will be small and will depend on the changes made to the city's procedures.
G44. Streamline Zoning Code and other Ordinances	Complexity of zoning, subdivision, and other ordinances can make development more difficult, time consuming, and costly. Streamlining development regulations can result in increased development. As part of the streamlining process, cities may evaluate potential barriers to affordable workforce housing and multifamily housing. Potential barriers may include: height limitations, complexity of planned unit development regulations,	**Scale of Impact - Low to medium**. The level of impact on production of housing and housing affordability will depend on the changes made to the zoning code and other ordinances.

Strategy Name	Description	Scale of Impact
II. OTHER STRATEGIES – NON LAND USE (City)		
H. Land Interventions to Reduce Costs and Facilitate Housing Development		
H45. Parcel assembly	Parcel assembly involves the city's ability to purchase lands for the purpose of land aggregation or site assembly. It can directly address the issues related to limited multifamily lands being available in appropriate locations (e.g., near arterials and commercial services). Typical goals of parcel assembly programs are: (1) to provide sites for rental apartments in appropriate locations close to services and (2) to reduce the cost of developing multifamily rental units Parcel assembly can lower the cost of multifamily development because the City is able to purchase land in strategic locations over time. Parcel assembly is more often associated with development of government-subsidized affordable housing, where the City partners with nonprofit affordable housing developers.	**Scale of Impact - Low to medium:** Parcel assembly is most likely to have an effect on a localized area, providing a few opportunities for new multifamily housing development over time**.**
H46. Land Banking	Land banks are public or community-owned entities created to acquire, manage, maintain, and repurpose vacant, abandoned, and foreclosed properties for conversion into productive use. Land banks can play a variety of roles. They can play a very limited role, such as simply acquiring property on behalf of a local municipality, to a broader role of property developer. It is important to note that land banks are not financial institutions: financing comes from developers, banks, and local governments. Land banks may be granted special powers via state enabling legislation. These powers can include the ability to remove legal and financial barriers, such as delinquent property taxes, that often render vacant and abandoned properties inaccessible or unattractive to the private market. Land banks acquire properties through different means, but the most common pipeline is the property tax foreclosure system.	**Scale of Impact - Low to medium: L**and banking would have the biggest impact on production of low- and moderate-income affordable housing. Considering how difficult it can be to build this type of affordable housing, and the level of need for affordable housing, land banking could encourage development of more affordable housing types.

Strategy Name	Description	Scale of Impact
H47. Community Land Trust (CLT)	A Community Land Trust (CLT) creates permanent affordability by severing the value of the land and the improvements (i.e., the house). The land is held in trust by a nonprofit or other entity then leased to the homeowner. The homeowner enjoys most of the rights of homeownership, but restrictions are placed on use (e.g., owner occupancy requirement) and price restrictions on resale ensure that the home remains affordable. CLTs may be used in conjunction with land banking programs, where the city or a nonprofit housing corporation purchases a future site for affordable housing or other housing that meets community goals. A variation to the community land trust is to have the City own the property rather than the land trust, and lease property to income-qualifying households (such as low-income or moderate-income households) to build housing. The City would continue to own the land over the long-term but the homeowner would be able to sell the house. Restrictions on resale ensure that the home remains affordable.	**Scale of Impact - Low to medium:** A land trust will have the biggest impact on production of low- and moderate-income affordable housing. Considering how difficult it is to build this type of affordable housing and the level of need for affordable housing, a land trust could increase nonprofits' capacity to build affordable housing.
H48. Public Land Disposition	The public sector sometimes controls land that has been acquired with resources that enable it to dispose of that land for private and/or nonprofit redevelopment. Land acquired with funding sources such as tax increment, EB5, or through federal resources such as CDBG or HUD Section 108 can be sold or leased at below market rates for various projects to help achieve redevelopment objectives. This increases development feasibility by reducing development costs and gives the public sector leverage to achieve its goals via a development agreement process with the developer. Funding can come from Tax Increment, CDBG/HUD 108, EB-5.	**Scale of Impact - Low to medium:** Using public land would have the biggest impact on production of low- and moderate-income affordable housing. Impact varies considering how difficult it is to build this type of affordable housing and the level of need for affordable housing.
I. Financial Incentives and Affordable Housing Subsidy & Assistance Programs to Retain Housing Stock, Add Supply, and Help People Afford Housing (Tax abatement programs that decrease operational costs by decreasing property taxes, Programs to lower the cost of development)		
I49. Multiple-Unit Limited Tax Exemption Program (Locally Enabled and Managed)	Multi-unit projects receive a ten-year property tax exemption on structural improvements to the property as long as program requirements are met. There is no ground floor active use requirement for this tool. The City of Portland's program, for example, limits the number of exemptions approved annually, requires developers to apply through a competitive process, and encourages projects to provide greater public benefits to the community. This program is enabled by the state, but managed by the local jurisdiction.	**Scale of Impact – Low to medium**. The design of the tax abatement program will impact whether and how many developers use the tax abatement, which will affect the scale of the impact.

Strategy Name	Description	Scale of Impact
I50. Affordable Housing Property Tax Abatement	There are several statutory authorizations for different types of affordable housing property tax abatements which could apply to affordable housing developments that aren't already tax exempt. Some of these can be designated for a limited duration. Some of these are authorized by statute and require local enabling legislation or approvals.	**Scale of Impact – Low to medium**. The design of the tax abatement program will impact whether and how many developers use the tax abatement, which will affect the scale of the impact.
I51. Vertical Housing Tax Abatement (Locally Enabled and Managed)	Subsidizes "mixed-use" projects to encourage dense development or redevelopment by providing a partial property tax exemption on increased property value for qualified developments. The exemption varies in accordance with the number of residential floors on a mixed-use project with a maximum property tax exemption of 80% over 10 years. An additional property tax exemption on the land may be given if some or all of the residential housing is for low-income persons (80% of area is median income or below). The proposed zone must meet at least one of the following criteria: • Completely within the core area of an urban center. • Entirely within half-mile radius of existing/planned light rail station. • Entirely within one-quarter mile of fixed-route transit service (including a bus line). • Contains property for which land-use comprehensive plan and implementing ordinances effectively allow "mixed-use" with residential.	**Scale of Impact – Low to medium**. The design of the tax abatement program will impact whether and how many developers use the tax abatement, which will affect the scale of the impact.
I52. Financial incentives supporting inclusionary zoning	In addition to regulatory mandates and incentives for inclusionary zoning, there can be financial incentives to help achieve inclusionary zoning, or to help increase the level of affordability or percentage of affordable units. If a City adopts both inclusionary zoning and a Construction Excise Tax, a city must offer certain incentives for developments subject to inclusionary zoning.	**Scale of Impact – Low to medium**. The design of the program will impact whether and how many developers use the incentives which will affect the scale of the impact.

Strategy Name	Description	Scale of Impact
I53. SDC Financing and Credits	Enables developers to spread their SDC payment over time, thereby reducing upfront costs. Alternately, credits allow developers to make necessary improvements to the site in lieu of paying SDCs. Note that the City can control its own SDCs, but often small cities manage them on behalf of other jurisdictions including the County and special districts. Funding can come from an SDC fund or general fund. In some cases there may be no financial impact. Can come in the form of student, low-income, or workforce housing. An additional variation is deferral of SDC payment from time of building permit issuance to when the building is occupied, which can reduce up-front costs, but can potentially present create administrative issues.	**Scale of Impact – Low.** The City may consider changes in SDCs to allow financing, but the City would want to ensure that the impact should be spread-out and non-negatively impact one entity.
I54. Sole Source SDCs	Retains SDCs paid by developers within a limited geographic area that directly benefits from new development, rather than being available for use city-wide. This enables SDC eligible improvements within the area that generates those funds to keep them for these improvements. Improvements within smaller areas can enhance the catalytic and redevelopment value of the area. This tool can also be blended with other resources such as LIDs and TIF. Funding can come from an SDC fund or general fund. In some cases there may be no financial impact. The housing can come in the form of student, low income, or workforce housing. However, in some cases, this could limit the ability to aggregate SDC resources regardless of geographic area for larger infrastructure projects.	**Scale of Impact – Low to medium**. Depends on extent to which SDCs can be aggregated to complete larger projects.
I55. Reduced or waived planning fees, permit fees, SDCs for affordable housing	Planning fees, permit fees, and SDCs cam be reduced or waived for qualifying affordable housing developments. McMinnville has already enacted planning, permit, and certain SDC waivers for qualifying affordable housing developments.	**Scale of Impact – Low**. McMinnville has already enacted planning, permit, and certain SDC waivers for qualifying affordable housing developments.
I56. General Fund Grants or Loans	Through the annual budget process, the City can allocate funds to assist affordable housing developments. Assistance can also be provided through no- or low-interest loans. That typically occurs in conjunction with a revolving loan fund that allows the fund to grow over time as loans are repaid.	**Scale of Impact – Unknown**. Impact is dependent on obtaining grants.

Strategy Name	Description	Scale of Impact
I57. Home ownership programs	Cities (and other partners) use a variety of programs to assist with homeownership • **Homebuyer Assistance Programs.** These Down Payment Assistance loans help low- or moderate-income households cover down payment and closing costs to purchase homes on the open market. These programs either give loans or grants, most frequently to first time homebuyers. • **Inclusionary Housing Program.** Some cities have an Inclusionary Housing Ordinance (IH) requires that new residential development contribute at least 20% of the total units as permanently affordable housing. Options for meeting this requirement can be allow the affordable units to be located on or off site. Cities that use inclusionary housing generally have programs to ensure that housing continues to be affordable over the long-term. • **Partnerships**. Cities often work with partnerships with nonprofit agencies that provide homeownership assistance.	**Scale of Impact - Low**. While homeownership programs are important, limited funds mean that the number of households that benefit from homeownership programs is relatively small.
I58. Rental assistance programs	Cities (and other partners) use a variety of programs to provide rental assistances • **Section 8 Voucher**: This assistance subsidizes the difference between 30 to 40 percent of a household's income and the area's Fair Market Rent (FMR). • **Rental assistance programs**. These programs offer a range of services, such as assistance with security deposits. • **Rent Control**. Rent control regulations control the level and increases in rent, over time resulting in rents that are at or below market rates. • **Partnerships**. Cities often work with partnerships with nonprofit agencies that provide rental assistance.	**Scale of Impact - Low**. Renter assistance programs are important. However, limited city funds mean that the number of households that benefit from rental assistance resulting from city funding is relatively small.
I59. Housing Rehabilitation Programs	Cities (and other partners) often offer home rehabilitation programs, which provide loans to low- and moderate-income households for rehabilitation projects such as making energy efficiency, code, and safety repairs. Some programs provide funding to demolish and completely reconstruct substandard housing.	**Scale of Impact - Low**. Limited fund availability means that relatively few households will be able to access housing rehabilitation funds.
I60. Non-regulatory programs and incentives to	While rehabilitation programs can help preserve housing supply there are other strategies that can help preserve housing supply, or affordable housing supply. For example, if a long-term deed restriction requiring affordable rents for a specified period is	**Scale of Impact - Low**. Impact would be limited by the availability of funding.

Strategy Name	Description	Scale of Impact
preserve existing housing supply	set to expire, an affordable housing agency may acquire a property to retain the housing as affordable units.	
J. Tools to Help Fund Infrastructure or Facilitate Equitable & Timely Extension of Infrastructure		
J61. Local Improvement District (LID)	This tool is a special assessment district where property owners are assessed a fee to pay for capital improvements, such as streetscape enhancements, underground utilities, or shared open space. LIDs must be supported by a majority of affected property owners and setting up fair LID payments for various property owners, who are located different distances from the improvement can be challenging. However, if successful it succeeds in organizing property owners around a common goal. It also allows property owners to make payments over time to bring about improvements quickly that benefit them individually. LIDs can also be bundled with other resources, such as TIFs.	**Scale of Impact – Low to medium**. This tool can only be used when certain majority requirements are met for properties to be assessed.
J62. Reimbursement District	A reimbursement district is a tool that provides equity if the City or a developer must extend public facilities along other properties in order to enable development of a property. If intervening properties connect to the infrastructure extended at the expense of the developer or City, a reimbursement district allows the City or developer who paid for the extension to recoup costs that would have been incurred by the intervening properties if they had to extend it on their own at the time of their development. Unless or until the intervening property develops in a manner that would have required the infrastructure extension, there is no assessment. Therefore, there is no assurance that the City or developer that installed the infrastructure will recoup the costs. This tool can overcome a situation where a developer may be hesitant to extend services if the intervening property can connect for free at developer's expense.	**Scale of Impact – Low to medium**. This tool doesn't provide a new funding source, but may sometimes impact decisions to extend infrastructure to serve new development.

<table>
<tr><th>Strategy Name</th><th>Description</th><th>Scale of Impact</th></tr>
<tr><td colspan="3">K. Programs and Revenue Sources to Generate Revenue to Fund Subsidy Programs and Incentives (Sources of funding to pay for infrastructure to support development)</td></tr>
<tr><td>K63. Urban Renewal / Tax Increment Finance (TIF)</td><td>Tax increment finance revenues are generated by the increase in total assessed value in an urban renewal district from the time the district is first established. As property values increase in the district, the increase in total property taxes (i.e., City, County, school portions) is used to pay off the bonds. When the bonds are paid off, the entire valuation is returned to the general property tax rolls. TIFs defer property tax accumulation by the City and County until the urban renewal district expires or pays off bonds. Over the long term (most districts are established for a period of 20 or more years), the district could produce significant revenues for capital projects. Urban renewal funds can be invested in the form of low-interest loans and/or grants for a variety of capital investments:
Redevelopment projects, such as mixed-use or infill housing developments
Economic development strategies, such as capital improvement loans for small or start up businesses which can be linked to family-wage jobs
Streetscape improvements, including new lighting, trees, and sidewalks
Land assembly for public as well as private re-use
Transportation enhancements, including intersection improvements
Historic preservation projects
Parks and open spaces</td><td>Scale of Impact – Medium. Urban Renewal funding is a flexible tool that allows cities to develop essential infrastructure or provides funding for programs that lower the costs of housing development (such as SDC reductions or low interest loan programs). Portland used Urban Renewal to catalyze redevelopment across the City, including the Pearl District and South Waterfront.</td></tr>
<tr><td>K64. Affordable Housing Construction Excise Tax (CET)</td><td>An affordable housing construction excise tax (CET) is a tax on the value of new construction that is used to fund affordable housing. CETs are governed by state law but provide local control over some aspects of the tax structure, rates, etc.

A CET can be established using a flat rate or a tiered/marginal rate, which can help further affordable housing objectives.

(Legislative Authorization: SB 1533, 2016)</td><td>Scale of Impact – Low to medium. Impacts would depend on (1) the amount of the tax, (2) the amount of revenue generated, and (3) how the funds are invested.</td></tr>
</table>

Strategy Name	Description	Scale of Impact
K65. Linkage Fees for Non-Residential Development	Linkage fees are a type of impact fee based on the source of the impact. In this case, the fee is based on the impact of commercial and industrial development creating additional housing demand. New nonresidential development generates jobs, which triggers housing needs for their workers. Commercial and/or industrial developers are charged fees, usually assessed per square foot, which then are used to build new housing units. A communitywide analysis is usually performed to estimate the type and amount of jobs and wages that are expected to be generated by new development.	**Scale of Impact – Low to medium**. Impact is dependent on the design of the program which will determine how many projects are required to pay fees.
K66 & 67. General Fund and General Obligation (GO) Bonds	The city can use general fund monies on hand or can issue bonds backed by the full faith and credit of the city to pay for desired public improvements. GO Bonds require a public vote which can be time-consuming and costly. GO Bonds also raise property owner taxes.	**Scale of Impact – Medium to high.** GO Bonds can be used to develop essential infrastructure or provides funding for programs that lower the costs of housing development (such as SDC reductions or low interest loan programs).
K68. Transient Lodging Tax (TLT) – Up to 30% for Affordable Housing (SB595)	This legislation would enable cities with a local transient lodging tax to use a portion for affordable housing. Currently 70% of local funds must go to tourism, and 30% can be allocated to general fund. SB595 would authorize a maximum of 30% be dedicated for affordable housing, authorized to be deducted from the 70% for tourism. *(Legislative Authorization: SB595, 2019, pending)*	**Scale of Impact – Low to moderate** Would require Council action to appropriate funds for housing and the amount of funding. Would provide a stable annual funding source dedicated to affordable housing.

Strategy Name	Description	Scale of Impact
K69. Community Development Block Grants (CDBG) (Federal Program, Locally Administered)	Community Development Block Grants (CDBG) provide communities with resources to address a range of community development needs, including infrastructure improvements, housing and commercial rehab loans and grants, as well as other benefits targeted to low- and moderate-income persons. Funds can be applied relatively flexibly. This program has been run since 1974, and is seen as being fairly reliable, but securing loans/grants for individual projects can be competitive. Some drawbacks to CDBG funds include: • Administration and projects must meet federal guidelines such as Davis Bacon construction requirements. • Amount of federal funding for CDBG has been diminishing over the past few years. • CDBG program is not in the control of the City.	**Scale of Impact – Unknown**. Impact is dependent on qualifying as an entitlement community with an annual appropopriation or obtaining grants competitively through the state/small cities program
p/o K69. CDBG – Section 108 (Federal Program, Locally Administered)	HUD Section 108 increases the capacity of block grants to assist with economic development projects by enabling a community to borrow up to five times its annual CDBG allocation. These funds can be fairly flexible in their application. The program has been in operation since 1974 and has gained reliability. It enables a larger amount of very low interest-rate-subordinate funding for eligible projects. As with CDBGs, the process of securing the loan can be competitive.	**Scale of Impact - Low**. Section 108 funds could be used to help finance development of some affordable housing but would only cover a portion of the affordable housing development.
K70. Housing Trust Funds	Housing trust funds are designed locally so they take advantage of unique opportunities and address specific needs that exist within a community. Housing trust funds support virtually any housing activity that serves the targeted beneficiaries and would typically fund new construction and rehabilitation, as well as community land trusts and first time homeowners. This tool is often used in cities with inclusionary zoning ordinances, which generates fees to fund development of the housing trust fund. Successfully implementing this tool requires a dedicated funding source.	**Scale of Impact – Unknown**. Impact is dependent on program design.

Strategy Name	Description	Scale of Impact
K71. Fees or Other Dedicated Revenue	Directs user fees into an enterprise fund that provides dedicated revenue to fund specific projects. Examples of those types of funds can include parking revenue funds, stormwater/ sewer funds, street funds, etc. The City could also use this program to raise private sector funds for a district parking garage wherein the City could facilitate a program allowing developers to pay fees-in-lieu or "parking credits" that developers would purchase from the City for access "entitlement" into the shared supply. The shared supply could meet initial parking need when the development comes online while also maintaining the flexibility to adjust to parking need over time as elasticity in the demand patterns develop in the district and influences like alternative modes are accounted for. Funding can come from residents, businesses, and developers. Also these fees or revenues allow for new revenue streams into the City.	**Scale of Impact – Unknown**. Impact is dependent on program design.
L. Education and Outreach		
L72. Education and Outreach	Ensure housing developers are aware of regulatory changes that authorize additional housing options or flexibility. Provide information that explains housing options that are already available under existing zoning and building codes, but may use different terminology than is commonly recognized.	**Scale of Impact – Low**.
M. Advocacy for State/Federal Legislative Actions that Increase State Agency Program Funding Available to Fund Affordable Housing		
M73. State Affordable Housing Funding	This legislation would change the tax income code to eliminate certain deductions, and the resulting revenues would fund state affordable housing programs. *(Legislation: HB 3349, 2019, pending)*	**Scale of Impact – Unknown**.
N. Apply for and Utilize State, Federal, and Foundation Resources		
N74. Use grants, programs, and technical resources when available and cost-effective	Continue to utilize grant funds and other resources when available to fund housing related planning and housing-related programs.	**Scale of Impact – Unknown**. Impact is dependent on obtaining grants.

Strategy Name	Description	Scale of Impact
O. Partnerships		
O75. Misc. Partnerships	Placeholder Only – To Capture Ideas / Discussion	
P. Strategies and Tools Employed by Organizations Other Than the City		
P76. Misc. Strategies	Placeholder Only – To Capture Ideas / Discussion	
P77. Oregon Affordable Housing Tax Credit (OAHTC)	The City is directly not involved in this program. The 1989 Oregon Legislature created the **Oregon Affordable Housing Tax Credit Program (OAHTC)**. Under the OAHTC Program, the Department has the authority to certify tax credits for projects. Through the use of tax credits, lending institutions are able to lower the cost of financing by as much as four percent for housing projects or community rehabilitation programs serving low-income households. The savings generated by the reduced interest rate must be passed directly to the tenant in the form of reduced rents.	**Scale of Impact – Low to medium**. The city is not directly involved in this program.
P78. Low Income Housing Tax Credits (LIHTC)	The Low Income Housing Tax Credit Program (LIHTC) is an incentive to encourage the construction and rehabilitation of rental housing for lower-income households. The program offers credits on federal tax liabilities for 10 years. Individuals, corporations, partnerships and other legal entities may benefit from tax credits, subject to applicable restrictions. Annually, the U.S. Department of Treasury allocates tax credits to each state. Oregon Housing and Community Services (OHCS) administers' the tax credit program for the state of Oregon. Tax credits offer direct federal income tax savings to owners of rental housing developments who with a developer are willing to set-aside a minimum portion of the development's units for households earning 60 percent or less of gross area median income. Developers of tax credit developments typically sell the credits to investors who are willing to provide capital in return for the economic benefits (including tax credits) generated by the development.	**Scale f Impact – Moderate to high.** The city is not directly involved in this program.

Land Use Action	Aggregate Results (2 groups)
A9. Allow more housing types	81
A2. Diverse Housing Zone. Explore residential zoning with targeted/ minimum density and multiple allowed housing types	73
A3. Develop a high density residential zone	73
D28. Update infrastructure plans for infill development	67
A13. Promote Infill Development, Allowing Flexibility in Existing Zones with Appropriate Design and Development Standards	60
A4. Allow Small Residential Lots	58
A8. Allow Clustered Residential Development	57
E36. Establish an Urban Reserve Area (URA)	57
D29. Update infrastructure plans for growth lands	53

Executive Summary

This section summarizes the high-level findings from the analysis of land sufficiency of employment and public or institutional land in the McMinnville urban growth boundary (UGB).

Background

The City of McMinnville is in the process of reviewing future land needs and sufficiency of its Urban Growth Boundary to meet those needs for a 20-year planning period beginning in 2021, the earliest date by which the City would have a program in place to meet the identified needs.

This evaluation process requires several technical studies. These include:

- a housing needs assessment (HNA) and residential buildable land inventory,
- a Goal 9 compliant Economic Opportunities Analysis (EOA) and an employment buildable lands inventory, and
- an assessment of public and institutional land needs (e.g., parks, schools, etc).

These analyses are combined into a report called an "Urbanization Study" which allows the City of McMinnville to assess whether there is sufficient land within the Urban Growth Boundary (UGB) to accommodate land needs for the 20-year period between 2021 and 2041.

How much growth is McMinnville planning for?

McMinnville is growing. Exhibit 1 summarizes population and employment forecasts for McMinnville. The population forecast projects that McMinnville will grow at 1.36% annually for the 2021-2041 period and 1.20% annually for the 2021-2067 period. The population forecast is based historic population growth trends, demographic changes and trends, and recent development trends. The employment forecast projects employment growing at the same rate as population.

Exhibit 1. Population and employment forecasts, McMinnville UGB, 2021-2041, 2021-2067

Year	Population	Total Employment
2021	36,238	22,157
2041	47,498	29,042
2067	62,803	38,158
Change 2021-2041		
Number	11,260	6,885
Percent	31%	31%
AAGR	1.36%	1.36%
Change 2021-2067		
Number	26,565	16,001
Percent	73%	72%
AAGR	1.20%	1.19%

Source: ECONorthwest

How much employment land does McMinnville currently have?

McMinnville has 7,535 acres within the Urban Growth Boundary (UGB). Of this, about 6,485 acres are in tax lots; the remaining lands are in public right-of-ways, primarily streets, and the Yamhill River. About 1,678 acres are in tax lots with a public or institutional use. The 4,807 remaining acres are on commercial, industrial, or residential land.

There are approximately 1,388 acres of employment land in tax lots, with 857 committed acres, 111 constrained acres, and 421 buildable acres of employment land. This includes 97 buildable acres of commercial land and 324 buildable acres of industrial land. Exhibit 2 summarizes the buildable lands inventory for employment lands. All of the buildable employment lands are in Water Pressure Zone 1. Some higher elevation areas within the westerly UGB are in Water Pressure Zone 2, which requires new infrastructure to serve that zone before the land can develop.

Exhibit 3 shows a map of the buildable employment land by zone. Some properties are subject to “Planned Development” overlays which provide unique land use regulations for certain properties. The classifications are listed below by zone. A few properties still have rural zoning, and are therefore classified by their urban commercial or industrial plan designation, which specifies the zoning and uses that will apply when rezoned. Planned Development overlays are addressed in the EOA for specific properties as needed.

Exhibit 2. Unconstrained buildable vacant and partially vacant land by zoning, McMinnville UGB, 2019

Zone/Plan Designation	Total buildable acres	Buildable acres on vacant lots	Buildable acres on partially vacant
Commercial	**97**	**63**	**33**

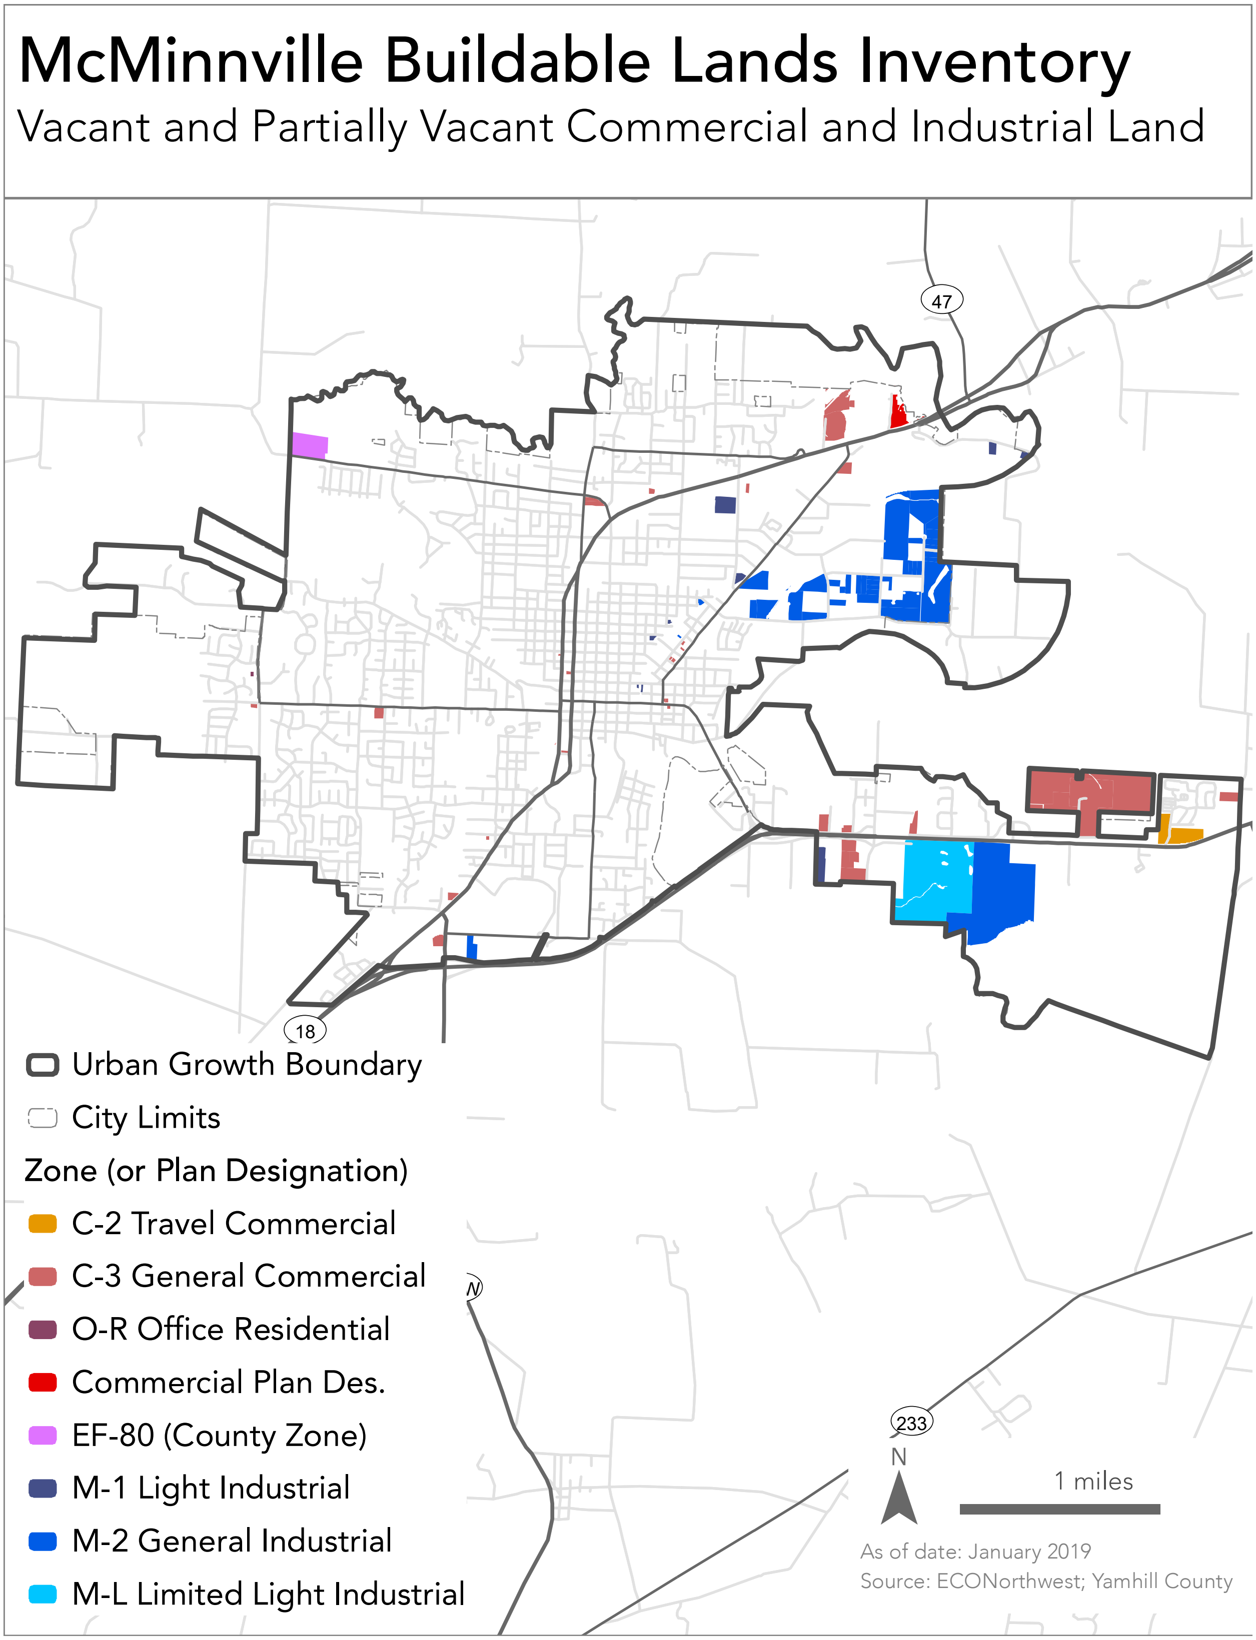
Exhibit 3. Buildable employment land by zone with development constraints, McMinnville UGB, 2019



How much land will be required for employment?

Context

The City last updated its Economic Opportunities Analysis (EOA) in 2013, which was adopted and acknowledged. In 2019, the City adopted the MAC-Town 2032 Economic Development Strategic Plan (EDSP).

The current EOA update bring the 2013 document to the current 20-year planning period of 2021-2041, incorporating new trend and forecast data, and ensuring the City's land use planning documents provide the land use foundation to support the City's newly adopted economic development strategy, and ensure the Comprehensive Plan supports that strategy. It also considers a longer 46-year planning period. Since the City's economic development strategy is articulated in the new EDSP, this EOA update supports and references that work, but the scope didn't duplicate the work that was completed in the EDSP.

Demand

McMinnville will need about 741 gross acres (384 industrial and 357 commercial) for employment for the 2021 to 2041 period and 954 gross acres (384 industrial and 570 commercial) for the 2021 to 2067 period.

Demand was calculated in following components:

- By developing an employment forecast and assigning employment density factors to determine associated land needs, Employment forecasts indicate that McMinnville will add 6,885 jobs between 2021 and 2041 and 16,001 jobs between 2021 and 2067. ***For this component of the demand, McMinnville will need at least 405 gross acres (153 industrial and 252 commercial) for employment for the 2021 to 2041 period and 899 gross acres (329 industrial and 570 commercial) for the 2021 to 2067 period.***
- By removing the following employment from the employment forecast, and instead estimating land needs for these employers based on interviews with the respective entities: local government, K-12, and higher education. ***These are discussed in the public and institutional land needs section of the Urbanization Summary report, and are not discussed in the land sufficiency analysis for commercial and industrial employment.***
- The City assumed 5% of new employment would be accommodated on sites that don't require new vacant land, through infill, redevelopment, and locations that don't require new employment land.
- By identifying the existing retail leakage identified in a market analysis, which identifies existing deficits in the base year which are not otherwise accounted for in the forecast of future employment from 2021-2041. ***McMinnville will need about 12.2 acres to address existing retail leakage.***
- By estimating other needed sites which are not accounted for in the average density assumptions. The sites for these uses are unique and not accounted for in the standard employment density factors. These are target industries and uses in the MAC-Town

2032 Economic Development Strategic Plan. ***McMinnville will need 104 acres for other needed sites on commercial (e.g., land needs not accounted for in the employment projections) in the 2021 to 2041 period.*** A net increase of 93 acres when adjusting the employment forecast to reflect these unique site needs and adjustments to average density assumptions for these sites and uses.

- Calculation of additional needed sites on industrial land, based on target industries identified in the EDSP, resulted in ***overall demand for 384 acres of industrial land***.

Supply

In 2019, within the UGB, McMinnville has 421 buildable acres of employment land, with 370 buildable acres in vacant lots and 50 buildable acres in partially-vacant lots. This includes 97 buildable acres of commercial land and 324 buildable acres of industrial land. By 2021, the forecast assumes there will have been demand for 31 gross acres of employment land: 11 gross acres of industrial land and 20 gross acres of commercial land. That leaves a 2021 supply of 390 buildable acres of employment land: 313 buildable acres of industrial land and 77 buildable acres of commercial land

- **Commercial.** Of the 97 buildable acres of commercial land, about 63 acres are in vacant lots, and 33 acres are in partially-vacant lots. About 27 acres (approximately 30% of the buildable commercial land) is on the Evergreen property, which is subject to a Planned Development that limits uses to tourism-related uses consistent with the master plan. There are only about two dozen tax lots with buildable commercial acreage, and only some of these contiguous. There are about a half dozen sites or contiguous properties that have buildable acreage over five acres, accounting for about 72% of the buildable acres.
- **Industrial.** Of the 324 buildable acres of industrial land, about 307 acres are in vacant lots, and 17 acres are in partially-vacant lots. About 55% of the supply (177 acres) is in two tax lots over 50 acres, about 88 and 90 acres. One site is just under 50 buildable acres (15% of the supply), and the remaining sites are below 15 buildable acres.

Sufficiency

Exhibit 4 shows the capacity of unconstrained vacant land and the demand for employment land over the 5-, 10-, 20-, and 46-year planning periods, as well as the pre-2021 period.

Exhibit 4. Comparison of the capacity of unconstrained vacant land with employment land demand by land use type, McMinnville UGB, 2019–2021, 2021–2026, 2021–2031, 2021–2041, and 2021–2067

	2019-2021			5-year (2021-2026)			10-year (2021-2031)			20-year (2021-2041)			46-year (2021-2067)

How much land will be required for public or institutional uses?

Land needed for public or institutional use in McMinnville is shown in Exhibit 5. These needs are not addressed in the HNA or EOA documents, but will be included in the Urbanization Study report. (Appendix E. Public and Institutional Land Need provides the detailed results for public and institutional uses.) McMinnville will need an additional 473 acres in the 2021 to 2041 period and 780 acres in the 2021-2067 period.

Source: ECONorthwest

1. Introduction

This report presents an update to the 2013 Economic Opportunities Analysis (EOA) for the City of McMinnville. The purpose of an EOA is to develop information as a basis for policies that capitalize on McMinnville's opportunities and help address the City's challenges. In 2019, the City adopted the *MAC-Town 2032 Economic Development Strategic Plan*. This EOA Update is intended to:

- Provide the analysis and land use foundation necessary to achieve the City's economic development strategy.
- Identify policy issues that will need to be reflected in the Comprehensive Plan to achieve the economic development strategy.
- Update the trend data and forecasting, the buildable land inventory, and employment land needs to a common planning period with the City's housing needs analysis and other land needs. This update is part of an urbanization report to inform the strategy and identify land needs for a 20-year planning period to determine sufficiency of buildable lands and land use policies to meet identified needs consistent with the City's vision. Additional long-term and short-term planning periods are also analyzed consistent with planning for Urban Reserves and to ensure adequate short-term supply of needed sites.

This version of the EOA is intended to provide an update to the previous 2013 EOA, and thus retains portions of the content and narrative throughout. Where necessary, this update uses updated data on employment trends and commercial and industrial land needs, as well as refined approaches to methods for forecasting employment growth. The competitive advantages (i.e., advantages and disadvantages) for economic development in McMinnville did not change substantially since evaluation of these factors in the 2013 EOA or the *MAC-Town 2032 Economic Development Strategic Plan* adopted in 2019. This 2020 EOA updates the information included in the 2013 EOA to include the new information on competitive advantages and the target industries identified in the Strategic Plan, with consideration for any outdated information.

Contents, Format, and Guiding Requirements

The EOA includes technical analysis to address a range of questions that McMinnville faces in managing its commercial and industrial land. For example, the EOA includes an employment forecast that describes how much growth McMinnville should plan for over the planning period and identifies the amount and type of employment land necessary to accommodate growth in McMinnville over that period. The EOA also includes an inventory of commercial and industrial land within McMinnville's urban growth boundary (UGB) to provide information about the amount of land available to accommodate employment growth.

This EOA complies with the requirements of statewide planning Goal 9, the Goal 9 administrative rules (OAR 660 Division 9), and the court decisions that have interpreted them. Goal 9 requires cities to identify the characteristics of sites needed to accommodate industrial and other employment uses (OAR 660-009-0025(1)) over the 2021-2041 20-year planning period. This approach could be characterized as a *site-based* approach that projects land need based on the forecast for employment growth, the City's economic development objectives, and the specific needs of target industries. This updated analysis is more comprehensive than the State requires, as it looks at the employment needs for a 5-, 10-, and 46-year period, in addition to the 20-year period. The shorter-term analyses are intended to identify immediate employment land needs and strategies given current land-need deficiencies, and the 46-year analysis can provide a basis for the establishment of urban reserve areas (URAs).

Background

The City adopted an updated EOA in 2013. It provided the following history of work prior to the 2013 EOA update:

McMinnville's Comprehensive Plan, as adopted in 1981, consists of three interrelated volumes:

- Volume I – covering background information for the plan process
- Volume II – listing adopted goals and policies
- Volume III – consisting of implementation ordinances and measures including the comprehensive plan and zoning maps, annexation, zoning and land division ordinances, and planned development overlays on areas of special significance

In 2001, the City of McMinnville completed an Economic Opportunities Analysis (EOA) aimed to "inventory all non-residential lands and conduct an analysis of its future commercial and industrial land needs, consistent with the requirements of current Statewide Planning Goals, laws, and administrative rules." The EOA identified a potential surplus of industrial land and a deficit of commercial land over what was then a 20-year forecast horizon of 2000-2020. The EOA was approved by the City Council in February 2002 and subsequently acknowledged by the State Land Conservation and Development Commission (LCDC).

In 2003, a McMinnville Growth Management and Urbanization Plan (MGMUP) was adopted as an element of the Comprehensive Plan. This document provided guiding principles and a development concept for future growth, including a proposed expansion of McMinnville's Urban Growth Boundary (UGB).

In conjunction with this process, the City also updated the work of the 2001 EOA with respect to a revised Population and Employment Justification and a Revised Buildable Land Analysis, to bring these analyses current to the January 1, 2003 starting benchmark of the UGB review process. In effect, the 20-year planning horizon was shifted from 2000-2020 by three years to 2003-2023. In addition, the buildable lands analysis was updated to reflect changes that occurred between 2001 and 2003, and land need projections were adjusted accordingly.

The MGMUP documented the need for UGB expansion approaching 1,125 buildable acres (to meet needs for 2003-2023), with more than 90% of the need accounted by proposed expansion of land for residential, parks and related public uses. The remaining 9% represented land documented as needed for commercial development. The MGMUP was approved by LCDC, but then appealed by private parties to the Oregon Court of Appeals for issues related to prioritization of the types of agricultural land that can be added to the UGB. The Court eventually reversed and remanded LCDC's approval; LCDC subsequently reversed and remanded their action to the City of McMinnville.

2013 EOA Update

The City of McMinnville last conducted a Goal 9-compliant analysis and evaluation of economic trends in the 2013 EOA update, which was based on 2010 Census and other employment data. The 2019 Economic Development Strategic Plan also included a Demographic and Economic profile of McMinnville.

The 2013 EOA acknowledged that due to the prior Court of Appeals decision, "a previously determined 106-acre deficiency of commercial land for McMinnville's' 20-year need has not been fully remedied. While the City of McMinnville is not pursuing any proposal to increase its UGB at this time, the need to address the potential imbalance of commercial and industrial land requirements has become more apparent due to the effects of a changing global, regional and local economy…"

The 2013 EOA stated, "As noted, while always an option for potential consideration, this EOA update assumes that McMinnville's UGB will not be expanded during the updated 20-year forecast period for purposes of providing non-residential (or employment) land need; rather, any needs for added forecast employment growth are anticipated to be accommodated through efficiency or other measures as available to avoid UGB expansion." The 2013 EOA found a 36-acre shortfall of commercial land for the 2013-2033 planning period, and a surplus of industrial land. This resulted in findings that led to subsequent rezoning of some of the surplus industrially-zoned acreage to commercially-zoned acreage in response to identified commercial land deficits.

Planning Area Definition

The EOA provides the data and analysis necessary to evaluate the sufficiency of McMinnville's UGB to meet needs for the identified planning period. As such, it includes an evaluation of the buildable lands within McMinnville's current UGB (as illustrated by the Comprehensive Plan map on the following page). This EOA also provides discussion of the Yamhill County, regional, statewide and national context within which local economic development opportunities are appropriately framed. The report provides information that will be needed to address UGB and Urban Reserve needs for any deficit of lands that isn't met within the current UGB. It also provides information about site needs and characteristics that will assist with UGB an Urban Reserve alternatives analysis. The analysis area for alternatives analysis is articulated in state law and will be addressed in a separate step in this review.

Community Economic Development Objectives

Current community objectives for economic development can be found as part of the following City documents:

MAC-Town 2032 Strategic Plan (adopted 2019)

In 2019, McMinnville adopted the *MAC-Town 2032 Strategic Plan*, which includes new vision, mission, and values statements. It also includes goals for seven strategic priorities, and for each goal, there are identified objectives and priority actions. Additional actions are also identified.

Vision, Mission, Values

Vision

A collaborative and caring city inspiring an exceptional quality of life.

Mission

The City of McMinnville delivers high-quality services in collaboration with partners for a prosperous, safe, and livable community.

Values

- **Stewardship.** We are responsible caretakers of our shared public assets and resources. We do this to preserve the strong sense of community pride which is a McMinnville trademark.
- **Equity.** We are a compassionate and welcoming community for all – different points of view will be respected. Because not all members of our community are equally able to access our services or participate in public process, we commit ourselves to lowering these barriers.
- **Courage.** We are future-oriented, proactively embracing and planning for change that is good for our community and consistent with our values.
- **Accountability.** We believe healthy civil discourse is fostered through responsive service and clear, accurate, useful information.

Strategic Priorities. To move McMinnville toward its vision, the City believes it will need to make disproportionate investment in time and resources in these areas.

One of these strategic priorities is Economic Prosperity, with the following goal and objectives. Each objective also has associated priority actions.

- Goal: Provide economic opportunity for all residents through sustainable growth across a balanced array of traditional and innovative industry sectors.
- Objectives:
  - Accelerate growth in living wage jobs across a balanced array of industry sectors

- Improve systems for economic mobility and inclusion
- Foster opportunity in technology and entrepreneurship
- Be a leader in hospitality and place-based tourism
- Locate higher job density activities in McMinnville
- Encourage connections to the local food system and cultivate a community of exceptional restaurants

MAC-Town 2032 Economic Development Strategic Plan (adopted 2019)

In 2019, McMinnville adopted the *MAC-Town 2032 Economic Development Strategic Plan*, which updated the City's mission and goals related to economic development, as a supplement to the goals and policies in the Strategic Plan and Comprehensive Plan. The mission in the Plan states:

> "McMinnville provides economic opportunity for all residents through sustainable growth across a balanced array of traditional and innovative industry sectors, from steel manufacturing to technology. Economic growth is collaborative, and inclusive of individuals from diverse backgrounds. Businesses leverage local and regional talent pipelines while attracting new employees and residents who value McMinnville's high quality of life. Our strong downtown serves residents and visitors alike, featuring unique shops and world-class restaurants that offer locally-produced food products and globally-renowned wine. As we evolve, we prize our small-town roots and we maintain McMinnville's character."

The "foundational goals and strategies" defined in the plan are:

1. Accelerate growth in living-wage jobs across a balanced array of industry sectors
2. Improve systems for economic mobility and inclusion
3. Maintain and enhance our high quality of life

The "target sector goals and strategies" defined in the plan are:

4. Sustain and innovate within traditional industry and advanced manufacturing
5. Foster opportunity in technology and entrepreneurship
6. Be a leader in hospitality and place-based tourism
7. Align and cultivate opportunities in craft beverages and food systems
8. Proactively assist growth in education, medicine, and other sciences

Economic Opportunities Analysis (2013)

McMinnville last completed an EOA in 2013, as an update to the 2001/2003 EOA process. Section 6 of the EOA provided discussion and findings for each relevant goal in the Comprehensive Plan for community economic development objectives. Chapter 6 provides updated discussion of these Goals. The 2013 EOA also recommended updates to the list of cluster target industries to include Advanced Manufacturing and Healthcare/Traded Sector Services. A full discussion of these sectors is included in Chapter 4 of this EOA.

Comprehensive Plan (Adopted 1981, and subsequently amended).

McMinnville's Comprehensive Plan consists of three interrelated volumes.

- Volume I – covering background information for the plan process
- Volume II – listing adopted goals and policies
- Volume III – consisting of implementation ordinances and measures including the comprehensive plan and zoning maps, annexation, zoning and land division ordinances, and planned development overlays on areas of special significance

A more detailed statement of economic development goals is embodied by the Comprehensive Plan (Volume II Goals and Policies), Chapter IV – Economy of McMinnville (as amended)

General:

Goal IV 1: To encourage the continued growth and diversification of McMinnville's economy in order to enhance the general well-being of the community and provide employment opportunities for its citizens.

Commercial Development:

Goal IV 2: To encourage the continued growth of McMinnville as the commercial center of Yamhill County in order to provide employment opportunities, goods, and services for the city and county residents.

Goal IV 3: To ensure commercial development that maximizes efficiency of land use through utilization of existing commercially designated lands, through appropriately locating future neighborhood and community serving commercial lands and discouraging strip development.

Goal IV 4: To promote the downtown as a cultural, administrative service, and retail center of McMinnville.

Industrial Development:

Goal IV 5: To continue the growth and diversification of McMinnville's industrial base through the provision of an adequate amount of properly designated lands.

Goal IV 6: To insure industrial development that maximizes efficiency of land uses, that is appropriately located in relation to surrounding land uses, and that meets necessary environmental standards.

Each goal has associated policies and proposals. The Comprehensive Plan includes a series of general, locational and design policies as "more precise and limited statements intended to further define the goals." Also included as part of the Economic Development element of the existing adopted plan are three proposals as "possible courses of action" to further implement the goals and policies.

The 2020 EOA draws on information from numerous data sources, such as the Oregon Employment Department, U.S. Bureau of Economic Analysis, U.S. Bureau of Labor Statistics, and the U.S. Census. In addition to retaining all relevant information from the 2013 EOA, the EOA update also uses information from the Three Mile Lane market analysis, completed in March 2019.

Statewide Planning Guidance

The content of this report is designed to meet the requirements of Oregon Statewide Planning Goal 9 and the administrative rule that implements Goal 9 (OAR 660-009). The analysis in this report is designed to conform to the requirements for an Economic Opportunities Analysis in OAR 660-009 as amended.

1. *Economic Opportunities Analysis (OAR 660-009-0015)*. The Economic Opportunities Analysis (EOA) requires communities to identify the major categories of industrial or other employment uses that could reasonably be expected to locate or expand in the planning area based on information about national, state, regional, county or local trends; identify the number of sites by type reasonably expected to be needed to accommodate projected employment growth based on the site characteristics typical of expected uses; include an inventory of vacant and developed lands within the planning area designated for industrial or other employment use; and estimate the types and amounts of industrial and other employment uses likely to occur in the planning area. Local governments are also encouraged to assess community economic development potential through a visioning or some other public input-based process in conjunction with state agencies.

2. *Industrial and commercial development policies (OAR 660-009-0020)*. Cities are required to develop commercial and industrial development policies based on the EOA. Local comprehensive plans must state the overall objectives for economic development in the planning area and identify categories or particular types of industrial and other employment uses desired by the community. Local comprehensive plans must also include policies that commit the city or county to designate an adequate number of employment sites of suitable sizes, types and locations. The plan must also include policies to provide necessary public facilities and transportation facilities for the planning area.

3. *Designation of lands for industrial and commercial uses (OAR 660-009-0025).* Cities and counties must adopt measures to implement policies adopted pursuant to OAR 660-009-0020. Appropriate implementation measures include amendments to plan and zone map designations, land use regulations, public facility plans, and transportation system plans. More specifically, plans must identify the approximate number, acreage and characteristics of sites needed to accommodate industrial and other employment uses to implement plan policies, and must designate serviceable land suitable to meet identified site needs.

Public Process

At the broadest level, the purpose of the project was to understand how McMinnville's employment has changed since the completion of the 2013 EOA, as well as update the city's employment land needs to align with planning periods used in the 2019 HNA. In 2019, the city adopted an economic development strategy that provided a framework for policies and implementation actions for economic development. The update to the EOA requires a broad range of assumptions that influence the outcomes. Public engagement during the project was accomplished through facilitation of a Project Advisory Committee as described below.[1]

Project Advisory Committee Meetings

The City of McMinnville and ECONorthwest solicited public input from an ad-hoc Project Advisory Committee. The Project Advisory Committee met 5 times[2] to discuss project assumptions, results, and implications. The project relied on the Project Advisory Committee to:

- Review work products, advise on public involvement, and consider public input when making recommendations.
- Advise the project team on matters regarding employment needs and the buildable lands inventory in McMinnville.
- Work collaboratively with, and provide guidance to, the staff and consultant project team in the preparation for the McMinnville Economic Opportunities Analysis.

A public lands work group was also established to review and make recommendation regarding unique land needs associated with employment and land uses for public and institutional organizations.

[1] In addition to Project Advisory Committee meetings, the City of McMinnville also maintained a project website and social media presence.

[2] Project Advisory Committee meeting dates: July 10, 2019; September 5, 2019; October 10, 2019; November 13, 2019; and January 21, 2020.

Organization of this Report

This report is organized as follows:[3]

- **Chapter 2. The McMinnville Economy** – as a review of pertinent population, demographic and economic trends for McMinnville in the context of what is occurring throughout Yamhill County, a larger economic region, statewide and nationally.
- **Chapter 3. National, State & Regional Outlook** – covering recent economic experience and forecasts external to the community that could influence employment uses reasonably expected to locate or expand in the McMinnville UGB over the 5-, 10-, 20-, and 46-year planning horizons of this EOA.
- **Chapter 4. Economic Development Potential** – focused on factors that currently and prospectively affect economic development in McMinnville.
- **Chapter 5. Forecast Employment & Land Needs** – detailing an updated UGB employment forecast together with industrial/commercial buildable lands inventory and determination of long- and short- term needs, parcel size evaluation, site characteristics, and commercial/industrial policy options necessary to provide the land use foundation for the City's economic development strategy.

This report also includes two appendices:

- **Appendix A, Buildable Lands Inventory Methodology**
- **Appendix B, Employment on Other Land and Employment Density**
- **Appendix C, Other Site Needs**
- **Appendix D, Site Need Letters**
- **Appendix E, Public and Institutional Land Need**

[3] The organization of the report is intended to align as closely as possible to the 2013 EOA. Some subsections may differ due to changes in methodology or alternative data sources.

2. The McMinnville Economy

This chapter describes the factors affecting economic growth in McMinnville within the context of national and regional economic trends. The analysis presents the City's competitive advantages for growing and attracting businesses, which forms the basis for identifying potential growth industries in McMinnville.

McMinnville exists within the context of the county, market area, region, state, national, and international context and economies. OAR 660-009-0015 (1) requires a review of national, state, regional, county and local trends.

Regions are defined differently for different purposes. McMinnville exists as part of the economy of the following regions. Also included, as available, are pertinent comparable data for Yamhill County, the state of Oregon and United States.

- 10-County Economic Region. (used for 2013 EOA)
- 7-County Portland MSA (US Census Bureau-defined economically integrated region)
- 6-County North Valley Region (used in 2001/03 EOA, which also used "Willamette valley with three additional counties for some indicators)
- 4-County Mid-Valley Region (defined by the Oregon Employment Department and used in their reporting): Linn, Marion, Polk, Yamhill
- Market Area (relates predominantly to retail trade) (Exhibit 6). Market area will vary depending on the type of attractor. Larger regional shopping may have a larger market areas while neighborhood retail will have a smaller market area).

Employment Trends in McMinnville and Yamhill County

The economy of the nation changed substantially between 1980 and 2018. These changes affected the composition of Oregon's economy, including McMinnville's economy. At the national level, the most striking change was the shift from manufacturing employment to service-sector employment. The most important shift in Oregon during this period has been the shift from a timber-based economy to a more diverse economy, with the greatest employment in services. This section focuses on changes in the economy in Yamhill County since 2001 and in McMinnville since 2007.

Exhibit 7 shows covered employment[4] in Yamhill County for 2001 and 2018. Employment increased by 8,202 jobs, or 29%, over this period, which included the Great Recession and subsequent recovery. The sectors with the largest increases in numbers of employees were Arts, entertainment, and recreation; Healthcare and social assistance; Other services; Accommodation and food services; and Professional and business services.

The average wage for employment in Yamhill County in 2018 was about $42,321. Employment in higher wage industries, such as Information and Transportation, Warehousing, and Utilities, decreased by 204 jobs over the 2001 to 2018 time period.

Exhibit 7. Covered Employment by Industry, Yamhill County, 2001-2018

Sector	2001	2018	Change 2001 to 2018		
			Difference	Percent	AAGR

Exhibit 8 shows covered employment and average wage for the 10 largest employment industries in Yamhill County in 2018. Jobs in manufacturing account for about 19% of the

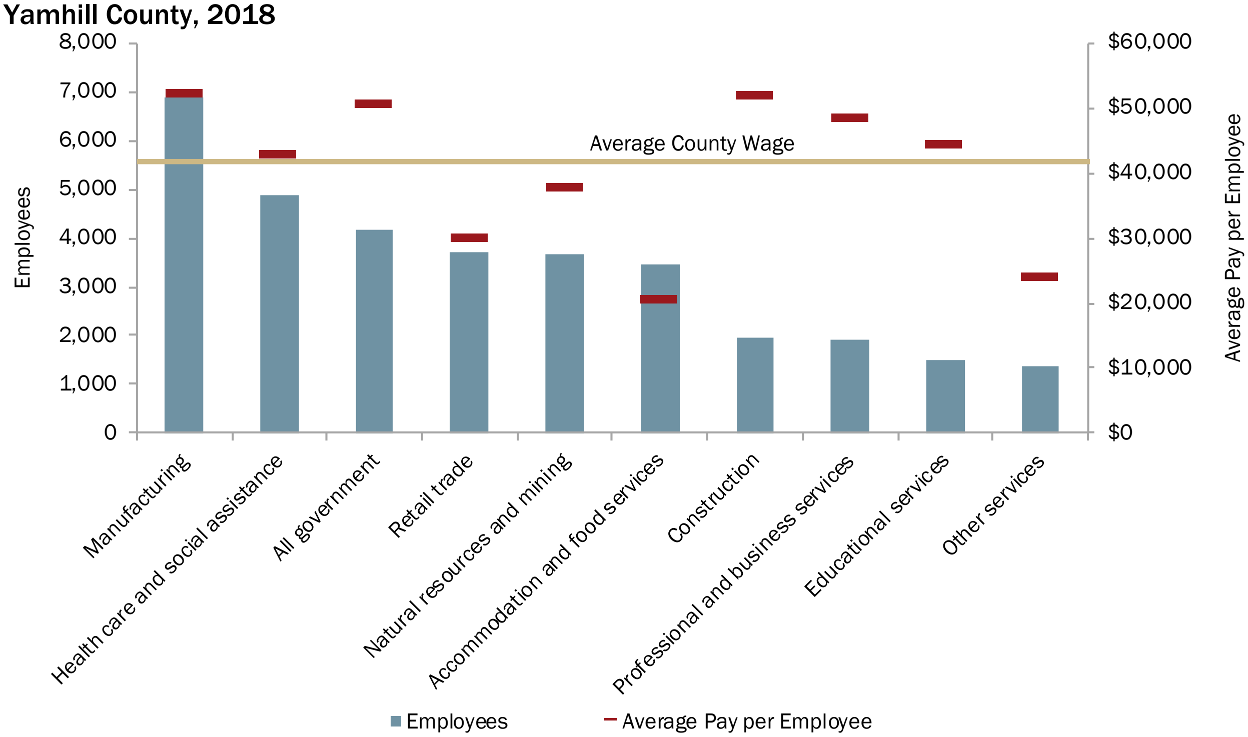
[4] **Covered** employment includes employees covered by unemployment insurance. Examples of workers not included in covered employment are sole proprietors, some types of contractors (often referred to as "1099 employees"), or some railroad workers. Covered employment data is from the Oregon Employment Department.

county's covered employment and these jobs pay approximately 24% more than the county average wage ($52,303 compared to $42,321). Healthcare and social assistance jobs are the next largest employment sector, making up about 13% of Yamhill County's covered employment. Wages in this industry are closer to the county average, paying employees an average of $42,952. Government jobs account for 12% of the county's covered employment. These jobs pay roughly 20% more than the county average ($50,765 compared to $42,321).

Though not shown in Exhibit 8 due to relatively low employment levels, wholesale trade, on average, pays employees $62,411, 47% above the county average wage. This sector only makes up about 2% of Yamhill County's total covered employment, though it pays the highest wages.

Additionally, jobs in construction ($51,947), professional and business services ($48,497), and educational services ($44,398), pay more per year than the county average. However, these three sectors make up a smaller employment base than Retail trade, Natural resources and mining, and Accommodation and food services, which pay below the average county wage.

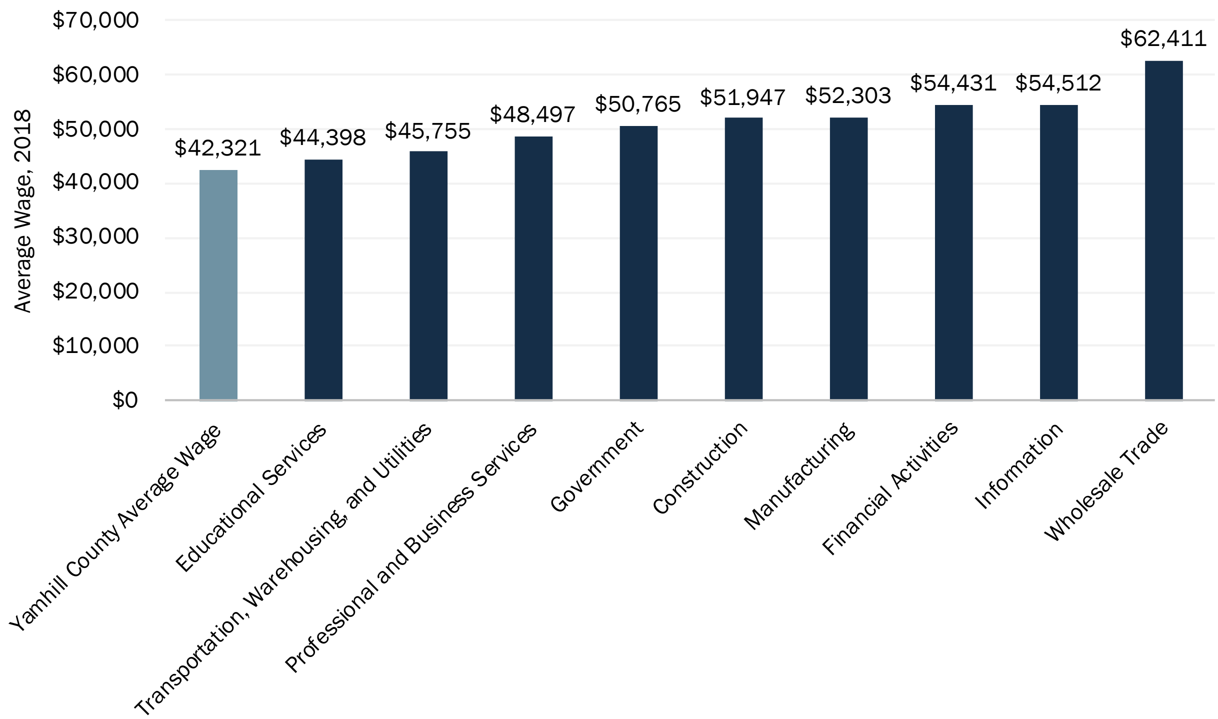
Exhibit 8. Covered Employment and Average Pay by Sector, 10 Largest Employment Sectors Yamhill County, 2018



Source: Bureau of Labor Statistics, Quarterly Census of Employment and Wages, 2018.

Exhibit 9 shows the sectors in Yamhill County that pay an annual average wage above the countywide average wage. Some of these sectors, such as wholesale trade and construction, are shown in Exhibit 8; however, other higher paying sectors include information ($54,512), financial activities ($54,431), and manufacturing ($52,303).

Exhibit 9. Highest Paying Sectors in Yamhill County, 2018



Source: Bureau of Labor Statistics, Quarterly Census of Employment and Wages, 2018.

Between 2007 and 2017, employment in McMinnville increased by about 1,123 employees (8%) at an annual average growth rate of 0.8%. Employment in Accommodation and food services and Retail trade increased by 372 employees and 309 employees respectively, while employment in Transportation and warehousing and Utilities decreased by about 229 (Exhibit 10).

Exhibit 11 shows a summary of covered employment data for the McMinnville UGB in 2017. The sectors with the greatest number of employees were Health care and social assistance and Private education (21%); Manufacturing (15%); and Retail trade (15%). Exhibit 12 shows employment in McMinnville in 2017 for detailed industries in the manufacturing sector. Employment in Food manufacturing and Beverage and tobacco product manufacturing accounted for about one quarter of McMinnville's manufacturing employment overall.

Exhibit 11. Covered Employment and Average Pay by Sector, McMinnville UGB, 2017

The average size for a private business in McMinnville is 12 employees per business, compared to the State average of 11 employees per private business. Businesses with 50 or fewer employees account for 55% of private employment and 10 or fewer account for 19% of private employment. Exhibit 13 shows the distribution of establishments by size class (i.e., number of employees). Over 75% of the private (i.e., non-government) establishments are businesses with fewer than 10 employees.

Exhibit 13. Covered Private Employment by Size Class, McMinnville UGB, 2017

Establishment size (number of employees)	Number of establishments
0 to 4	682
5 to 9	211
10 to 19	141
20 to 49	87
50 to 99	27
100+	18
Total	**1,166**

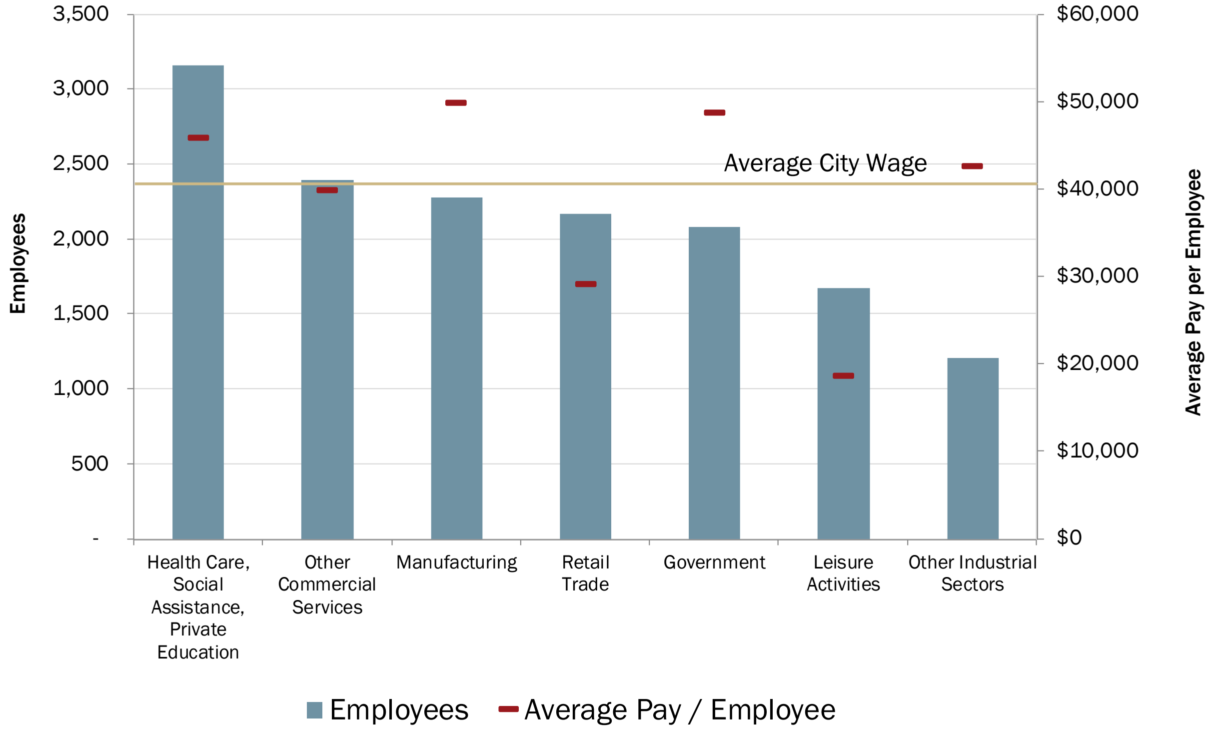
Exhibit 14 shows the employment and average pay per employee for sectors in McMinnville. Average pay for all employees ($40,105) is shown as a light brown line across the graph and average pay for individual sectors as short red lines. The figure shows that Health care, social assistance, and Private education; Manufacturing; Government; and Other industrial sectors had above average wages. The lowest wages were in Retail trade and Leisure activities, which includes arts, entertainment, and recreation and accommodation and food services.

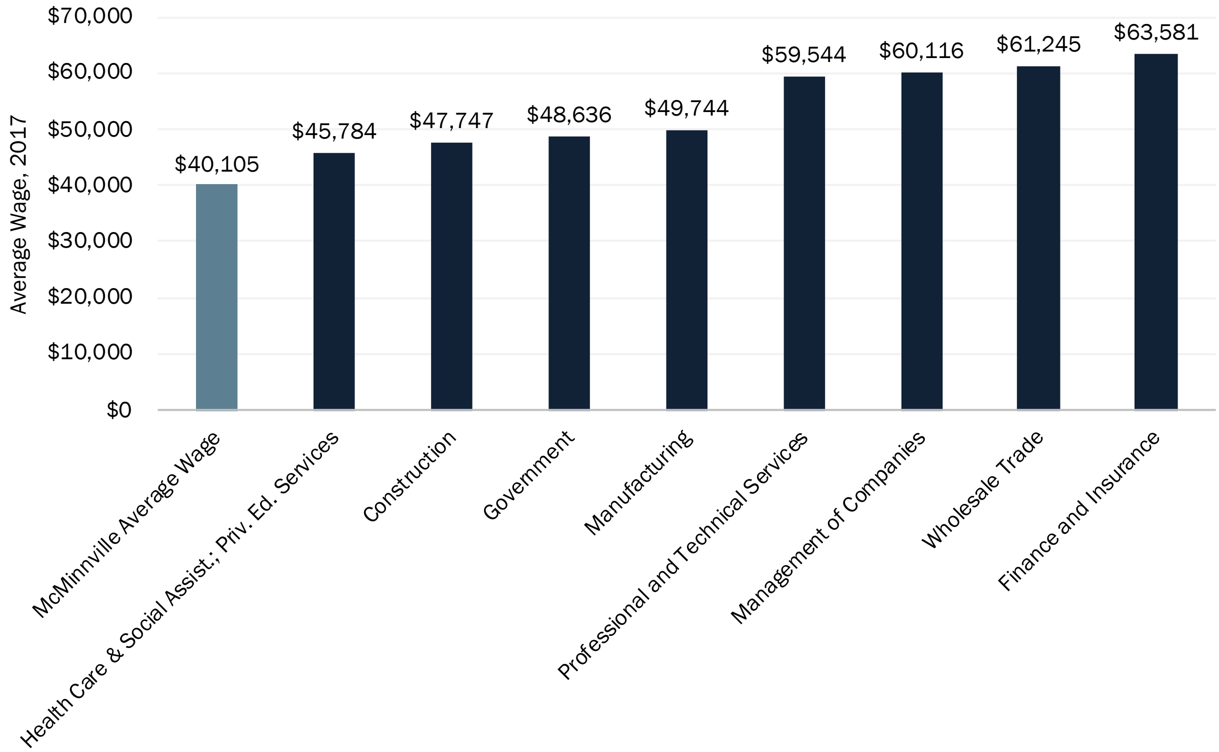
Exhibit 14. Covered Employment and Average Pay by Sector, McMinnville UGB, 2017



Source: Oregon Employment Department, Quarterly Census of Employment and Wages, 2017.

Exhibit 15 shows the sectors with average annual wages that exceed the McMinnville City average. The three highest paying sectors, finance and insurance, wholesale trade, and management of companies, all paid over $60,000 in 2017. Other higher paying sectors include professional and technical services, manufacturing, government, and construction.

Exhibit 15. Highest Paying Sectors Exceeding Average Wage in McMinnville UGB, 2017



Source: Oregon Employment Department, Quarterly Census of Employment and Wages, 2017.

Outlook for growth in Yamhill County

Exhibit 16 shows the Oregon Employment Department's forecast for employment growth by industry for the Mid-Valley Region (Linn, Marion, Polk, and Yamhill Counties) over the 2017 to 2027 period. Employment in the region is forecasted to grow at an average annual growth rate of 1.1%.

The sectors that will lead employment in the region for the 10-year period are: Private educational and health services (adding 8,100 jobs), Trade, transportation, and utilities (5,100), Government (3,500), Construction (3,000), Leisure and hospitality (3,000), and Manufacturing and Natural resources and mining (2,400 each). In sum, these sectors are expected to add 27,500 new jobs or about 88% of employment growth in the Mid-Valley Region. Yamhill County accounts for about 14% of employment in these four counties, and McMinnville accounts for about 42% of the County's employment.

Exhibit 16. Regional Employment Projections, 2017-2027, Mid-Valley Region (Linn, Marion, Polk, and Yamhill Counties)

Industry Sector	2017	2027	Change 2017 - 2027		
			Number	Percent	AAGR

3. National, State, and Regional Outlook

Consistent with Oregon Administrative Rules (OAR 660), McMinnville's Economic Opportunities Analysis is set within the context of broader nationwide, state, and regional trends. Recent trends and conditions at a national and state level are considered first, followed by detailed information at a regional and local level.

National Trends

Economic development in McMinnville over the next 20 years will occur in the context of long-run national trends. The most important of these trends include:

- **Economic growth will continue at a moderate pace**. Analysis from the Congressional Budget Office (CBO) estimates after the 3.1% real GDP growth in 2018, real GDP will grow by approximately 2.3% in 2019. After 2019, the CBO forecasts the annual average growth of real GDP to slow and stabilize around 1.7% across the 2020 to 2029 period. The primary reason they provide for this slowing growth is that they expect the labor force to grow at a slower rate than historical trends.[5]

  The unemployment rate is forecasted to decrease to 3.5% in the second-half of 2019, which is the rate's lowest point since the 1960s. After this year, the CBO predicts the unemployment rate will rise between 2020 and 2023 due to slower growth in economic output.[6]

- **The aging of the Baby Boomer generation, accompanied by increases in life expectancy.** As the Baby Boomer generation continues to retire, the number of Social Security recipients is expected to increase from 62.5 million in 2018 to over 87.0 million in 2040, a 39% increase. However, due to lower-birth rate replacement generations, the number of covered workers is only expected to increase 12% over the same time period, from 176.0 million to 196.4 million in 2040. Currently, there are 35 Social Security beneficiaries per 100 covered workers in 2018 but by 2040 there will be 44 beneficiaries per 100 covered workers. This will increase the percent of the federal budget dedicated to Social Security and Medicare.[7]

  Baby Boomers are expecting to work longer than previous generations. An increasing proportion of people in their early- to mid-50s expect to work full-time after age 65. In 2004, about 40% of these workers expect to work full-time after age 65, compared with

---

[5] Congressional Budget Office. *The Budget and Economic Outlook: 2019 to 2029. January 2019*. Retrieved from: https://www.cbo.gov/system/files/2019-03/54918-Outlook-3.pdf.

[6] *Ibid*.

[7] The Board of Trustees, Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds, *The 2019 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds*, April 25, 2019. Retrieved from: https://www.ssa.gov/OACT/TR/2019/tr2019.pdf.

about 30% in 1992.[8] This trend can be seen in Oregon, where the share of workers 65 years and older grew from 2.9% of the workforce in 2000 to 4.1% of the workforce in 2010. In 2017, this share reached 5.5%. Over the same eighteen-year period, the share of workers 45 to 64 years increased from 35% of all employed Oregonians in 2000 to 37% in 2017.[9]

- **Need for replacement workers.** The need for workers to replace retiring Baby Boomers will outpace job growth. According to the Bureau of Labor Statistics, total employment in the United States will grow by about 11.5 million jobs over 2016 to 2026. Annually, they estimate there will be 18.7 million occupational openings over the same period. This exhibits the need for employees over the next decade as the quantity of openings per year is large relative to expected employment growth. About 71% of annual job openings are in occupations that do not require postsecondary education.[10]

- **The importance of education as a determinant of wages and household income.** According to the Bureau of Labor Statistics, a majority of the fastest growing occupations will require an academic degree, and on average, they will yield higher incomes than occupations that do not require an academic degree. The fastest-growing occupations requiring an academic degree will be registered nurses, software developers, general and operations managers, accountants and auditors, market research analysts and marketing specialists, and management analysts. Occupations that do not require an academic degree (e.g., retail sales person, food preparation workers, and home care aides) will grow, accounting for approximately 71% of all new jobs by 2026. These occupations typically have lower pay than occupations requiring an academic degree.[11]

  The national median income for people over the age of 25 in 2018 was about $48,464. Workers without a high school diploma earned $19,708 less than the median income, and workers with a high school diploma earned $10,504 less than the median income. Workers with some college earned $6,760 less than median income, and workers with a bachelor's degree earned $13,832 more than median. Workers in Oregon experience the same patterns as the nation but pay is generally lower in Oregon than the national average.[12]

- **Increases in labor productivity.** Productivity, as measured by output per hour of labor input, increased in most sectors between 2000 and 2010, peaking in 2007. However, productivity increases were interrupted by the recession. After productivity decreases from 2007 to 2009, many industries saw large productivity increases from 2009 to 2010.

[8] "The Health and Retirement Study," 2007, National Institute of Aging, National Institutes of Health, U.S. Department of Health and Human Services.

[9] Analysis of 2000 Decennial Census data, 2010 U.S. Census American Community Survey, 1-Year Estimates, and 2017 U.S. Census American Community Survey, 1-Year Estimates, for the table Sex by Age by Employment Status for the Population 16 Years and Over.

[10] "Occupational Employment Projections to 2016-2026," Bureau of Labor Statistics, 2018.

[11] "Occupational Employment Projections to 2016-2026," Bureau of Labor Statistics, 2018.

[12] Bureau of Labor Statistics, Employment Projections, March 2019. http://www.bls.gov/emp/epchart001.htm.

Industries with the fastest productivity growth were Information Technology-related industries. These include wireless telecommunications carriers, computer and peripheral equipment manufacturing, electronics and appliance stores, and commercial equipment manufacturing wholesalers.[13]

Since the end of the recession (2010), labor productivity has increased across a handful of large sectors but has also decreased in others. In wholesale trade, productivity—measured in output per hour—increased by 19% over 2009 to 2017. Retail trade gained even more productivity over this period at 25%. Food services, however, have remained stagnant since 2009, fluctuating over the nine-year period and shrinking by 0.01% over this time frame. Additionally, the Bureau of Labor Statistics reports multifactor productivity in manufacturing has been slowing down 0.3% per year over the 2004 to 2016 period. Much of this, they note, is due to slowdown in semiconductors, other electrical component manufacturing, and computer and peripheral equipment manufacturing.[14]

- **The importance of entrepreneurship and growth in small businesses.** According to the U.S. Small Business Office of Advocacy, small businesses are those that have fewer than 500 employees. However, the Oregon Office of Small Business Advocacy defines small businesses as those with fewer than 100 employees. For consistency in our small business data comparisons, we will maintain the definition of small businesses to be those with fewer than 100 employees.

  The U.S. Census Bureau's Statistics of U.S. Businesses (SUSB) shows in 2016 that about 98% of all firms in the United States had fewer than 100 employees. Their employees accounted for approximately 33% of American workers.[15] The National League of Cities suggests ways that local governments can attract entrepreneurs and increase the number of small businesses including strong leadership from elected officials; better communication with entrepreneurs, especially about the regulatory environment for businesses in the community; and partnerships with colleges, universities, small business development centers, mentorship programs, community groups, businesses groups, and financial institutions.[16]

- **Increases in automation across sectors.** Automation is a long-running trend in employment, with increases in automation (and corresponding increases in productivity) over the last century and longer. The pace of automation is increasing, and the types of jobs likely to be automated over the next 20 years (or longer) is broadening.

[15] U.S. Census Bureau, Statistics of U.S. Businesses. Data by Enterprise Employment Size, 2016. Retrieved from: https://www.census.gov/data/tables/2016/econ/susb/2016-susb-annual.html

[16] National League of Cities "Supporting Entrepreneurs and Small Businesses" (2012). https://www.nlc.org/supporting-entrepreneurs-and-small-business.

Lower paying jobs are more likely to be automated, with potential for automation of more than 80% of jobs paying less than $20 per hour over the next 20 years. About 30% of jobs paying $20 to $40 per hour and 4% of jobs paying $40 or more are at risk of being automated over the next 20 years.[17]

Low- to middle-skilled jobs that require interpersonal interaction, flexibility, adaptability, and problem solving will likely persist into the future as will occupations in technologically lagging sectors (e.g. production of restaurant meals, cleaning services, hair care, security/protective services, and personal fitness).[18] This includes occupations such as (1) recreational therapists, (2) first-line supervisors of mechanics, installers, and repairers, (3) emergency management directors, (4) mental health and substance abuse social workers, (5) audiologists, (6) occupational therapists, (7) orthotists and prosthetists, (8) healthcare social workers, (9) oral and maxillofacial surgeons, and (10) first-line supervisors of firefighting and prevention workers. Occupations in the service and agricultural or manufacturing industry are most at-risk of automation because of the manual-task nature of the work.[19,20,21] This includes occupations such as (1) telemarketers, (2) title examiners, abstractors, and searchers, (3) hand sewers, (4) mathematical technicians, (5) insurance underwriters, (6) watch repairers, (7) cargo and freight agents, (8) tax preparers, (9) photographic process workers and processing machine operators, and (10) accounts clerks.[22]

- **Transformation of retail.** Historical shift in retail businesses, starting in the early 1960s, was the movement from one-off, 'mom and pop shops' toward superstores and the clustering of retail into centers or hubs. Notably, we still see this trend persist; for example, in 1997, the 50 largest retail firms accounted for about 26% of retail sales and by 2007, they accounted for about 33%.[23] The more recent shift began in the late 1990s, where technological advances have provided consumers the option to buy goods through e-commerce channels. The trend toward e-commerce has become increasingly preferential to millennials and Generation X, who are easier to reach online and are more responsive to digital ads than older generations.[24] Since 2000, e-commerce sales

[24] Pew Research Center (2010b). Generations 2010. Retrieved Online at: http://www.pewinternet.org/Reports/2010/Generations-2010.aspx

grew from 0.9% of total retail sales to 9.7% (2018). Over 2000 to 2018, e-commerce retail sales have grown at a rate 18% per year.[25] It is reasonable to expect this trend to continue. While it is unclear what impact e-commerce will have on employment and brick and mortar retail, it seems probable that e-commerce sales will continue to grow, shifting business away from some types of retail. Over the next decades, communities must begin considering how to redevelop and reuse retail buildings in shopping centers, along corridors, and in urban centers.

The types of retail and related services that remain will likely be sales of goods that people prefer to purchase in person or that are difficult to ship and return (e.g., large furniture), specialty goods, groceries and personal goods that maybe needed immediately, restaurants, and experiences (e.g., entertainment or social experiences). According to the Urban Land Institute, in the post-disruption era of retail, new trends in this sector are beginning to emerge. These changes include the convergence of technology and shopping, as businesses focus on brand awareness and customer engagement via digital channels in the physical retail space.[26]

In addition to dynamics with e-commerce, other factors influencing changes in retail include the growth of big box stores, income inequality, and changing preferences. The New York Times reported that while Amazon had $38 billion in sales between 2000 and 2013, Costco had about $50 billion and Sam's Club had about $32 billion.[27] The other factors influencing traditional retail—income inequality and emphasis on services over goods—result in either less consumer spending overall or changes in preferences of consumers who increasingly spend more on services or experiences.

This shift in the retail industry is also described in the *Three-Mile Lane Area Plan: Market Analysis*, which documents proactive steps to adapt to the changing retail landscape by "commissioning studies of the marketplace and developing new strategies to maintain and foster better retail environments."[28] It specifically describes the difference between "experiential consumerism" and other types of retail that are more likely to directly compete with e-commerce. Examples of "experiential consumerism" include dining, grocery, health and fitness clubs, etc.[29] These types of retail are typically located on main streets and neighborhood or commercial centers.

- **The importance of high-quality natural resources.** The relationship between natural resources and local economies has changed as the economy has shifted away from resource extraction. High-quality natural resources continue to be important in some

states, especially in the Western U.S. Increases in the population and in households' incomes, plus changes in tastes and preferences have dramatically increased demands for outdoor recreation, scenic vistas, clean water, and other resource-related amenities. Such amenities contribute to a region's quality of life and play an important role in attracting both households and firms.[30]

- **Continued increase in demand for energy.** Energy prices are forecasted to increase over the planning period. While energy use per capita is expected to decrease through 2050, total energy consumption will increase with rising population. Energy consumption is expected to grow primarily from industrial (0.7%) and, to a lesser extent, commercial users (0.2%). Residential and transportation consumption are forecasted to decrease (-0.2% for both). This decrease in energy consumption for transportation is primarily due to increased federal standards and increased technology for energy efficiency in vehicles. The unspecified sector, which is made up of consumption not attributed to residential, commercial, industrial, or transportation, is forecasted to increase consumption by 1.4% through 2050. Going forward through the projection period, potential changes in federal laws (such as decreases in car emissions) leave energy demand somewhat uncertain.

  Energy consumption by type of fuel is expected to change over the planning period. By 2050, the U.S. will continue to shift from crude oil towards natural gas and renewables. For example, from 2018 to 2050, the Energy Information Administration projects that U.S. energy consumption of motor gasoline will average a 0.9% annual decrease, while consumption of renewable sources will grow at 1.6% per year and natural gases liquefied for exporting will grow 5.0% per year through 2050. With increases in energy efficiency, strong domestic production of energy, and relatively flat demand for energy by some industries, the U.S. will be able to be a net exporter of energy over the 2018 to 2050 period. Demand for electricity is expected to increase 0.2% per year annually over 2018 to 2050 as the population grows and economic activity increases.[31]

- **Impact of rising energy prices on commuting patterns.** As energy prices increase over the planning period, energy consumption for transportation will decrease. These increasing energy prices may decrease willingness to commute long distances, though with expected increases in fuel economy, it could be that people commute further while consuming less energy.[32] Over 2018 to 2038, the U.S. Energy Information Administration estimates in its forecast that the decline in transportation energy consumption is a result

of increasing fuel economy offsetting the total growth in vehicle miles traveled (VMT). VMT for passenger vehicles is forecasted to increase through 2050.

- **Potential impacts of global climate change.** The consensus among the scientific community that global climate change is occurring expounds important ecological, social, and economic consequences over the next decades and beyond.[33] Extensive research shows that Oregon and other western states already have experienced noticeable changes in climate and predicts that more change will occur in the future.[34]

  In the Pacific Northwest, climate change is likely to (1) increase average annual temperatures, (2) increase the number and duration of heat waves, (3) increase the amount of precipitation falling as rain during the year, (4) increase the intensity of rainfall events, and 5) increase sea level. These changes are also likely to reduce winter snowpack and shift the timing of spring runoff earlier in the year.[35]

  These anticipated changes point toward some of the ways that climate change is likely to impact ecological systems and the goods and services they provide. There is considerable uncertainty about how long it would take for some of the impacts to materialize and the magnitude of the associated economic consequences. Assuming climate change proceeds as today's models predict, however, some of the potential economic impacts of climate change in the Pacific Northwest will likely include:[36]

[36] The issue of global climate change is complex and there is a substantial amount of uncertainty about climate change. This discussion is not intended to describe all potential impacts of climate change but to present a few ways that climate change may impact the economy of cities in Oregon and the Pacific Northwest.

- *Potential impact on agriculture and forestry.* Climate change may impact Oregon's agriculture through changes in growing season, temperature ranges, and water availability.[37] Climate change may impact Oregon's forestry through an increase in wildfires, a decrease in the rate of tree growth, a change in the mix of tree species, and increases in disease and pests that damage trees.[38]
- *Potential impact on tourism and recreation.* Impacts on tourism and recreation may range from (1) decreases in snow-based recreation if snow-pack in the Cascades decreases, (2) negative impacts to tourism along the Oregon Coast as a result of damage and beach erosion from rising sea levels,[39] (3) negative impacts on availability of water summer river recreation (e.g., river rafting or sports fishing) as a result of lower summer river flows, and (4) negative impacts on the availability of water for domestic and business uses.

Short-term national trends will also affect economic growth in the region, but these trends are difficult to predict. At times, these trends may run counter to the long-term trends described above. A recent example is the downturn in economic activity in 2008 and 2009 following declines in the housing market and the mortgage banking crisis. The result of the economic downturn was decreases in employment related to the housing market, such as construction and real estate. As these industries recover, they will continue to play a significant role in the national, state, and local economy over the long run. This report takes a long-run perspective on economic conditions (as the Goal 9 requirements intend) and does not attempt to predict the impacts of short-run national business cycles on employment or economic activity.

State Trends

Short-Term Trends

According to the Oregon Office of Economic Analysis (OEA), the Oregon economy "is on firmer ground today following a rocky start to the year…." They emphasize, however, that the economy continues to strike the "sweet spot" despite a rocky start to 2019.[40] The OEA also reports that although the Oregon economy has been slowing down over the last couple of years and is not outpacing the nation any longer, its "growth is strong enough to keep up with a growing population but also deliver economic and income gains to Oregonians."[41]

[41] *Ibid*, page 2.

Wages in Oregon continue to remain below the national average, but they continue to rise and remain strong, staying at their highest point relative to the state's mill closures in the 1980s.[42] By the end of 2019, the OEA forecasts 39,800 jobs will be added to Oregon's economy. This is an approximate 2.1% annual growth in total nonfarm employment relative to 2018 levels.[43] The health services, professional and business services, leisure and hospitality, retail trade, and manufacturing industries are forecasted to account for well over half of the total job growth in Oregon for 2019. Oregon continues to have an advantage in job growth compared to other states, due to its industrial sector and in-migration flow of young workers in search of jobs.

The housing market continues to recover as Oregon's economy improves, though new supply is not keeping up with demand. As a result, prices continue to rise to considerable levels and the OEA reports housing "(in)affordability is becoming a larger risk" to Oregon's economic outlook.[44] Oregon is seeing an increase in household formation rates, which is good for the housing market as this will "help drive up demand for new houses."[45] Though younger Oregonians are tending to live at home with their parents longer, the aging Millennial generation (from their early 20s to mid-to-late 30s) and the state's increase in migration will drive demand for homes in the coming years. Housing starts in 2019 are on track to reach 20,600 units and in 2020, starts are expected to increase to 21,800. Beyond 2020, the OEA forecasts an average growth of 24,000 units per year to satisfy the demand for Oregon's growing population and to make up for the under development of housing post-recession.[46]

The Oregon Index of Leading Indicators (OILI) continues to grow quite rapidly in 2019 despite a decrease in 2018. The leading indicators showing improvement are: air freight, consumer sentiment, and withholding. Indicators that are slowing down include: help wanted ads, housing permits, industrial production, initial claims, the manufacturing purchasing managers index (PMI), new incorporations, and the Oregon Dollar Index. The one indicator not improving at this point in time is semiconductor billings. Relative to their September 2018 forecast, many economic indicators in their May 2019 forecast have changed from *improving* to *slowing*, which further illustrates the slowing down of Oregon's economy after several years of extended growth.[47]

Oregon's economic health is dependent on export markets. The value of Oregon exports in 2018 was $22.3 billion, a 2% growth from 2017. In 2018, Oregon's exports made up approximately 9.4% of its total 2018 GDP.[48] The countries that Oregon exports the most to are China (21.4% of total Oregon exports), Canada (14.4%), Japan (9.8%), South Korea (7.6%), Malaysia (6.6%), and

Vietnam (5.0%).[49] With the escalating trade war occurring overseas, specifically with China, Oregon exports are left potentially vulnerable, as China is a top destination for Oregon exports.[50] The OEA notes that it is too soon to assess the disruptiveness of the trade war on global supply chains, however, developments will be tracked as it continues. An economic slowdown across many parts of Asia will have a spillover effect on the Oregon economy.

Long-term Trends

State, regional, and local trends will also affect economic development in McMinnville over the next 20 years. The most important of these trends includes: continued in-migration from other states, distribution of population and employment across the state, and change in the types of industries in Oregon.

- **Continued in-migration from other states.** Oregon will continue to experience in-migration (more people moving *to* Oregon than *from* Oregon) from other states, especially California and Washington. From 1990 to 2018, Oregon's population increased by about 1.35 million, 69% of which was from people moving into Oregon (net migration). The average annual increase in population from net migration over the same time period was approximately 32,000 persons. During the early- to mid-1990's, Oregon's net migration was highest, reaching over 60,000 in 1991, with another relatively high peak of 57,100 persons in 2017. Oregon has not seen negative net migration since the early- to mid-1980's.[51]
- **Forecast of job growth.** Total nonfarm employment is expected to increase from 1.95 million in 2019 to 2.04 million in 2022, an increase of 88,000 jobs. The industries with the largest growth are forecasted to be Government, Health Services, Professional and Business Services, Leisure and Hospitality, and Retail, accounting for 89% of employment growth.[52]
- **Continued importance of manufacturing to Oregon's economy.** Oregon's exports totaled $19.4 billion in 2008, nearly doubling since 2000, and reached $22.3 billion in 2018. The majority of Oregon exports go to countries along the Pacific Rim, with China, Canada, Japan, South Korea, Malaysia, and Vietnam as top destinations. Oregon's largest exports are tied to high tech and mining, as well as agricultural products.[53]

Manufacturing employment is concentrated in five counties in the Willamette Valley or Portland area: Washington, Multnomah, Lane, Clackamas, and Marion Counties.[54]

- **Shift in manufacturing from natural resource-based to high-tech and other manufacturing industries.** Since 1970, Oregon started to transition away from reliance on traditional resource-extraction industries. A significant indicator of this transition is the shift within Oregon's manufacturing sector, with a decline in the level of employment in the Lumber & Wood Products industry and concurrent growth of employment in other manufacturing industries, such as high-technology manufacturing (Industrial Machinery, Electronic Equipment, and Instruments), Transportation Equipment manufacturing, and Printing and Publishing.[55]
- **Income.** Oregon's income and wages are below that of a typical state. However, Oregon wages continue to grow and remain strong, and they are at their highest point relative to the mill closures resulting from the early 1980's recession. In 2018, the average annual wage in Oregon was $53,058, and in 2017, the median household income in Oregon was $60,212 (compared to national average wages of $57,265 in 2018, and national household income of $60,336 in 2017).[56] Total personal income (all classes of income, minus Social Security contributions, adjusted for inflation) in Oregon is expected to increase by 22%, from $219.5 billion in 2019 to $267.6 billion in 2023.[57] Per capita income is expected to increase by 16% over the same time period, from $51,700 (thousands of dollars) in 2019 to $60,200 in 2023 (in nominal dollars).[58]
- **Small businesses continue to account for a large share of employment in Oregon**. While small firms played a large part in Oregon's expansion between 2003 and 2007, they also suffered disproportionately in the recession and its aftermath (64% of the net jobs lost between 2008 and 2010 was from small businesses).

  In 2016, small businesses (those with 100 or fewer employees) accounted for 95% of privately-owned businesses in Oregon. Said differently, most businesses in Oregon are small (in fact, 76% of all businesses have fewer than 10 employees), but the largest share of Oregon's employees work for medium-to-large businesses (those with 100 or more employees).[59]

---

[54] Oregon Employment Department. *Employment and Wages by Industry (QCEW)*. 2018 Geographic Profile, Manufacturing (31-33). Retrieved from: qualityinfo.org.

[55] Although Oregon's economy has diversified since the 1970's, natural resource-based manufacturing accounts for about 37% of employment in manufacturing in Oregon in 2018, with the most employment in Food Manufacturing (29,900) and Wood Product Manufacturing (23,400) (QCEW).

[56] Average annual wages are for "Total, all industries," which includes private and public employers. Oregon Quarterly Census of Employment and Wages, 2018. Retrieved from: https://www.qualityinfo.org; Bureau of Labor Statistics, Quarterly Census of Employment and Wages, 2017; Total, U.S. Census American Community Survey 1-Year Estimates, 2017, Table B19013.

[57] Office of Economic Analysis. Oregon Economic and Revenue Forecast, May 2019. Vol. XXXIX, No. 2, page 36.

[58] *Ibid*, page 36.

[59] U.S. Census Bureau, 2016 Statistics of U.S. Businesses, Annual Data, Enterprise Employment Size, U.S and States.

The average annualized payroll per employee for small businesses was $37,958 in 2016, which is considerably less than that for large businesses ($57,488) and the statewide average for all businesses ($47,746).[60] Younger workers are important to continue growth of small businesses across the nation. More than one-third of Millennials (those born between 1980 - 1999) are self-employed, with approximately half to two-thirds interested in becoming an entrepreneur. Furthermore, in 2011, about 160,000 startup companies were created each month; 29% of these companies were founded by people between 20 to 34 years of age.[61] According to the Kauffman Indicators of Entrepreneurship, in 2018, about 79% of startups nationwide were still active after one year. On average, startups nationwide created approximately 5.2 jobs in their first year (when normalized by population).[62] However, it is typically the case that startups are important for job creation on a longer time horizon, well beyond their first year, as "fewer than half of all startups in America are still in business after five years."[63]

- **Entrepreneurship in Oregon.** The creation of new businesses is vital to Oregon's economy as their formations generate new jobs and advance new ideas and innovations into markets. They also can produce more efficient products and services to better serve local communities. The Kauffman Foundation reports several statistics at the state level related to entrepreneurship. They report: the rate of new entrepreneurs, the opportunity share of new entrepreneurs (new entrepreneurs who created a business by choice instead of necessity), startup early job creation (the average number of jobs created by startups in their first year, normalized by population), and startup early survival rate (the percent of startups that are still active after one year).

  According to Kauffman's indicators, Oregon's opportunity share of new entrepreneurs is at its highest relative point post-recession, reaching approximately 80% in 2017, up from its post-recession low of 71% in 2012. Startup early job creation also continues to increase. In 2017, the average number of jobs created by startups in their first year reached 5.24, which is comparable to the national average of 5.27. Relative to Oregon's post-recession low of 3.80 in 2010, the average number of startup jobs have increased approximately 38%. However, the two remaining entrepreneurial indicators, the rate of new entrepreneurs and startup early survival rate, are declining somewhat in Oregon. In 2017, the rate of new entrepreneurs decreased by 0.02 percentage points, from 0.34% in 2016 to 0.32% in 2017, though Oregon's 2017 rate aligns closely with the national average of 0.33%. For Oregon's startup early survival rate, it declined to 78.4% in 2017 from a post-recession peak of 80.1% in 2015. Though this decline is not substantially large, the downward trend suggests startups, on average, are not persisting as well as they used to

[63] Nish Acharya. "Small Business Are Having A Bigger Impact on Job Creation Than Large Corporations." Forbes, May 5, 2019. https://www.forbes.com/sites/nishacharya/2019/05/05/who-is-creating-jobs-in-america/#5c74c156597d

relative to two years ago. Oregon's startup early survival rate in 2017 is 1.4 percentage points below the national average of 79.8%.[64]ß

Moreover, in 2018, the Oregon OEA reports new business applications in Oregon are increasing. They do, however, simultaneously note startup businesses "are a smaller share of all firms than in the past."[65] Though this measurement of economic activity does not constitute a full understanding of how well entrepreneurship is performing, it does provide an encouraging signal.

Regional and Local Trends

Throughout this section and the report, McMinnville is compared to Yamhill County and the State of Oregon. These comparisons are to provide context for changes in McMinnville's socioeconomic characteristics.

Availability of Labor

The availability of trained workers in McMinnville will impact development of its economy over the planning period. A skilled and educated populace can attract well-paying businesses and employers and spur the benefits that follow from a growing economy. Key trends that will affect the workforce in McMinnville over the next 20 years include its growth in its overall population, growth in the senior population, and commuting trends.

Growing Population

Population growth in Oregon tends to follow economic cycles. Oregon's population grew from 2.8 million people in 1990 to nearly 4.2 million people in 2018, an increase of over 1,350,000 people at an average annual growth rate of 1.4%. Oregon's growth rate slowed to 1.1% annual growth between 2000 and 2018.

McMinnville's population increased by 15,916 residents over 1990 to 2018, nearly doubling in size. This growth is reflected in its average annual growth rate (AAGR) of 2.3% (and notably, the growth rate used for the 2000-2020 period in the 2002 McMinnville Housing Needs Analysis), which is 0.9 percentage points higher than the State's rate of 1.4%. Similar to McMinnville, Yamhill County's population grew more rapidly than the State, averaging 1.8% growth year-over-year. The County added 41,864 residents over 1990 to 2018 and McMinnville accounts for about 38% of this growth.

Exhibit 17. Population Growth, McMinnville, Yamhill County, and Oregon, 1990 – 2018

Geography					Change, 1990 - 2018		
	1990	2000	2010	2018	Number	Percent	AAGR
McMinnville	17,894	26,499	32,930	33,810	15,916	89%	2.3%
Yamhill County	65,551	84,992	95,925	107,415	41,864	64%	1.8%
Oregon	2,842,337	3,421,399	3,844,195	4,195,300	1,352,963	48%	1.4%

Source: U.S. Census Bureau, 1990, 2000, and 2010. Portland State University Population Estimates, 2018.

Age Distribution

The number of people aged 65 and older in the U.S. is expected to increase by nearly three-quarters by 2050, while the number of people under age 65 will only grow by 16%. The economic effects of this demographic change include a slowing of the growth of the labor force, need for workers to replace retirees, aging of the workforce for seniors that continue working after age 65, an increase in the demand for healthcare services, and an increase in the percent of the federal budget dedicated to Social Security and Medicare.[66]

Exhibit 18 through Exhibit 21 show the following trends:

- McMinnville's population is aging slightly faster than Yamhill County's population. Populations of both McMinnville and Yamhill County are aging faster than Oregon's population with respect to each region's growth in median age.
- Over the 2000 to 2013-2017 period, those in the age groups of 45 to 64 and 65 years and older in McMinnville increased by 59% and 48%, respectively. These age groups grew substantially more than all other age categories. This suggests that McMinnville may be retaining residents throughout their mid-to-late careers as they age and/or attracting more people in their mid-to-late careers.
- Yamhill County's population is expected to continue to age, with people 60 years and older increasing from 23% of the population in 2017 to 28% of the population in 2035. This is consistent with statewide trends. McMinnville and Yamhill County may continue to attract mid-life and older workers over the twenty-year planning period. While the share of retirees in these respective areas may increase over the next 20 years, availability of people nearing retirement (e.g., 55 to 70 years old) is likely to increase. People in this age group may provide sources of skilled labor, as people continue to work until later in life. These skilled workers may provide opportunities to support business growth in these areas.

[66] The Board of Trustees, Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds, 2017, *The 2017 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds*, July 13, 2017. *The Budget and Economic Outlook: Fiscal Years 2018 to 2028*, April 2018.

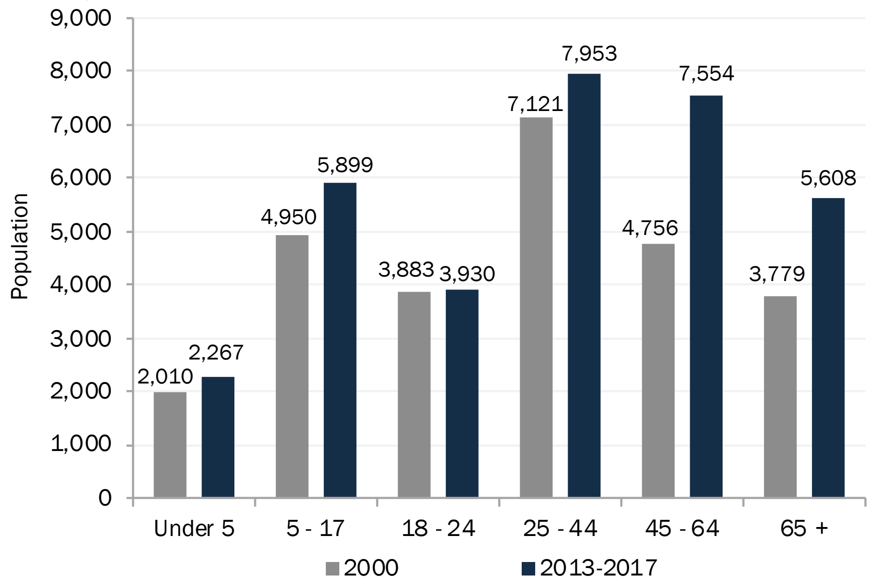
McMinnville's median age increased by about 4.6 years between 2000 and 2013-2017.
This change is slightly larger than Yamhill County's increase of 4.1 years. Median age increases for both regions exceeded Oregon's change of 2.8.

Exhibit 18. Median Age, McMinnville, Yamhill County, and Oregon, 2000 to 2013-2017
Source: U.S. Census Bureau, 2000 Decennial Census, Table P013; American Community Survey 2013-2017 5-year estimates, Table B01002.

	McMinnville	Yamhill County	Oregon
2000	31.5	34.1	36.3
2013-17	36.1	38.2	39.2

Over the 2000 to 2013-2017 period, McMinnville's largest population increase was for those 45 to 64 (59%) and those aged 65 and older (48%).
This is consistent with statewide trends, where the aforementioned age categories increased the most relative to younger age categories. The Oregon population of those 45 to 64 years of age increased by 30% and those 65 and older increased by 50%.

Exhibit 19. McMinnville Population Change by Age Group, 2000 to 2013-2017
Source: U.S. Census Bureau, 2000 Summary File; American Community Survey 2013-2017 5-year estimates, Table B01001.

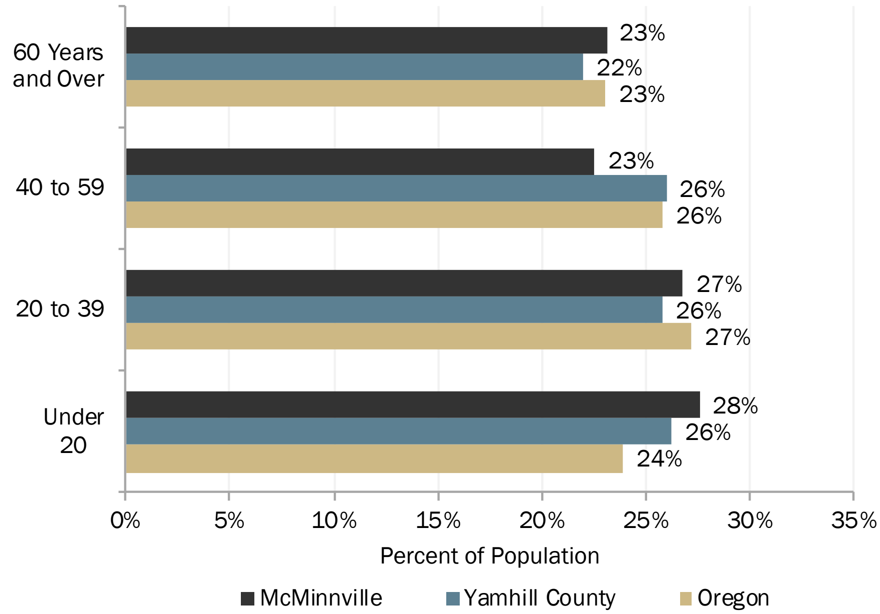


During the 2013-2017 period, the age distribution of McMinnville residents was roughly even across each category, with a slightly smaller proportion of middle-to-older aged adults (40 and older) relative to those 39 years of age and younger.

About 46% of McMinnville residents are 40 years and older and 54% are 39 and younger.

Additionally, the proportion of McMinnville residents under 20 years of age was four percentage points higher than Oregon.

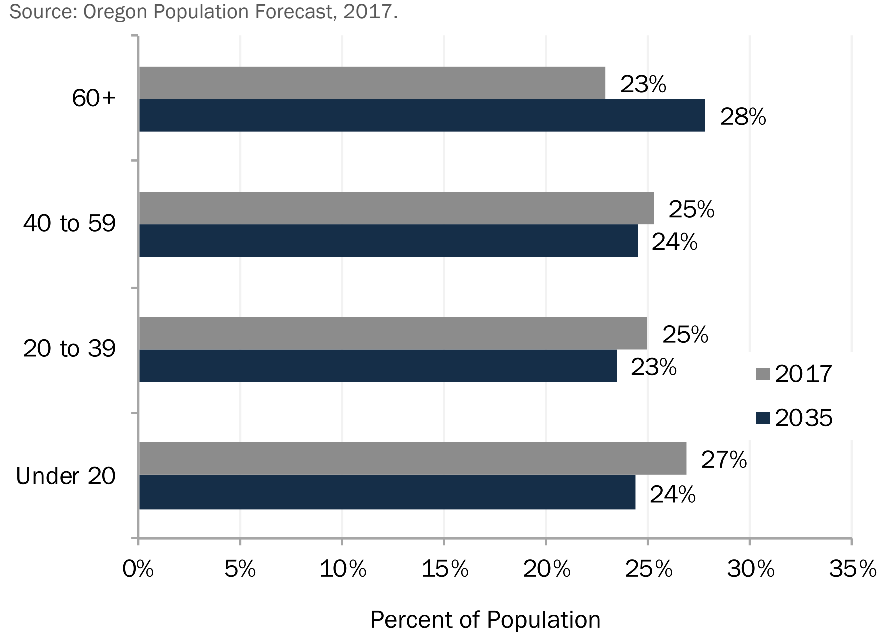
Exhibit 20. Population Distribution by Age, McMinnville, Yamhill County, and Oregon, 2013-2017
Source: U.S. Census Bureau, American Community Survey, 2013-2017 5-year estimate, Table B01001.



By 2035, Yamhill County will have a larger share of residents older than 60 than it does today. The population forecast for all other age groups projects smaller County population shares by 2035.

The share of residents aged 60 years and older will account for 28% of Yamhill County's population, compared to 23% in 2017.

Exhibit 21. Population Growth by Age Group, Yamhill County, 2017 - 2035
Source: Oregon Population Forecast, 2017.



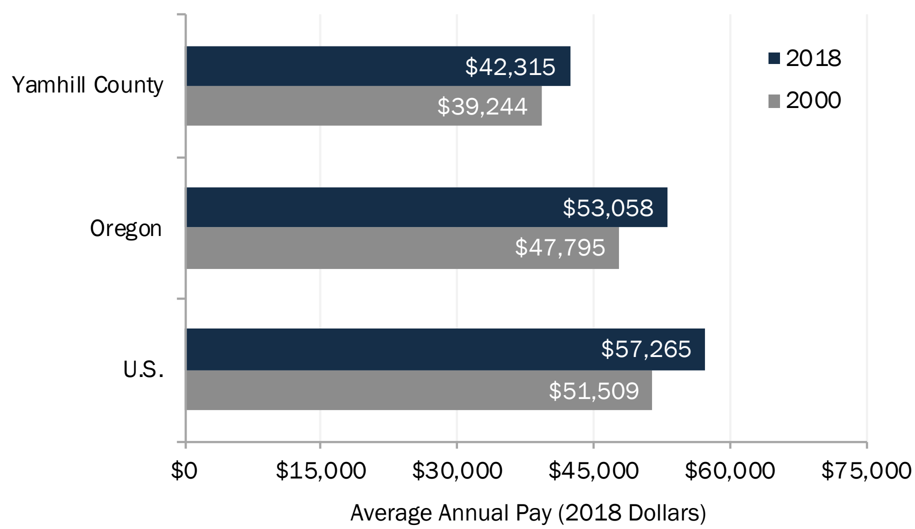
Income

Income and wages affect business decisions for locating in a city. Areas with higher wages may be less attractive for industries that rely on low-wage workers. McMinnville's median household income ($50,299) was below the County median ($58,392) during the 2013-2017 period. Average wages at businesses in McMinnville ($40,105) were lower than the County average ($42,315).[67]

Between 2000 and 2018, Yamhill County's average wages increased as they also did in Oregon and the nation. When adjusted for inflation to 2018 dollars, average annual wages grew by 8% in Yamhill County, 11% in Oregon, and 11% in the nation.

From 2000 to 2018, average annual wages rose in Yamhill County, Oregon, and the nation.
In 2018, average annual wages were $42,321 in Yamhill County, $53,058 in Oregon, and $57,265 across the nation.

Exhibit 22. Average Annual Wage, Covered Employment, Yamhill County, Oregon, and the U.S., 2000 to 2018, Inflation-adjusted 2018 Dollars
Source: Bureau of Labor Statistics, Quarterly Census of Employment and Wages.
Note: 2018 average annual pay estimates are preliminary, according to the BLS.



Over the 2013-2017 period, the median household income in McMinnville was below that of Yamhill County and Oregon by 14% and 10%, respectively.

Exhibit 23. Median Household Income (MHI),[68] 2013-2017, Inflation-adjusted 2017 Dollars
Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B19013.

$50,299	$58,392	$56,119
McMinnville	Yamhill County	Oregon

[67] According to the Census, Household income includes the income of the householder and other income earners ages 15 or older, thus the mix of sources of income ranges in reporting of household income. Average wage is calculated using Quarterly Census of Employment and Wages data, based on payroll information and number of employees by establishment.

[68] The Census calculated household income based on the income of all individuals 15 years old and over in the household, whether they are related or not.

McMinnville median family income during the 2013-2017 period, similar to median household income, was below the median family income of both Yamhill County and Oregon by 12% and 15%, respectively.

Exhibit 24. Median Family Income,[69] 2013-2017

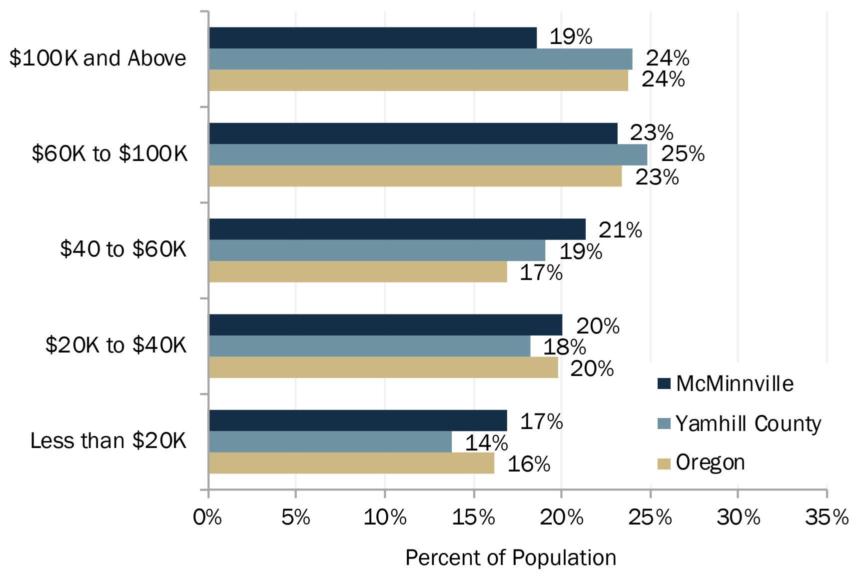
Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B19113.

$58,620	$66,732	$69,031
McMinnville	Yamhill County	Oregon

During the 2013-2017 period, 37% of McMinnville households earned less than $40,000 annually, compared to 32% of Yamhill County households and 36% of Oregon households. Over the same period, McMinnville households had a lower proportion of higher income earnings ($100,000 and above) relative to Yamhill County and Oregon.

Exhibit 25. Household Income by Income Group, McMinnville, Yamhill County, and Oregon, 2013-2017, Inflation-adjusted 2017 Dollars

Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B19001.



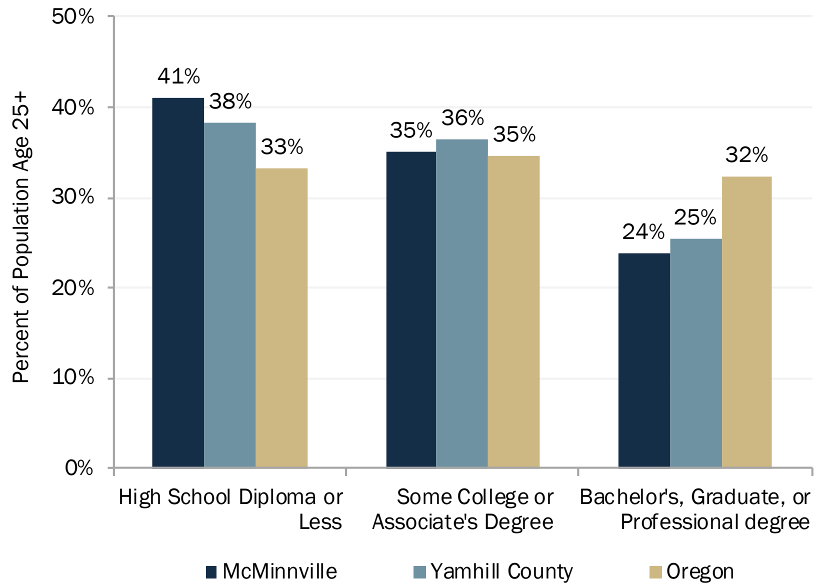
[69] The Census calculated family income based on the income of the head of household, as identified in the response to the Census forms, and income of all individuals 15 years old and over in the household who are related to the head of household by birth, marriage, or adoption.

Educational Attainment

The availability of trained, educated workers affects the quality of labor in a community. Educational attainment is an important labor force factor because firms need to be able to find educated workers.

McMinnville's residents are consistent with residents statewide regarding their completion of some college or attainment of an Associate degree; however, attainment of a Bachelor's degree or a professional degree is lower for McMinnville's residents relative to statewide trends.

Exhibit 26. Educational Attainment for the Population 25 Years and Over, McMinnville, Yamhill County, and Oregon, 2013-2017
Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B15003.



Labor Force Participation and Unemployment

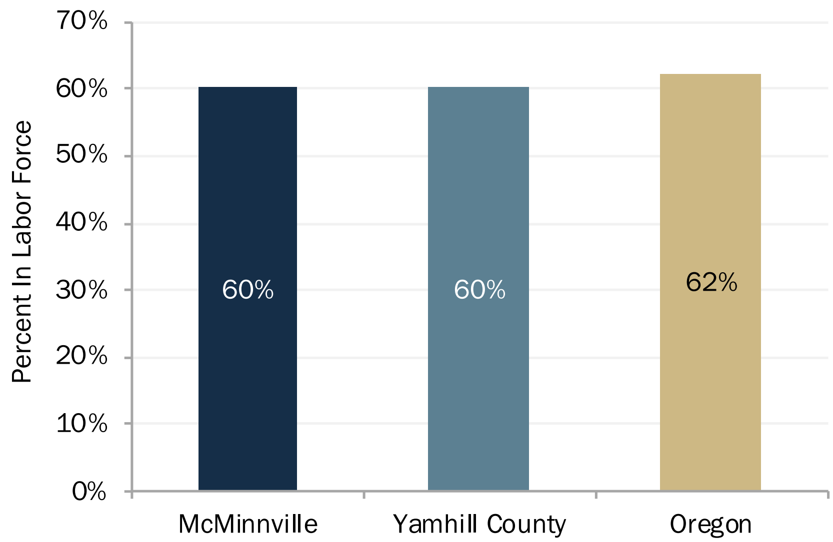
The current labor force participation rate is an important consideration in the availability of labor. The labor force in any market consists of the adult population (16 and over) who are working or actively seeking work. The labor force includes both the employed and unemployed. Children, retirees, students, and people who are not actively seeking work are not considered part of the labor force. According to the 2013-2017 American Community Survey, Yamhill County had more than 49,000 people in its labor force during that period and McMinnville had close to 15,500 people in its labor force.

In 2017, the Oregon Office of Economic Analysis reported that 64% of job vacancies were difficult to fill. The most common reason for difficulty in filling jobs included a lack of applications (30% of employers' difficulties), lack of qualified candidates (17%), unfavorable working conditions (14%), a lack of soft skills (11%), and a lack of work experience (9%).[70] These statistics indicate a mismatch between the types of jobs that employers are demanding and the skills that potential employees can provide.

McMinnville's labor force participation rate for the 2013-2017 period is comparable to Yamhill County.

Exhibit 27. Labor Force Participation Rate, McMinnville, Yamhill County, and Oregon, 2013-2017

Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B23001.



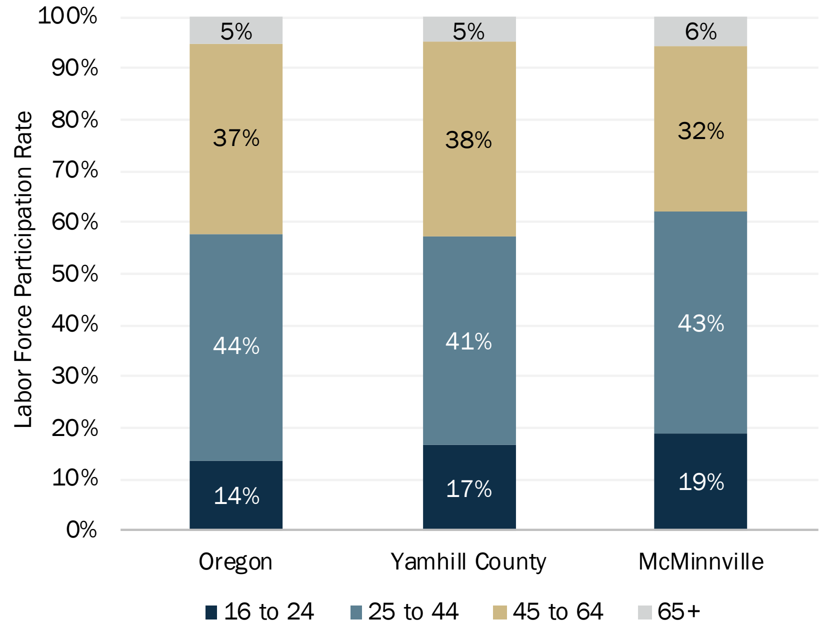
[70] *Oregon's Current Workforce Gaps: Difficult-to-fill Job Openings, Oregon Job Vacancy Survey*, Oregon Employment Department, June 2018.

By age group, McMinnville has a larger share of residents aged 16 to 24 participating in the labor force relative to Yamhill County and Oregon.

In contrast, McMinnville has a smaller share of residents aged 45 to 64 participating in the labor force compared to Yamhill County and Oregon.

Exhibit 28. Labor Force Participation Rate, McMinnville, Yamhill County, and Oregon, 2013-2017

Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table S2301.

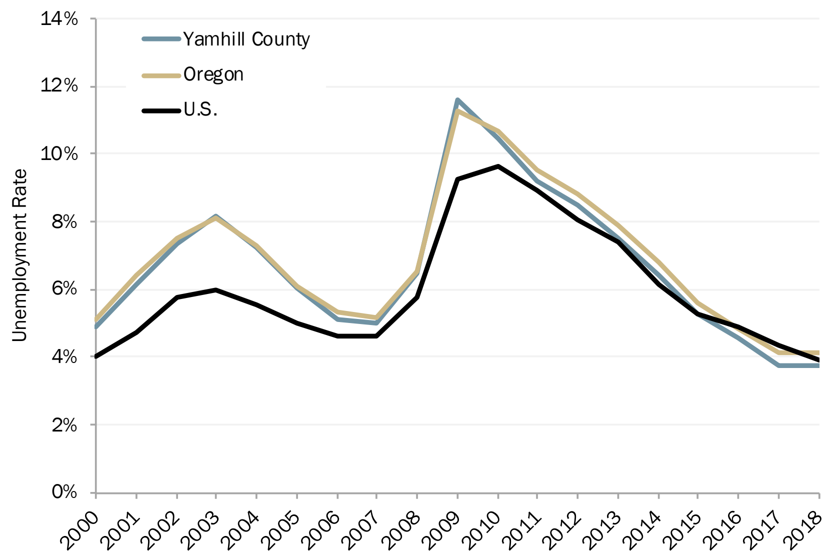


The unemployment rates in Yamhill County, Oregon, and the nation have declined below their respective 2000 rates.

Yamhill County closely follows Oregon's unemployment rate. In 2018, the unemployment rate in Yamhill County was 3.8%. In Oregon, the rate was 3.9%, and in the nation, 4.2%.

Exhibit 29. Unemployment Rate, Yamhill County, Oregon, and the U.S., 2000 – 2018

Source: Bureau of Labor Statistics, Local Area Unemployment Statistics and Labor Force Statistics.



Commuting Patterns

Commuting plays an important role in the McMinnville's economy because employers in these areas are able to access workers from people living in cities across Yamhill County and from the broader Mid-Willamette Valley Region.

Exhibit 31 shows that 38% of people who work in McMinnville reside in McMinnville, 4% commute from Salem, 3% commute from Portland, and 3% from Newberg. The remaining workers commute from various other cities located across the Region.

McMinnville is part of an interconnected regional economy.
Of the approximate 15,080 persons employed in McMinnville (as of 2017), 62% of workers commute to their jobs from outside of the City. The remaining 38% of workers both live and are employed in McMinnville.

Exhibit 30. Commuting Flows, McMinnville, 2017
Source: U.S. Census Bureau, Census On the Map.

As of 2017, about 38% of all people who work in McMinnville also live in McMinnville.

Exhibit 31. Places Where McMinnville Workers Lived,[71] 2017
Source: U.S. Census Bureau, Census On the Map.

38%	4%	3%	3%	3%
McMinnville	Salem	Portland	Newberg	Sheridan

[71] In 2017, 15,080 people worked at businesses in McMinnville, with 38% (5,721) people both employed and working in McMinnville.

About 38% of residents who live in McMinnville also work in McMinnville.
Six percent of McMinnville residents commute to Portland for work and another six percent commute to Salem.

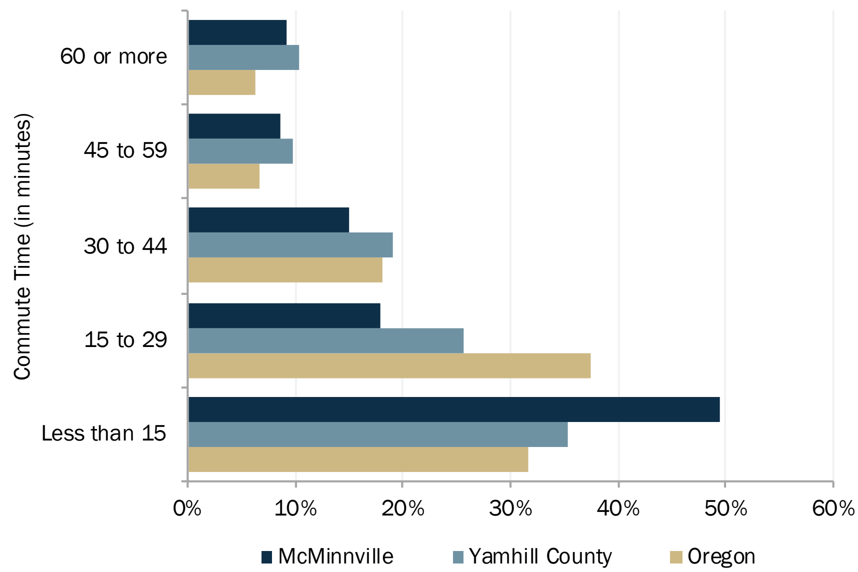
Exhibit 32. Places Where McMinnville Residents were Employed,[72] 2017
Source: U.S. Census Bureau, Census On the Map.

38%	6%	6%	4%	3%
McMinnville	Portland	Salem	Newberg	Hillsboro

During the 2013-2017 period, about 49% of McMinnville workers had a commute of less than 15 minutes, compared to 35% of Yamhill County workers and 32% of Oregon workers.

Relative to Yamhill County and Oregon workers, McMinnville workers tend to have shorter commute times.
Where the majority (55%) of Oregon workers have commutes between 15 to 44 minutes, only 33% of McMinnville workers have commute times of that length. However, at the higher end of commuting times (45 minutes or more), almost one-fifth (18%) of McMinnville workers spend a sizable amount of time on the road.

Exhibit 33. Commute Time by Place of Residence, McMinnville, Yamhill County, and Oregon, 2013-2017
Source: U.S. Census Bureau, American Community Survey 2013-2017 5-year estimates, Table B08303.



[72] In 2017, 5,569 residents of McMinnville worked, with 38% of McMinnville residents (5,569 people) both living and employed in McMinnville.

Tourism in the Willamette Valley Region and Yamhill County

Longwoods International provides regional statistics on travel. The following information is from Longwoods International's 2017 Regional Visitor Report for the Willamette Valley Region, which is defined as Benton, Lane (eastern, non-coastal region), Linn, Marion, Polk, and Yamhill counties.[73] Broadly, travelers to the Willamette Valley Region accounted for:[74]

- 5.5 million overnight trips in 2017, or 16% of all Oregon overnight travel that year.
- The primary market area for travelers over 2016 and 2017 were Oregon, California, and Washington:[75] 48% of Willamette Valley visitors came from Oregon, 19% came from California, and 14% came from Washington.
- About 53% of visitors stayed 2 or fewer nights over 2016 and 2017 in the Willamette Valley, 32% stayed 3 to 6 nights, and 15% stayed 7 or more nights. The average nights spent in the Willamette Valley Region was 4.3.
- The average per person expenditures on overnight trips in 2017 ranged from $9 on recreation, sightseeing, and entertainment to $35 per night on lodging.
- About 75% of visits to the Willamette Valley Region over 2016 and 2017 were via personally-owned automobiles/trucks, 18% were by rental car, and 13% were via an online taxi service (such as Lyft or Uber).
- Over 2016 and 2017, visitors tended to be middle-to-older aged adults, with the average age being about 48.7. Those aged 18 to 34 made up 24% of overnight visits, 34% were between 35 and 54, and 42% were 55 and older. About 56% of visitors graduated college or completed a post-graduate education. Additionally, 44% of visitors earned less than $50,000 in household income, 37% earned between $50,000 and $99,999, and 19% earned more than $100,000. The average household income for Willamette Valley visitors was about $64,560.

[73] Travel Oregon. "Oregon 2017: Regional Visitor Report, Willamette Valley Region," Longwoods International, October 2018. Retrieved from: http://industry.traveloregon.com/research/archive/willamette-valley-oregon-overnight-travel-study-2017-longwoods-international/.

[74] Longwoods International issues caution in interpreting these tourism estimates in the Willamette Valley Region as the sample size for the marketable trips this region is low. For this reason, the data reported is a combination of survey data from 2016 and 2017.

[75] The data reported in this bullet as well as other bullets noting years "2016 and 2017" are based on *marketable trips*. Longwoods International states marketable trips "are defined as those trip types that can be influenced by marketing efforts and include leisure and business-leisure trips."

Yamhill County's direct travel spending increased 139% from 2000 to 2018.
The Willamette Valley Region's direct travel spending increased by 100% over the same period.

Exhibit 34. Direct Travel Spending ($ millions), 2000 and 2018
Source: Dean Runyan Associates, Oregon Travel Impacts, 1991-2018.

	Willamette Valley Region	Yamhill County
2000	$1,000	$56.7
2018	$2,000	$135.7

Yamhill County's lodging tax receipts increased 653% over 2006 to 2018.

Exhibit 35. Lodging Tax Receipts ($ millions), 2006 and 2018
Source: Dean Runyan Associates, Oregon Travel Impacts, 1991-2018.

	Yamhill County
2006	$111.0
2018	$835.8

Yamhill County's largest visitor spending for purchased commodities is accommodation and food services.

Exhibit 36. Largest Visitor Spending Categories ($ millions), Yamhill County, 2018

Accommodations and Food Services	Arts, Entertainment, and Recreation	Retail
$27.9	$6.3	$3.9

Yamhill County's largest employment generated by travel spending is also in the accommodations and food services industry.

Exhibit 37. Largest Industry Employment Generated by Travel Spending (thousands), Yamhill County, 2018
Source: Dean Runyan Associates, Oregon Travel Impacts.

Accommodations & Food Services	Arts, Entertainment. and Recreation	Retail
1.1 jobs	0.5 jobs	0.1 jobs

The number of person nights spent in Yamhill County increased from 1,706,000 in 2017 to 1,773,000 in 2018, an increase of 67,000 overnight stays, or 4%. Over the last nine years, from 2010 to 2018, person nights increased approximately 19%.

4. Economic Development Potential

The fundamental purpose of Goal 9 is to make sure that a local government plans for economic development. The planning literature provides many definitions of economic development, both broad and narrow. Broadly,

> "Economic development is the process of improving a community's well-being through job creation, business growth, and income growth (factors that are typical and reasonable focus of economic development policy), as well as through improvements to the wider social and natural environment that strengthen the economy."[76]

That definition acknowledges that a community's wellbeing depends in part on narrower measures of economic wellbeing (e.g., jobs and income) and on other aspects of quality of life (e.g., the social and natural environment). In practice, cities and regions trying to prepare an economic development strategy typically use a narrower definition of economic development; they take it to mean business development, job growth, and job opportunity. The assumptions are that:

- Business and job growth are contributors to and consistent with economic development, increased income, and increased economic welfare. From the municipal point of view, investment and resulting increases in property tax are important outcomes of economic development.
- The evaluation of tradeoffs and balancing of policies to decide whether such growth is likely to lead to overall gains in wellbeing (on average and across all citizens and businesses in a jurisdiction, and all aspects of wellbeing) is something that decision makers do after an economic strategy has been presented to them for consideration.

That logic is consistent with the tenet of the Oregon land-use planning program: all goals matter, no goal dominates, and the challenge is to find a balance of conservation and development that is acceptable to a local government and the State. Goal 9 does not dominate, but it legitimizes and requires that a local government focus on the narrower view of economic development regarding economic variables.

In that context, a major part of local economic development policy is about local support for business development and job growth; that growth comes from the creation of new firms, the expansion of existing firms, and the relocation or retention of existing firms. Specifically, new, small businesses (those with fewer than 100 employees) are accounting for a larger share of the job growth in the United States.[77] This shift toward a focus on entrepreneurship, innovation, and small businesses presents additional options for local support for economic development

[76] *An Economic Development Toolbox: Strategies and Methods*, Terry Moore, Stuart Meck, and James Ebenhoh, American Planning Association, Planning Advisory Service Report Number 541, October 2006.

[77] According to the 2018 Small Business Profile from the US Small Business Office of Advocacy, small businesses account for over 99 percent of total businesses in the United States, and their employees account for nearly 50% of American workers. https://www.sba.gov/sites/default/files/advocacy/2018-Small-Business-Profiles-US.pdf

beyond firm attraction and retention. Thus, a key question for economic development policy is: *What are the factors that influence business and job growth, and what is the relative importance of each?* Specifically, OAR 660-009-0015(4) requires that cities conduct an assessment of community economic development potential, as part of the EOA. This assessment considers: market factors, infrastructure and public facility availability and access, labor, proximity to suppliers and other necessary business services, regulations, and access to job training.

The local factors that form McMinnville's competitive advantage are summarized in the subsections below.

Factors Affecting Community Economic Development Potential

OAR 660-009-0015(4) stipulates that relevant economic advantages and disadvantages considered with the EOA "may include but are not limited to" factors of: location, size and buying power of markets; availability of transportation facilities for access and freight mobility; public facilities and public services; labor market factors; access to suppliers and utilities; necessary support services; limits on development due to federal and state environmental protection laws; and educational and technical training programs." This 2020 EOA update is organized to address these considerations together with other factors distinctive to economic development in McMinnville.

Location, Size & Buying Power of Markets. Location is an economic factor that is prominently mentioned in prior planning documents. The 2019 *MAC-Town 2032 Economic Development Strategic Plan* identifies both strengths and weaknesses related to McMinnville's location and associated transportation factors. Comparative advantages and disadvantages and their implications for economic opportunity in McMinnville are drawn from the 2013 EOA together with more recent MEDP, SEDCOR, and related industry analyses, summarized as follows.[78]

Advantages:

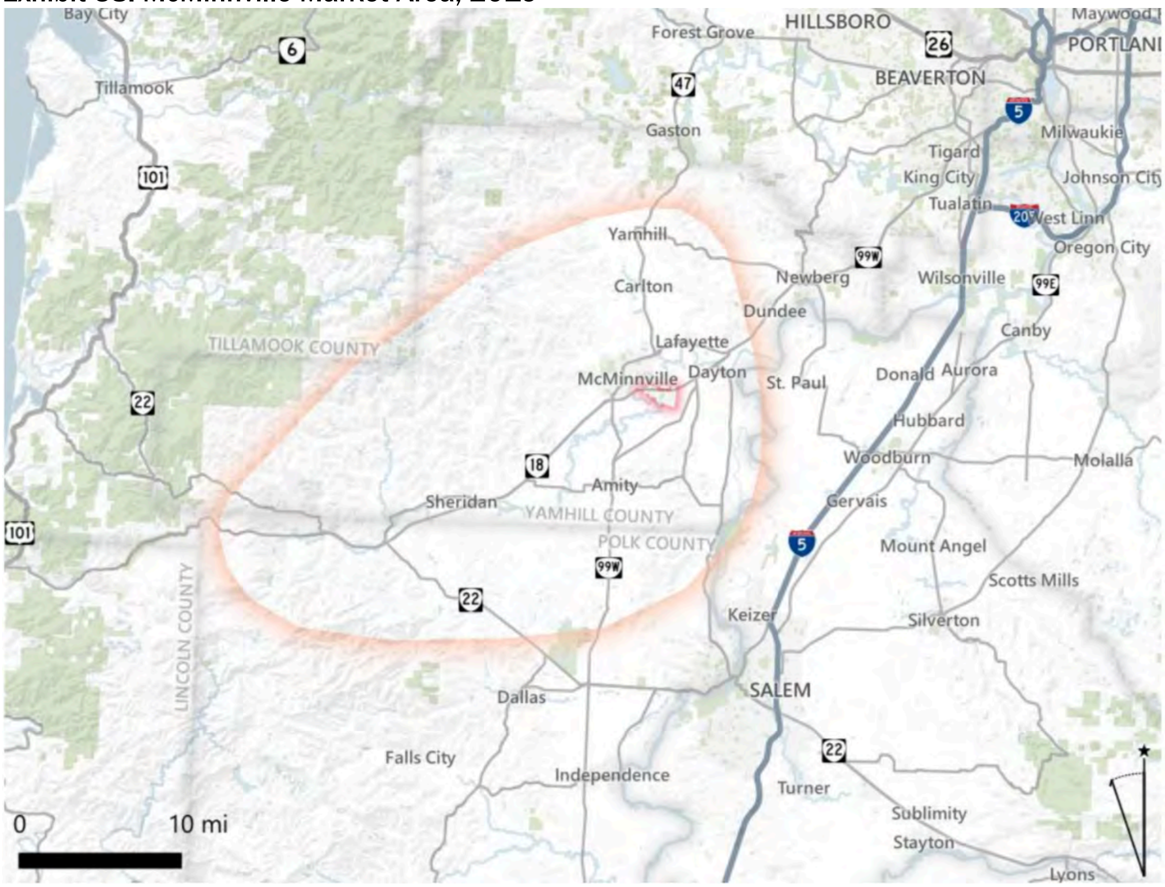
- *Ease of access – with proximity to Portland, Salem & the Oregon coast*. McMinnville is only 40 miles from Portland, 27 miles from Salem, and 51 miles from Lincoln City on the Oregon coast.[79]
- *Central location to serve local community and regional employment and commercial service needs*. McMinnville is well situated to serve the employment and commercial needs of the local community and a larger market area of approximately 75,000 residents, according to the Three Mile Lane market analysis. The City's market area encompasses

[78] The 2020 EOA update provides updated information related to comparative advantages and disadvantages, while keeping the structure of the 2013 EOA. Factors that are no longer relevant to McMinnville were removed.

[79] Source is www.maps.google.com.

the majority of Yamhill County. For reference, a map of McMinnville's market area is provided in Exhibit 38.[80]

Exhibit 38. McMinnville Market Area, 2019



Source: McMinnville Three Mile Lane Area Plan: Market Analysis; TIGER, Leland Consulting Group.

McMinnville has a substantial population-to-jobs ratio of 2.2, compared to 2.5 in Newberg, and 3.0 in Yamhill County.[81] This is due in part to McMinnville's ability to attract workforce both locally and regionally. As noted by the 2007 MEDP, McMinnville offers potential for commercial retail uses that often require a substantial trade area base of 50,000-100,000 or more customers for market viability.[82] The competitive viability of service uses such as regional professional, business, financial and medical facilities also benefits from the ability to serve a market area extending beyond the immediate community. The 2019 Strategic Plan confirms opportunities for McMinnville to expand on both retail and non-retail commercial uses.

- *Proximity to regionally recognized destination attractions including Yamhill and Willamette Valley wineries, Evergreen Museum & downtown McMinnville as specialty destinations*. The

[80] McMinnville Three Mile Lane Area Plan: Market Analysis, Leland Consulting Group, April 2019.

[81] Based on analysis of 2017 covered employment data from OED and population data from PSU.

[82] Population standards for a regional center are included in sources such as the Urban Land Institute, *Shopping Center Development Handbook,* 1999. Minimum population size can vary by type of retail or service commercial business.

North Willamette Valley region–comprised of Yamhill-Carlton, Chehalem Mountains, McMinnville, Ribbon Ridge, Dundee Hills, and Eola-Amity Hills – has been identified with 503 wineries and 20,279 acres of grapes as of 2018.

In addition to recognition as the leading production area for Oregon's wine industry, Yamhill County agricultural production adds to both local and visitor appeal. The area is known for quality fresh-to-market products including berries, nuts, milk, eggs, fruits and vegetables – and increasingly for custom/organic livestock production. Nursery crops, grass and legume seeds, Christmas trees, grain and hay add to the diversity of Yamhill County agricultural production – as the 6th leading county in terms of value of production in Oregon in 2017.[83]

The Evergreen Air Museum attracted an estimated 88,400 visitors in 2018. With over 3 million annual visitors, the Spirit Mountain Casino located 24 miles from downtown McMinnville is widely cited as one of the top visitor draws in the state.[84]

McMinnville also is recognized statewide for its remarkable comeback and current vitality of its historic downtown core area. Promoted as "Oregon's favorite main street," the McMinnville Downtown Association characterizes the appeal of downtown in these terms:

> "Quaint boutiques, unique shops, and local galleries abound. Music fills the air from our farmers' market performers and outdoor concerts all summer long, and pours out of our restaurants and pubs on winter evenings."[85]

Disadvantages:

- *Retail sales leakage occurring due to lack of major comparison retail*. As described by the Three Mile Lane market analysis, there is a considerable retail sales leakage of an estimated $208 million annually throughout the McMinnville Market Area. Factoring in household growth projections, the market analysis forecasts demand for an additional 539,000 square feet of retail development in the McMinnville market area over the coming decade, with 150,000 square feet (or about 28%) being captured in the Three Mile Lane area.[86]

  Sites in the McMinnville UGB offer the potential to serve a local and regional market extending to Sheridan/Willamina, Polk County and even some coastal communities – with improved opportunity to serve the Newberg-Dundee area as a result of the recently completed bypass construction. Centrally located sites with good highway access and street visibility can be instrumental to attract commercial businesses that may require market areas of 50,000-100,000+ population.

---

[83] U.S. Census of Agriculture. Yamhill County Profile. 2017.

[84] As cited by Memorandum #2, Market Study Current Conditions, prepared as part of Northeast Gateway Plan by Leland Consulting Group for the City of McMinnville, May 23, 2011.

[85] As cited by www.downtownmcminnville.com, as of September 2012.

[86] McMinnville Three Mile Lane Area Plan: Market Analysis, Leland Consulting Group, April 2019.

- *Need for additional value-added opportunities for visitors.* A key challenge for the future is to provide more and better value-added opportunities for visitors to spend more time and money while visiting the McMinnville area.

  Also, the 2019 *Willamette Valley Winery Association Visitor Profile Study* reported that about 53.8% of domestic visitors to the area are non-Oregon residents. Survey respondents noted difficulty of travel to the Willamette Valley as a key factor in not returning to the area. The study also stated that the typical Oregon resident wine tourist spends about $151.63 per person per day, while the typical non-Oregon resident spends about $416.43 per person per day.

  Note: The 2013 EOA noted the following disadvantage at that time:

  > "*Limited duration of tourism visitation & low expenditure capture.* While the McMinnville area and Yamhill County can now boast some of the state's top tourism attractions, visitor spending does not appear to match visitation. This is because visitors tend not to stay overnight (but are often day visitors) and do not appear to be making substantial expenditures while in the area."

  This has changed substantially. Visit McMinnville reports that visitor spending in Yamhill County has doubled in the last ten years. Lodging statistics in McMinnville are up across the board, including demand, rate, length of stay, occupancy, revenue, and number of properties & inventory of rooms.

Availability of Transportation Facilities for Access & Mobility. Location, size and buying power of markets are substantially affected by current and planned transportation facilities. This is particularly the case in Yamhill County which increasingly has experienced the negative economic development effects of highway congestion on the 99W corridor. However, completion of Phase 1 of the Newberg-Dundee Bypass in January of 2018 has partially reduced congestion, especially for local residents of the region.

Economic development opportunities may be substantially enhanced with further plans for transportation improvements—as with the second phase of the Newberg-Dundee bypass, which is currently in its design phase. A broader look at the role transportation plays in shaping McMinnville's economic opportunities is outlined as follows.

Advantages:

- *Western & mid-valley cross-roads*. McMinnville is directly served by Highway 99W – as a historically significant central organizing spine to access commercial and industrial businesses throughout the community. Highway 18 has come to play an increasingly important role, not only as a by-pass route for through traffic traveling between the Oregon coast and the Portland metro area but also as a means of accessing more local and regional employment/institutional uses as well as the McMinnville airport. While not directly in McMinnville, Highway 22 (via 99W) provides access to Salem and to Interstate 5 (within approximately 30 miles).

- *Changing traffic patterns*. While serving as one indicator of overall economic activity, this is of particular importance for retail and service businesses as well as tourism oriented destinations reliant on high traffic counts. As of 2018, an estimated 22,900 vehicles per day traveled Highway 18 in the vicinity of the McMinnville airport – an increase of 44% over 2005 counts.[87]

  On Highway 99W, up to an estimated 21,900 vehicles traveled daily through McMinnville in 2018, (representing an increase in 99W in-town traffic with 18,900 vehicles in 2013).[88]

- *Air and rail accessibility*. As a general aviation airport, McMinnville Municipal Airport has the capacity to handle corporate jet aircraft – together with availability of aircraft rentals, flight instruction, aircraft maintenance, and fuel. The Portland International Airport (PDX) is located 36 miles from McMinnville, offering daily direct flights with passenger and freight service to Asia, Europe, and Mexico as well as cities throughout the U.S.

  The Willamette and Pacific Railroad maintains freight service to McMinnville industrial users. This short-line carrier connects to the Burlington Northern Santa Fe and Union Pacific carriers for transcontinental shipments to and from McMinnville.

Disadvantages:

- *Poor linkages to Interstate freeway access*. Congestion on the 99W corridor in the area of Dundee and further north is cited as a disincentive to business investment from existing and prospective new firms in documents including the 2019 *MAC-Town 2032 Economic Development Strategic Plan*. Of particular concern is the approximate 30-mile distance from McMinnville to the Interstate 5 corridor, exacerbated by substantial congestion affecting connecting routes during much of the business day, especially for the segment of the 99W corridor extending from the Highway 18 merge north of McMinnville through Newberg. The *MAC-Town 2032 Economic Development Strategic Plan* notes that the development of the Highway 99 bypass will likely "improve access to McMinnville."
- *Challenging Air & Rail Servic*e. While the distance to PDX for scheduled air service is less than 50 miles, regional roadway congestion makes travel times unpredictable during business hours and about half this distance from McMinnville occurs on two-lane roadways. With increasing regional traffic congestion, access to Portland International Airport is ever more problematic both for freight shippers and employees who must travel for their jobs.

  As described by the 2001 EOA, "lack of convenient and efficient access to Portland International Airport was one factor cited by Hewlett-Packard in its decision to leave McMinnville, and it may discourage other existing or prospective firms from expanding

[87] Annual Average Daily Traffic counts (point near McMinnville Airport). Oregon Department of Transportation. https://gis.odot.state.or.us/transgis/

[88] Annual Average Daily Traffic counts (point near McMinnville High School). Oregon Department of Transportation. https://gis.odot.state.or.us/transgis/

or locating in McMinnville." Also noted is that rail traffic bound for Portland has been routed south, then north, due to the unsuitability of existing trackage north of McMinnville.

The Oregon Department of Transportation (ODOT) completed construction of Phase 1 of the Newberg-Dundee Bypass and has proceeded into the design phase for Phase 2, which will affect economic opportunities in the coming years. Per the fact sheet associated with Phase 1 of the Bypass project, congestion was reduced by approximately 20% in downtown Newberg and by 40% in downtown Dundee. Freight traffic was also reduced by approximately 45% in Newberg and 68% in Dundee. These congestion reductions have the added benefit of increasing safety on 99W and simultaneously diminishing travel time during peak commute periods.[89] The Phase 2 improvement (currently in a design phase) is expected to have the effect of further reducing travel times on the 99W corridor north of McMinnville to Newberg via an extension of the Phase 1 Bypass.

Public-Private Facilities, Services & Environmental Factors. This discussion combines related items of OAR 660-009-0015(4) as related to public facilities and public services, access to suppliers and utilities, necessary support services, and environmental limitations. This is due to the inter-connected roles of these factors in affecting overall economic activity for both industrial and commercial business activities.

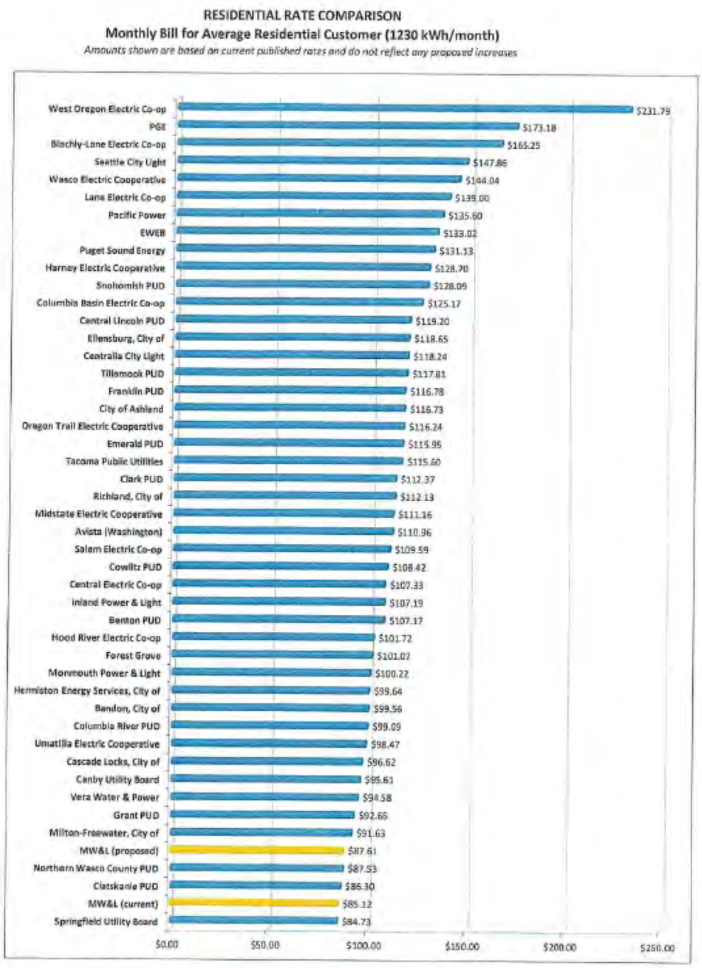
The availability and cost of both public and private support services can affect the costs of living or doing business in McMinnville. Environmental factors can similarly serve to constrain or, in some cases, benefit economic development investments. A firm's location decision may reflect consideration of the comparative value versus cost of doing business in McMinnville or other potentially viable locations in Oregon or elsewhere.

Advantages:

- *Low public utility rates*. McMinnville is recognized as offering low electricity and water rates compared with other public and private utilities region-wide and statewide (Exhibit 39). The public utility provider, McMinnville Water and Light (MW&L), was founded in 1889 and continues to provide low cost, reliable water and power services.

[89] Oregon Department of Transportation. 2014. *Newberg-Dundee Bypass Project*. Retrieved from: http://oregonjta.org/region2/files/highway99w/docs/overall-fact-sheet-for-web-dec-2014.pdf

Exhibit 39. Residential Rate Comparison for Oregon Utility Services



Source: McMinnville Water and Light.

- *Water & sewer capacity for growth.*
  - *Water supply and water rights*. Water supply is from the Yamhill and Nestucca River basins. In 2005, MW&L completed expansion of McGuire Reservoir, more than doubling reservoir capacity, providing ample water supply through at least 2025. Beyond 2025, MW&L has sufficient capacity for water rights and supply to meet needs through at least 2075. This will address needs for the City's 20-year planning horizon of 2041 and the longer 2067 planning horizon.
  - *Treatment capacity.* In 2010, MW&L completed expansion of the Water Treatment Plant (WTP). This increased capacity from 13 MGD to 22 MGD. The WTP can be expanded from the current 22 MGD to a maximum of 30 MGD. MW&L's 2010 master plan projects that this will provide treatment capacity through 2045. This addresses needs through the City's 20-year planning horizon through 2041, and MW&L can either expand treatment capacity at this location or supplement with new treatment capacity from the new intake on the Willamette to meet needs beyond 2045 through the 2067 planning horizon.

- *Long-Term Water Supply.* Previously noted as a disadvantage in the 2013 EOA, recent actions have turned long-term water supply into an advantage. While recent expansions to McGuire Reservoir are expected to provide ample supply through about 2025, actions are also being undertaken to address longer-term needs. A 2008 Yamhill County Water Supply Analysis concluded that most providers in Yamhill County have adequate water rights to meet projected maximum day demands to 2050; exceptions are noted for Dayton, Lafayette, McMinnville Water and Light (MWL), and Yamhill. As a result, MWL is partnering with the Cities of Carlton, Dayton and Lafayette in an application to the state to secure a water permit to the Willamette River as a potential second municipal source. In addition, this will provide McMinnville with a secondary source, as well as adequate supply and water rights through 2075.

  In 2011, the Yamhill Regional Water Authority (YRWA) acquired a water right on the Willamette River with a 2011 priority date. In 2016, MW&L acquired an additional right with a priority date of 1982. In 2017, MW&L purchased a site on the Willamette River for a future intake and pump station. In 2018, MW&L procured the services of Carrollo Engineering to verify that the site would support facilities for a 50 MGD intake and pump station. In 2019, MW&L signed an agreement to supply water to the City of Lafayette. Engineering Design of the inter-tie is underway with construction in 2020. Tentative plans are to start supplying Lafayette with water in the summer of 2020. In 2020, MWL anticipates acquiring an additional senior water right from the Willamette for 4.8 MGD. For McMinnville, this means there will be adequate supply and water rights to meet needs through at least 2075.

- *Internet Services*. In the 2019 strategic plan, goal 1.4.3, which is to "identify and complete high-priority infrastructure projects that serve McMinnville's current and future business community," details a potential project where City staff will evaluate a 10GB fiber network with local Internet Service Provider, Online Northwest.

- *Local business entrepreneurship – with a record of technological innovation*. Focus groups conducted in 2007 for the MEDP strategic economic development plan coupled with interviews for the Marion-Polk-Yamhill County regional economic development strategy have pointed to this factor as a major distinctive strength of the mid-Willamette Valley region. The *MAC-Town 2032 Economic Development Strategic Plan* dedicates one of its target sector goals to foster opportunities in technology and entrepreneurship. This goal is comprised of four strategies, which include making McMinnville a location for small- and medium-sized technology firms to relocate and grow, provide co-working and other work arrangements enabled by telecommunications technology, incubate new businesses and start-ups, and create new talent pipelines for tech-related occupations.[90]

[90] City of McMinnville. *MAC-Town 2032: Economic Development Strategic Plan*. Retrieved from: https://www.mcminnvilleoregon.gov/sp/page/mac-town-2032-economic-development-strategic-plan

Perhaps less readily recognized is the diversity of other small manufacturing and industrial companies that serve global markets through technological innovation and astute market positioning. Examples range from area aerospace and metals component manufacturers to technology companies to wineries.

- *Comparative property tax rates*. While the significance of property and other taxes to business investment decisions is debated nationally and regionally, there is no question that McMinnville's relative tax burden has changed appreciably in a more favorable direction in recent years.
- *Economic development assistance*. A public services advantage noted with the 2001 EOA is the presence of the McMinnville Downtown Association, providing economic development assistance for businesses locating or expanding in the historic downtown. Since its formation in 1976, the association has been recognized for successful downtown revitalization and leadership among Oregon Main Street communities. Formed in 2006, the public-private organization, McMinnville Economic Development Partnership (MEDP), continues to serve as a single point of contact for economic development assistance for industrial and other firms throughout the McMinnville community Further, the 2019 *MAC-Town 2032 Economic Development Strategic Plan* identified a "positive business climate perceptions and a sense of civic leadership" as a strength in McMinnville.

Disadvantages:

- *Environmental Effects on Land Supply*. The City of McMinnville has identified lands in steep slopes (of 15% or greater), floodplains, and wetlands identified in the National Wetlands Inventory (NWI) as environmental constraints. Lands with any of these characteristics are considered as constrained or unbuildable and have been deducted from lands identified as available whether vacant or partially vacant.

Labor Market Factors (including Training). This discussion combines two factors listed by OAR 660-009-0015(4) – notably items (d) labor market factors and (h) education and technical training programs – due to their mutual interdependence.

The availability of adequate, qualified labor is critical for economic development. This labor force is not limited to local McMinnville residents as local firms can draw workers from surrounding communities situated within a reasonable commute distance. Similarly, a portion of the McMinnville adult population may find employment in other communities – both nearby as well as extending into the Salem and Portland metro areas.

While direct information on the quality of the workforce is not always readily available, demographic characteristics that are typically used to indicate the quality of the labor force include age distribution, educational attainment, employment by occupation or industry, and race/ethnicity. Also of importance are opportunities for workforce training.

Advantages:

- *Favorable workforce demographics*. As detailed with the comparative demographic and economic data in Chapters 2 and 3 of this EOA update, factors conducive to adequacy of abundant labor supply in McMinnville include above average population growth rates, low median age of population, and high proportion of McMinnville residents who are able to find work locally. A well-represented Latino population also offers advantages for businesses that benefit from greater cultural diversity in accessing customers in a more diverse marketplace both regionally and nationally.

- *Ability to access much larger metro area workforce pool.* With an in-city labor pool of over 15,000, McMinnville employers have ready access to a countywide labor market of nearly 50,000. For some specialty positions in which the local market may not have adequate depth, there is an even larger regional Mid-Valley labor pool on which to draw – much of which is located within a 20-40 mile drive from McMinnville. However, employers have noted the immediately available labor pool in McMinnville as an issue.

- *Moderate local & countywide unemployment*. The 2013 EOA noted that McMinnville unemployment in McMinnville (in 2010) was 9.3%—above the U.S. rate of 9.0% and below the statewide rate of 10.4%. Comparatively, unemployment has improved since the recession. In 2018, the unemployment rate in Yamhill County was 3.8%.

- *The Linfield/Chemeketa Community College connection.* As a top-ranked U.S. News & World Report college in the western U.S., Linfield College has established a west coast if not national reputation for academic excellence and value. In December 2019, Linfield was ranked #117 among national liberal arts colleges by the national magazine U.S. News & World Report.[91] A question for the future may be how best to leverage this reputation for greater community and economic benefit.

  The Chemeketa Community College – Yamhill Campus offers increasing opportunity for linkages with economic development, particularly through workforce training targeted to the needs of local employers. Another example of a partnership opportunity would be the creation of an entrepreneurship program – marketed cooperatively to area businesses. The Yamhill Valley Campus was expanded to a new location directly adjacent to the Highway 18 corridor in 2011.

- *Workforce training resources*. Workforce recruitment programs are available through the McMinnville WorkSource Center (Oregon's public workforce system), Express Employment Professionals, and the Oregon Employment Department. For young professionals, career centers at Linfield College, Chemeketa Community College (Yamhill Valley Campus), George Fox University, Portland Community College (Newberg), and McMinnville High School, provide support for improving skills and

[91] U.S. News. *Best Colleges Rankings*. Linfield College, 900 S.E. Baker St., McMinnville, OR. Rank information retrieved on December 19, 2019 from: https://www.usnews.com/best-colleges/linfield-college-3198

connecting them with businesses in the broader Yamhill County region.[92] Additionally, the MDEP operates a summer internship program named McMinnville WORKS, which assists in connecting local businesses with talented collegiate youth.[93]

Disadvantages:

- The most significant labor force disadvantage is indicated by relatively low rates of college graduates. Only 24% of McMinnville adults have college degrees, compared to 25% in Yamhill County and 32% in Oregon, according to 2013-2017 ACS 5-year estimates.
- A related disadvantage may lie with relatively high proportions of service workers – as compared with the entire county, Mid-Valley region, entire state and U.S. This is one reason that McMinnville household incomes are also below those of the comparison geographies.

  However, in some cases this available labor force will constitute a comparative advantage for firms that depend on service occupations. This is especially the case if local work force skills can also be enhanced over time to allow for improved wages and career options.

Other Factors. In addition to the factors identified in conjunction with OAR 660-009-0015(4), there are other factors of importance specifically to the McMinnville community. These relate to local demographics and also land availability. Key advantages and disadvantages as noted from this and other similar analyses pertinent to McMinnville are outlined below.

Advantages:

- *Diverse industry mix.* McMinnville has a relatively diverse mix of industry for a community its size, a factor noted by the 2001 EOA. This diverse employment base is attributed, in part, to the actions of McMinnville Economic Development Partnership (MEDP). Also noted by the 2001 EOA, the 2007 MEDP Strategic Plan, and more recently in the 2019 *MAC-Town 2032 Economic Development Strategic Plan*), is that the local diversity of employment is due in part to the perceived quality of life in McMinnville. This factor is important to attracting businesses and entrepreneurs seeking quality communities for themselves and their employees.
- *A relatively young & diverse population – with increased Latino presence.* Median age of McMinnville residents is three years less than that of the entire state of Oregon. Higher proportions of residents are found locally for all age cohorts from childhood to young adults (to age 39). Companies looking for youthful workforce can find it in McMinnville.

[92] McMinnville Economic Development Partnership (MDEP), Find Your Workforce. https://www.mcminnvillebusiness.com/workforce

[93] MDEP, The McMinnville WORKS Summer Internship Program. https://www.mcminnvillebusiness.com/mcminnville-works-internship-program

McMinnville is at the leading edge of Oregon's population transformation. The community's Latino population increased from less than 15% of the city-wide total in 2000 to 22% in 2013-2017 (well above the statewide proportion of 13%). Throughout the entire mid-Willamette Valley region as well as statewide, the Hispanic/Latino population is expected to represent an increasingly important component of the next generation of workers and of customers for commercial services. McMinnville has an opportunity to lead the way – providing new career options for Latino workers and business development options for Hispanic-owned businesses.

- *Small-town residential charm including a walkable downtown*. While quality of life is often considered difficult to quantitatively assess, perceptions of quality of life relative to other communities can affect business location and expansion decisions. This is especially the case for entrepreneurial and other individually owned, non-corporate enterprises.

  The 2018 Economic Development Strategic Plan's mission states, "Businesses leverage local and regional talent pipelines while attracting new employees and residents who value McMinnville's high quality of life… As we evolve, we prize our small-town roots and we maintain McMinnville's character."[94] As described by the website of the McMinnville Area Chamber of Commerce, "McMinnville is located in the western portion of Oregon's agriculturally rich Willamette Valley on U.S. Highway 99W."

  The quiet, friendly city enjoys a central location to Pacific Ocean beaches (50 miles), the big city (Portland - 30 miles to the northeast), and the state capitol (Salem - 25 miles southeast), with an easy scenic drive to Mt. Hood and other ski areas. "McMinnville offers small-town charm in a full-service city."[95]

Disadvantages:

- *Restricted population growth.* Since 2000, population has been increasing somewhat more rapidly than the state, but at an approximate 1.4% per year average rate. In the past, City services have been able to match without experiencing major fiscal issues. However, continued population growth at a somewhat reduced coordinated population growth rate averaging about 1.2% per year is now forecast through 2067. Constrained land supply is restricting growth and the cost of services is increasing faster than increases in assessed values.
- *Vulnerability to eroding incomes & standard of living*. As of 2013-2017, median household incomes for McMinnville are 14% below Yamhill County and 10% below statewide medians. Average wages for the McMinnville UGB are comparable to Yamhill County but below comparable regional, statewide and national figures.

---

[94] *MAC-Town 2032 Economic Development Strategic Plan. 2019. p.10.*

[95] Cited from www.mcminnville.org, as of September 2012.

As is occurring statewide and nationally, wages are now accounting for less than a 50% share of total personal income. Yamhill County residents also are more dependent on transfer payments than is the case regionally or nationally.

Future prosperity may be jeopardized to the extent that non-wage sources of income are subject to changing federal policies and the status of national/global investment markets – combined with social service needs for those dependent on transfer payments. Improving the ratio of wage to non-wage income will be influenced directly through the combination of providing more jobs and better paying job opportunities locally.

- *Tentative integration of Latino population into community & business leadership*. As noted with the 2007 MEDP Strategic Plan, in many communities with rapidly growing Hispanic populations, it has proven challenging to effectively draw Latinos into positions of community leadership and business ownership. The result can be lost opportunity for Latino business patronage and a more dynamic cultural environment that draws new blood, new ideas and new investment. A foundational strategy in the *MAC-Town 2032 Economic Development Strategic Plan* is to "improve systems for economic mobility and inclusion," with emphasis on training, resources, and support for underrepresented entrepreneurs and workers.
- *Inadequacy of commercial and industrial buildable land*. The 2001/03 and 2013 EOA processes all concluded that the McMinnville UGB would experience a deficit of buildable commercial land over a 20-year time horizon. The 2013 EOA resulted in a 36-acre deficit of commercial land for the 2013 to 2033 planning period, and the results in Chapter 5 show deficits of both commercial and industrial land for the 2021-2041 planning period.

McMinnville's Strengths, Weaknesses, Opportunities, and Threats

As part of the *MAC-Town 2032 Economic Development Strategic Plan*, McMinnville community members completed a SWOT analysis for economic development in McMinnville. It describes McMinnville's Strengths, Weaknesses, Opportunities, and Threats.

<table>
<tr>
<td>

Strengths

- High quality of life to boast about and attract investment
- Strong, widely-recognized downtown
- Robust wine and tourism economy, as well as cultural (e.g. Air and Space Museum) and recreational amenities that bring visitors
- Well known regionally and nationally as a destination for wine and food, with some supporting tourist assets
- Balanced employment across industry sectors
- Presence and involvement of postsecondary educational institutions (Linfield College and Chemeketa Community College)
- Location advantages:
- Good location in proximity to major metro area
- High quality soils in surrounding areas, climate suited for agriculture
- Natural environment assets nearby, including Yamhill River, access to the ocean and mountains
- Inexpensive power and water, with sustainable sources
- Major infrastructure assets: major highways, freight rail, airport
- Various parks and recreational assets
- Positive business climate perceptions and a sense of civic leadership

</td>
<td>

Weaknesses

- Relatively low educational attainment
- A limited labor pool for local companies and those looking to relocate
- Difficult access to and from I-5 and no near near-term possibility of a more direct connection
- End-of -the-line location for wine country visitors coming from the Portland area
- Lack of housing options
- Low levels of professional and office office-using employment
- Comparatively high poverty rates and low median household income

</td>
</tr>
<tr>
<td>

Opportunities

- Proximity to Portland allows McMinnville to capitalize on urban infrastructure and amenities
- Local airport has comparative advantages over other regional airports
- Highway 99 bypass : future completion will improve access to McMinnville
- A stronger framework for regional collaboration , improved opportunity in surrounding communities
- Opportunity sites for new downtown development
- New housing development – higher density , diversity of types, live live-work units
- Improved connections to the University of Oregon and Oregon State University
- Stronger branding and improved gateways into McMinnville
- Innovation in agriculture and food systems
- Wine -oriented makerspace
- Food hub
- $6M gift to Linfield College's wine program
- Expanded culinary and craft beverage retail offerings

</td>
<td>

Threats

- Limited land availability for residential, commercial and industrial development
- Regulatory challenges associated with UGB expansion
- Worsening housing affordability
- Brain drain due to local graduates leaving for other job markets
- Absorption of projected growth without detrimental impacts to character, congestion, affordability
- Future oversaturation of wine/tourism and increasing concentration of low-wage service industry jobs
- Need to find a sustainable solution to homelessness
- Future impacts of climate change on agriculture and related industries, including tourism

</td>
</tr>
</table>

Target Industries

The characteristics of McMinnville will affect the types of businesses most likely to locate in the city. McMinnville's attributes that may attract firms are: McMinnville's access to land and resources; recreational opportunities; and quality of life.

2013 Updated Cluster Targets

The 2013 EOA recommended a short list of cluster target industries, described as:

- **Advanced Manufacturing**. Corresponds to an industry cluster pivotal to the Oregon Business Plan and Business Oregon (the Business Development Department). In McMinnville, this cluster is exemplified by major McMinnville employers including Cascade Steel, Meggitt Polymers and Composites, NW Unmanned Aerial Systems, Betty Lou's, Inc., and Freelin-Wade Co. Also included are agricultural producers ranging from employers in the emerging breweries to small boutique wineries as in the Granary district which also serve to complement the Yamhill County Agri-Business Economic and Community Development Plan.
- **Healthcare/Traded Sector Services.** Aimed to facilitate continued competitiveness and future expansion of non-manufacturing businesses that serve area residents plus customers located beyond the immediate McMinnville/Yamhill County community. Willamette Valley Medical Center and associated health care facilities can be expected to continue to experience employment growth in the years ahead. Examples of traded sector service activities are diverse, ranging from Linfield College to Evergreen International Airlines to Oregon Mutual Insurance. Also included is a significant component of small firms as the export-focused portion of McMinnville's fast growing and entrepreneurial service business sector such as Precision Analytical, Hurst Berry Farms Corporate Headquarters, and NW Rapid Manufacturing.

MAC-Town 2032 Economic Development Strategic Plan Target Sectors

Furthermore, Goals 4-8 of the *MAC-Town 2032 Economic Development Strategic Plan* outline the "target sector goals and strategies," as well as potential tasks and projects, as follows:

- **4. Sustain and Innovate within Traditional Industry and Advanced Manufacturing**
    - 4.1 Ensure workforce availability in trades and other mid-skill positions.
        - Encourage expansion and allocate resources for middle, high school, and community and technical college programs that encourage career exploration and skills development in trades and mid-skill occupations
        - Convene a panel of business leaders from traditional industry and advanced manufacturing employers in McMinnville to pioneer a collaborative approach to expanding apprenticeships and volunteering employee time to teach in-demand skills to individuals evaluating trade-based careers.

- 4.2 Connect traditional industry and advanced manufacturing to innovation resources for sustainable growth.
  - Highlight industrial innovation in McMinnville through periodic events, posts and other marketing, connecting innovators through storytelling and innovation partnerships.
  - Plan and participate in an industrial innovation working group or recurring social event to facilitate idea sharing and cross-pollination among business leaders.
  - Connect business leaders with regional innovation resources through Business Oregon and other innovation-oriented organizations.
  - Consider an international sister city program to share innovative practices.
- 4.3 Expand and market land availability for industrial activities.
  - Promote and market the McMinnville Industrial Park as a target area for advanced manufacturing investment within Yamhill County.
  - Coordinate with McMinnville Industrial Promotion to ensure leadership succession and continued engagement.

- **5. Foster Opportunity in Technology and Entrepreneurship**
  - 5.1 Become a place where small and medium technology firms can relocate and grow.
    - Foster physical connections to existing tech and entrepreneurship hubs through low-cost air services.
    - Market McMinnville as a destination for young and aspiring employees to find opportunity in business, entrepreneurship, computer and software engineering and other programs in Oregon's post-secondary institutions.
    - Survey local "tech" employers to identify current regulatory shortcomings or infrastructural needs for business relocation and expansion.
    - Promote the concept of McMinnville's "tech terroir" to emphasize McMinnville's potential assets to entrepreneurs, business owners and others involved in tech-oriented occupations.
    - Explore opportunities to improve connections to and otherwise better leverage McMinnville's dark fiber ring for business use.
    - Hire an innovation officer and/or complete a comprehensive strategy around smart cities and innovation in urban sustainability.
    - Create an "Invest in the Future" grant program that is targeted towards private investment and business development with living wage job outcomes.

- 5.2 Provide opportunities for co-working, teleworking, and other arrangements enabled by telecommunications technology.
  - Collaborate to develop a coworking space to foster entrepreneurship, innovation and to enable convenient telecommuting to regional employers in Portland or elsewhere. Explore unique partnership opportunities for cooperative or pop-up telecommuting spaces.
- 5.3 Incubate new businesses and start-ups.
  - Maintain a list of funding sources for start-up and expansion grants for locally-owned businesses.
  - Coordinate with partners to improve access to funding and resources available through local foundations, non-profits and other funders in McMinnville to empower local capacity-building efforts.
  - Study the feasibility of aggregators or cooperatives to efficiently distribute locally-made products from McMinnville businesses to larger metropolitan markets.
- 5.4 Create new talent pipelines for tech-related occupations.
  - Connect business leaders with interested local educators to develop extracurricular activities and to improve current curricula and align education and training with emerging employer needs.
  - Cultivate relationships with post-secondary institutions to ensure awareness of job opportunities in McMinnville, and ensure that McMinnville job opportunities are represented on school job boards, in job fairs, and other promotional events.

- **6. Be a Leader in Hospitality and Place-Based Tourism**
  - 6.1 Make downtown the best it can be.
    - Evaluate current zoning, historical districts and designations, and existing land use patterns, including underutilized parcels, to ensure that key downtown parcels offer the highest and best use for their location.
    - Communicate with County officials to explore the potential for a purpose-built County facility, outside of downtown, that includes a courthouse, commissioners offices, and clerks office.
    - Continue to evaluate new downtown events to diversify downtown events and activities and publicize emerging retailers or other non-retail organizations.
    - Evaluate the feasibility of improving or expanding the provision of public restrooms in the downtown area.
  - 6.2 Become the preferred destination for wine-related tourism.

- Collaborate to expand marketing of McMinnville and Yamhill Valley products and to improve national and international recognition of local wine.
- Connect hoteliers and other hospitality professionals in Oregon and elsewhere to local opportunities for high-quality additions to McMinnville's current hospitality offerings.
- Collaborate with Travel Oregon to host a tourism workshop for McMinnville business owners to establish and leverage competitive advantages of over similar regional offerings.
- Leverage Linfield's wine studies program to identify opportunities to increase visitation to the Willamette Valley region and to the viticultural areas immediately surrounding McMinnville

- 6.3 Diversify tourism destinations beyond wine.
  - Create branded itineraries for a range of activities and distribute online and in hard copy throughout McMinnville and at local and regional airports to offer pre-planned adventures for visitors.
  - Optimize social media performance by continuing and expanding the use of hash tags, branded icons, slogans, and other techniques to highlight and encourage sharing of McMinnville-based experiences.
  - Conduct a feasibility study to identify the potential costs and economic and fiscal impacts of building an indoor sports complex for local recreation and regional event use.
  - Engage the Wings and Waves water park to identify and pursue opportunities for growth and expansion.
  - Become a national destination for bicycle tourism and other recreational and leisure activities.
- 6.4 Market and promote McMinnville.
  - Develop and maintain robust relationships with Travel Oregon, and seek promotion opportunities accordingly.
  - Document and track the economic impact of tourism and outdoor recreation to Yamhill Valley communities.
  - Work with visit McMinnville and local hoteliers to identify gaps in available conference space and to establish a plan to expand McMinnville's offerings for small and large conferences.

- **7. Align and Cultivate Opportunities in Craft Beverages and Food Systems**
  - 7.1 Maintain prominence in wine while looking for opportunities to innovate within supply chains, viticulture and production.

  - Convene a technical assistance panel to identify new opportunities in urban wine-making and distribution and to establish a framework for collaboration and innovation in wine-making that best leverages public and private resources and identifies critical public/private partnerships.
  - Expand programming at IPNC to include a technical component for knowledge sharing between wine-makers and other professionals in viticulture and oenology.
  - Encourage collaborative research at Linfield and Chemeketa CC and facilitate connections between these schools and other viticulture programs nationally.
  - Proactively recruit beverage-makers that complement existing wineries and breweries, such as cideries and distilleries.
- 7.2 Locate higher job-density food and beverage activities within McMinnville.
  - Ensure the sufficiency of regulations in applicable zones to accommodate urban wine-making and other non-retail aspects of the wine industry, including transportation and distribution.
  - Encourage further clustering of wine-oriented business in the Granary/ Alpine District.
  - Contact wineries throughout the region to identify growth-oriented operations needing new or larger space, and target marketing and recruitment efforts accordingly.
  - Recruit food processing and production companies that offer synergies with wineries, such as charcuterie and cheese companies.
  - Coordinate with educational institutions to anticipate needs and ensure that McMinnville remains a hub for wine education while expanding culinary education and training locally
  - Hire an Agriculture Coordinator or Resource Officer to connect producers with resources and coordinate efforts to innovate within wine and agriculture.
  - Convene a group of wine-makers and entrepreneurs to evaluate the feasibility of a wine maker-space or similarly collaborative wine-making space for small producers, experimental products, or research.
  - Conduct a feasibility study and potentially complete a business plan for an integrated food hub and permanent, year-round farmer's market.
  - In partnership with other Oregon cities and counties, commission a study of value-added industry successes and best practices related to agriculture in western U.S. and Canadian communities.

    - Liaise with researchers at OSU's Small Farms Program and other similar agricultural programs throughout the state and the region.
    - Invite educators in the region to conduct research and teaching based in the Yamhill Valley, including possible distance learning and online college course options.
    - Explore opportunities for expanded agricultural production using hydroponics, aquaponics and other similar cultivation methods
- 7.4 Open new markets for local agricultural products.
    - Establish a branding and marketing program for local agricultural products, such as "Yamhill County Grown" or similar.
    - Develop and market a local Farm-to-Table program by connecting Yamhill Valley farmers with local restaurants.
    - Explore the potential for a cooperative distribution model to move McMinnville's agricultural products to restaurants in the Portland metro.
- 7.5 Encourage a holistic approach to local food culture, improving connections to the local producers and cultivating a community of exceptional restaurants and culinary establishments.
    - Create a forum for local restaurateurs to connect with local agricultural producers and improve culinary offerings.
    - Work with stakeholders to establish a local demonstration or innovation kitchen that can be rented to test new recipes, host small events, or otherwise incubate local culinary endeavors.
    - Publicize local food offerings across all price levels through a branded guide to local cuisine, and distribute at and regional hotels, wineries, airports and other places frequented by travelers.
    - Partner on development of a "Farm-for-a-Day" agri-tourism program connecting local farming operations to paying guests.
    - Evaluate alignment of current food cart regulations with community goals.
- 7.6 Preserve natural assets while ensuring long-term stability in agricultural production.
    - Espouse an approach to environmental stewardship and encourage participation and support by local farmers for initiatives in keeping with this approach.
    - Establish and facilitate a business leadership group to identify solutions to sustainability challenges.

        - Establish local resiliency infrastructure and training through programs like FEMA's Community Emergency Response Teams (CERT) or other community-based models

- **8. Proactively Assist Growth in Education, Medicine and Other Sciences**
    - 8.1 Leverage institutional land assets and support planning for institutional growth and clustering.
        - Ensure that the Willamette Valley Medical Center can accommodate future growth through a master plan that includes supportive zoning, targeted capital improvements and other tools.
        - Use regulatory tools and constructive dialogue with businesses to encourage clustering of medical-professional uses near the Willamette Valley Medical Center and to create a regional anchor for health care.
        - Engage McMinnville's large institutions in a dialogue about proactive planning for large and underutilized land assets.
        - Assess the desirability and potential feasibility of the creation of a "university district" or similar near one or more of McMinnville's college campuses.
    - 8.2 Assist in recruitment and training to fill specific workforce needs.
        - Identify and fill gaps in education and training opportunities at local educational institutions for in-demand skills in "Eds and Meds" occupations.
        - Connect employers in education and health care to national skilled workforce pools through branding, recruitment, relocation incentives and other tools.
        - Explore public-private and other partnerships to improve amenities for students and employees, potentially including an expanded supply of student housing or housing appropriate for students on or near Linfield and Chemeketa campuses, and improved transportation to campuses and other institutions.
    - 8.3 Support the expansion of programmatic offerings at local institutions.
        - Work with Linfield College and Chemeketa CC to assess demand for education and training in health care and related services and to expand programming accordingly.
        - Engage Chemeketa CC leadership in a dialogue to explore the creation an on-site culinary and hospitality program.
        - Collaborate with leadership at the school district and at Linfield and Chemeketa to better engage Oregon's four-year public universities.

        - Connect local students with opportunities to work with OSU Extension, in labs or to participate in other UO and OSU programs prior to high school graduation.
        - Explore the creation of an aviation education program that leverages McMinnville's existing infrastructure and workforce assets.
        - Identify opportunities to bring programming offered at other Chemeketa Community College campuses to McMinnville, particular when serving established local industries.
        - Foster R&D opportunities for existing and emerging industries.
    - 8.4 Improve and expand connections between key institutions and the City of McMinnville.
        - Create safer and more intuitive physical connections to McMinnville from Linfield and Chemeketa, including better sidewalks, lighting and public transportation, particularly along Davis Street.
        - Proactively engage students in community events to improve dialogue between permanent residents and college attendees.

5. Forecast Employment and Land Needs

Goal 9 requires cities to prepare an estimate of the amount of commercial and industrial land that will be needed over a 20-year planning period. The estimate of employment land need and site characteristics for McMinnville is based on expected employment growth and the types of businesses that are likely to locate in McMinnville over the 5-, 10-, 20-, and 46-year periods. This chapter presents the buildable land inventory, analysis of target industries that build from recent economic trends, an employment forecast and associated land needs, and other land needs that aren't accounted for by the employment forecast.

EOA Update Process

The updated employment forecast and land needs estimates started with discussion of the assumptions used in the 2013 EOA. The project team conducted a detailed review of the 2013 assumptions and presented the assumptions, along with updated and new data to the Project Advisory Committee (PAC) for review and discussion during the September and October PAC meetings. The information generated considerable discussion at the PAC and ultimately resulted in PAC recommendations regarding the assumptions. The employment forecasts and land need estimates presented in this chapter reflect the PAC recommendations.

Buildable Lands Inventory

The buildable lands inventory is intended to identify commercial and industrial lands that are available for development for employment uses within the McMinnville UGB. The inventory is sometimes characterized as *supply* of land to accommodate anticipated employment growth. Population and employment growth drive *demand* for land. The amount of land needed depends on the type of development and other factors.

This chapter presents results of the commercial and industrial buildable lands inventory for the McMinnville UGB. The results are based on analyses of Yamhill County GIS property data and State of Oregon GIS employment data by ECONorthwest and reviewed by City staff. The remainder of this chapter summarizes key findings of the draft buildable lands inventory.

The general steps in the buildable lands inventory are:

1. Generate UGB "land base"
2. Classify lands by development status
3. Identify constraints
4. Verify inventory results
5. Tabulate and map results

A key step in the buildable lands analysis is to classify each tax lot into a set of mutually exclusive categories based on development status. For the purpose of this study, all commercial and industrial tax lots in the UGB are classified into one of the following categories and based on a tax lot's status as of January 2019:

- *Vacant land.* Vacant land is defined as tax lots either (a) Equal to or larger than one half-acre not currently containing permanent buildings or improvements; or (b) Equal to or larger than five acres where less than one half-acre is occupied by permanent buildings or improvements. This is consistent with OAR 660-009-005(14).
- *Vacant small lot.* The OAR 660-009-005(14) definition of vacant land does not include lots smaller than one half-acre. McMinnville has a meaningful number of developed sites with existing employment uses that are less than one half-acre. Remaining vacant lots (i.e., with no improvements) less than one half-acre are defined as vacant small lots.[96]
- *Partially vacant land.* Partially vacant land is defined as tax lots between one and five acres occupied by a use that could still be further developed based on the zoning. The final determination of partially vacant land was based on a visual assessment of aerial imagery and City staff verification.
- *Developed land*. OAR 660-009-0005(1) defines developed land as "Non-vacant land that is likely to be redeveloped during the planning period." Lands not classified as vacant, partially-vacant, or public or exempt are considered developed.
- *Public or exempt land*. Lands in public or semi-public ownership are considered unavailable for commercial or industrial development. This includes lands in Federal, State, County, or City ownership as well as lands owned by churches, institutions, and other semi-public organizations, and properties with conservation easements. Public lands were identified using the Yamhill County Assessment property tax exemption codes and City staff verification.

The next section provides a summary of the results of the commercial and industrial buildable lands inventory for the McMinnville UGB in both tabular and map formats. Appendix A. Buildable Lands Inventory presents the detailed methodology for developing the inventory.

[96] This development status classifications was added to the buildable lands inventory based on PAC recommendation at the February 27, 2020 meeting.

Buildable Lands Inventory Results

Exhibit 40 summarizes all land included in the employment land base (e.g., lands with plan designations that allow employment) in the McMinnville UGB. ECONorthwest used this land base in the buildable lands inventory for McMinnville. The land base includes traditional employment designations within the McMinnville UGB, which includes about 1,388 acres in 958 tax lots in total.[97]

Exhibit 40. Tax lots and total acres in employment land, McMinnville UGB, 2019
Source: ECONorthwest analysis of data from Yamhill County and City of McMinnville.

Zone/Plan Designation	Number of taxlots	Percent	Total taxlot acreage	Percent (total
Commercial	**708**	**74%**	**580**	**42%**
C-1 Neighborhood Business	1	0%	1	0%
C-2 Travel Commercial	3	0%	13	1%
C-3 General Commercial	641	67%	487	35%
O-R Office Residential	58	6%	12	1%
Commercial Plan Des.	4	0%	54	4%

M-2 General Industrial	199	21%	594	43%
M-L Limited Light Industrial	2	0%	115	8%
Industrial Plan Des.	6	1%	25	2%
Total	**958**	**100%**	**1,388**	**100%**

Development Status

Exhibit 41 shows commercial and industrial land in McMinnville by development status. Of the 1,388 total acres, about 857 acres (62%) are in classifications with no development capacity (or, "committed acres"). Of the remaining 532 acres, 111 acres (8%) are constrained and 421 acres (30%) are buildable land with development capacity. Appendix A. Buildable Lands Inventory provides more detail about the constraints associated with employment land, as recommended by the PAC.

[97] Note: the 2013 EOA reported a total acreage that included land with a public or semi-public (i.e., institutional) use. Since the 2020 update accounted for public and institutional land need separately, the resulting total acreage of employment land is lower.

Exhibit 41. Employment acres by classification and plan designation, McMinnville UGB, 2019
Source: ECONorthwest analysis of data from Yamhill County and City of McMinnville.

Zone/Plan Designation	Total acres	Committed acres	Constrained acres	Buildable acres
Commercial	**580**	**429**	**54**	**97**
C-1 Neighborhood Business	1	1	0	-
C-2 Travel Commercial	13	0	-	12
C-3 General Commercial	487	415	6	66

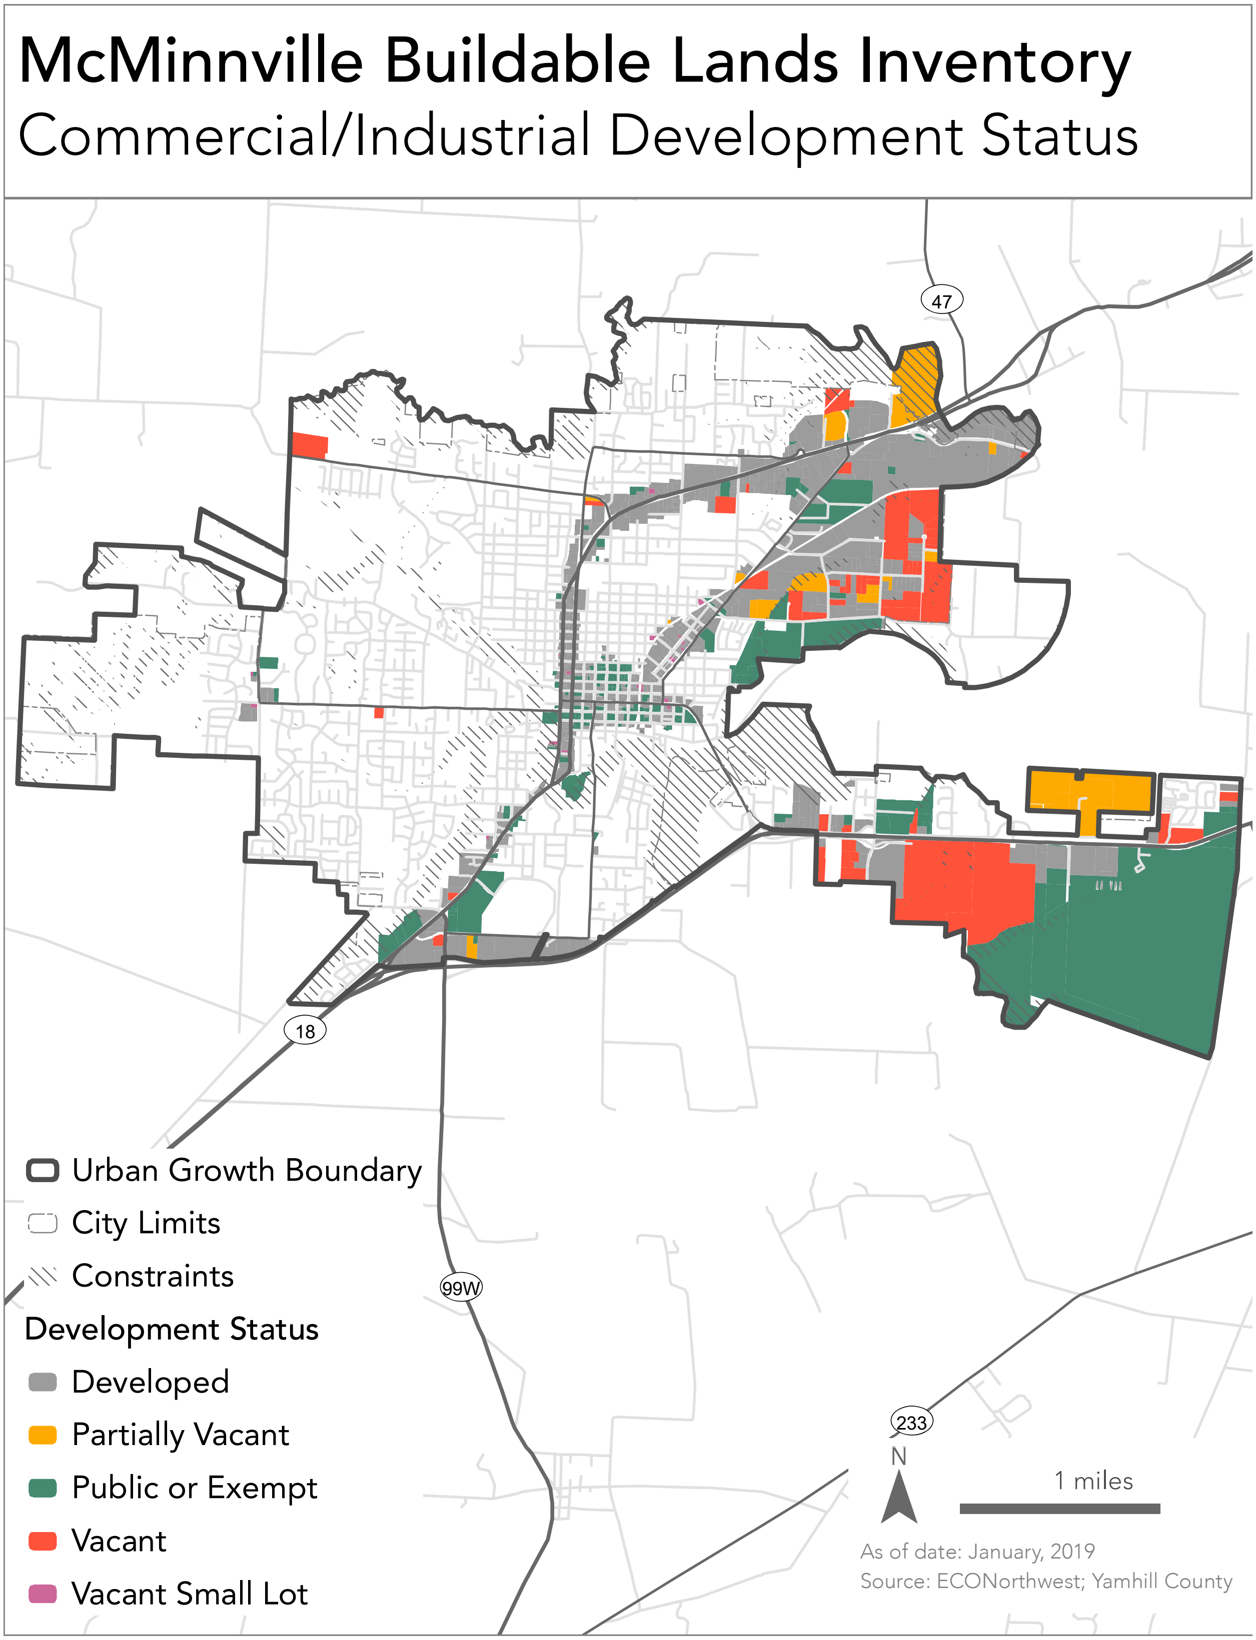
Total	**1,388**	**857**	**111**	**421**

Exhibit 42. Employment land by classification with development constraints, McMinnville UGB, 2019



Vacant Buildable Land

The next step in the commercial and industrial buildable land inventory was to net out portions of vacant tax lots that are unsuitable for development. Areas unsuitable for development fall into three categories: (1) developed areas of partially vacant tax lots, (2) areas with service constraints, (3) areas with physical constraints (areas with wetlands, floodways, floodplain, and steep slopes as summarized in Appendix A).

Exhibit 43 shows unconstrained buildable acres for vacant and partially vacant land by zone (or plan designation). The results show that McMinnville has about 421 unconstrained buildable acres in commercial and industrial designations. Of this, 23% (97 acres) is in commercial designations, and 77% (324 acres) is in industrial designations.

Also, in McMinnville, it is common that development applications include approvals for "Planned Developments" which may modify the underlying zoning regulations, and may include an associated master plan for a property. Permitted uses in zoning districts may be amended to include other uses on a portion of the property, or certain uses otherwise permitted in the underlying zoning may be precluded by the Planned Development overlay regulations. For example, while the Evergreen property is zoned C-3 General Commercial, it is subject to a Planned Development overlay that restricts uses to certain tourism-related uses.

Exhibit 43. Employment land with unconstrained development capacity (vacant and partially vacant) by plan designation, McMinnville UGB, 2019
Source: ECONorthwest analysis of data from Yamhill County and City of McMinnville.

Zone/Plan Designation	Total buildable acres	Buildable acres on vacant lots	Buildable acres on partially vacant

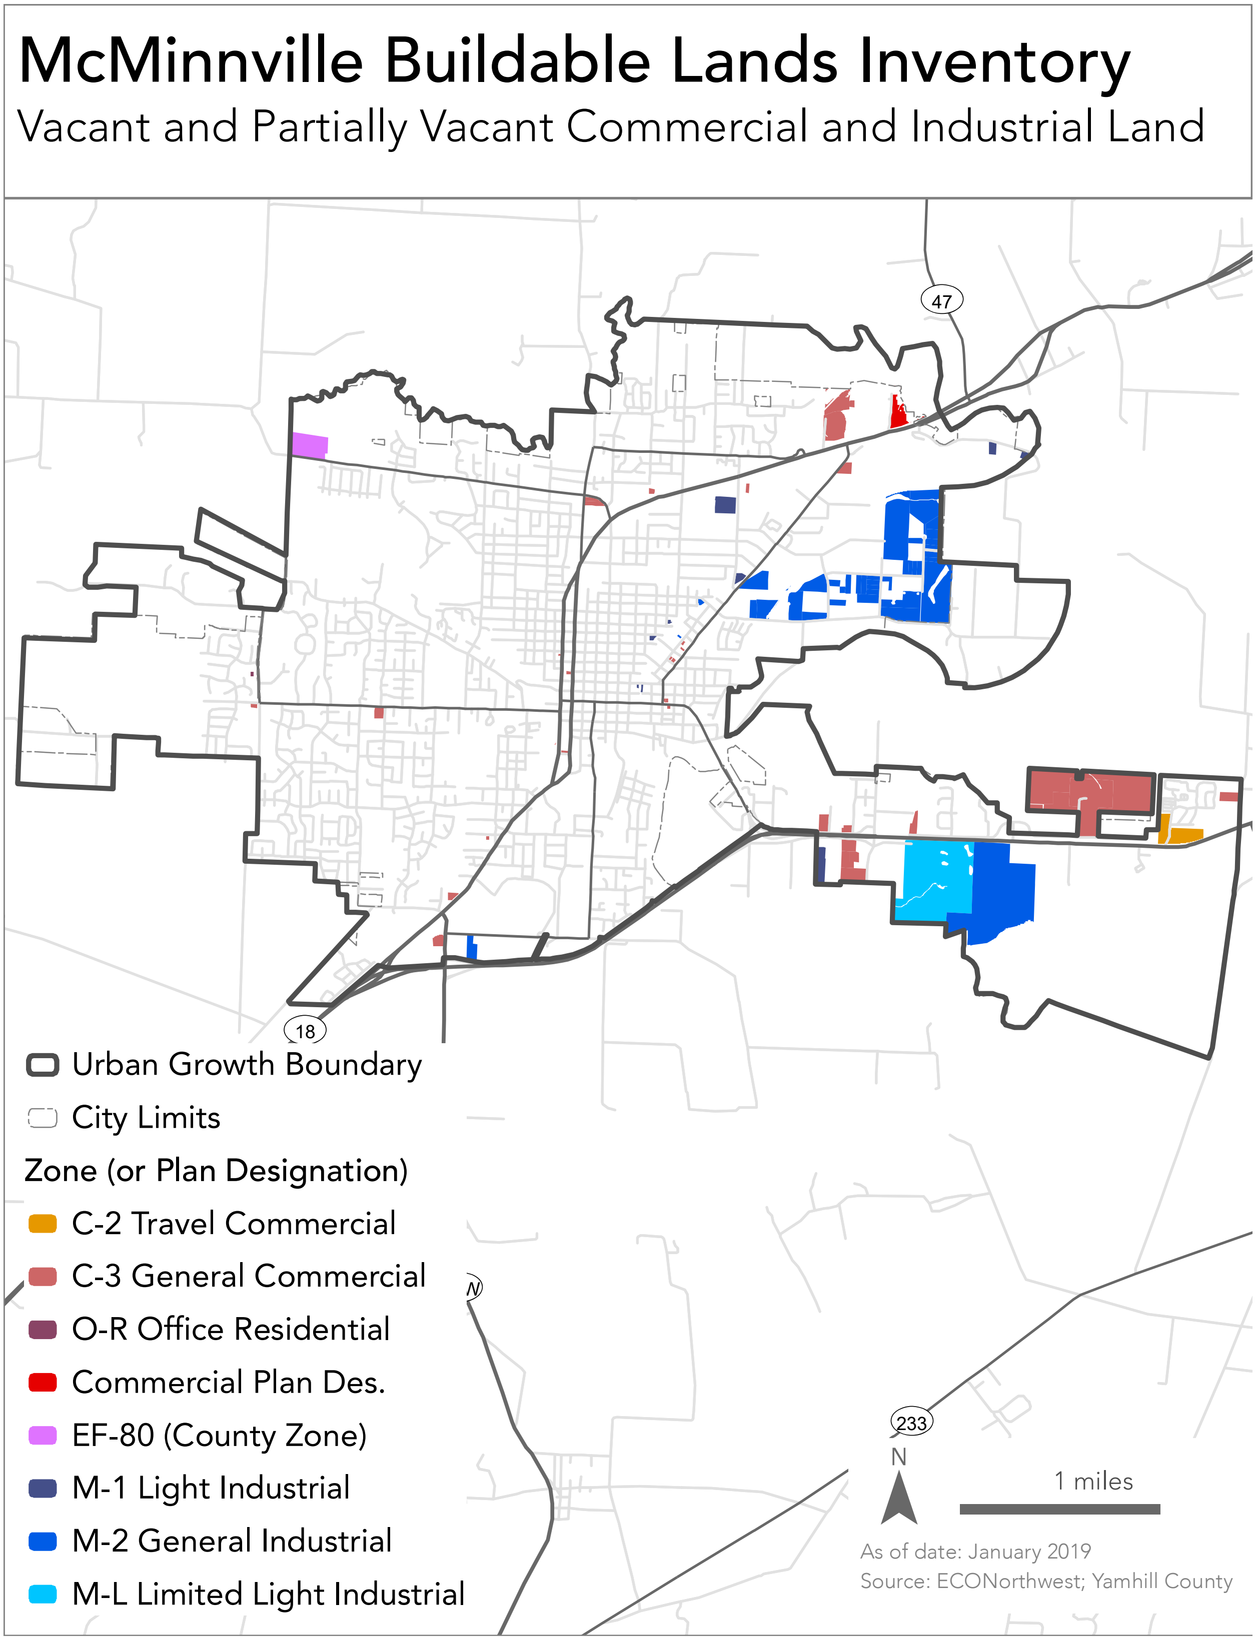
Exhibit 45. Buildable employment land by zone with development constraints, McMinnville UGB, 2019



Forecast of Employment Growth and Commercial and Industrial Land Demand

Demand for industrial and commercial land will be driven by the expansion and relocation of existing businesses and by the growth of new businesses in McMinnville. The employment projections in this section build off of McMinnville's existing employment base, assuming overall future growth is similar to Yamhill County's long-term historical employment growth rates.

The employment forecasts do not take into account a major change in employment that could result from the location (or relocation) of one or more large employers in the community during the planning period that would account for a substantial portion of the overall forecast. Such a major change in the community's employment would exceed the growth anticipated by the city's employment forecast and its implied land needs (for employment, but also for housing, parks, and other uses). Major economic events, such as the successful recruitment of a very large employer, are difficult to include in a study of this nature. The implications, however, are relatively predictable: more demand for land (of all types) and public services.

The 2013 EOA defined the process of projecting demand for industrial and commercial land as a series of 10 steps. The table below outlines these steps and identifies the recommendations, if applicable, decided by the PAC during meetings held between July and November of 2019. Generally, the PAC started with a discussion of the assumptions used in the 2013 EOA, and reviewed alternatives for the 2020 update.

Exhibit 46. Steps to project demand for commercial and industrial land in McMinnville

Step	Purpose	Options	Recommended Option
Step 1. Set Forecast Time Period	Establish the 20-year planning period; select a base year	2021-2041 with adjustments to account for 2019-21	The state requires a 20-year planning period; 2021-41 is used for consistency with the Housing Needs Analysis
Step 2. Population Forecast	The population forecast does not serve a direct purpose other than being the basis for one of the safe harbor employment forecast methods.	Use the required PSU forecast.	State policy allows no flexibility in this process.
Step 3. Evaluate UGB Employment Trend	Inform allocations of employment to land use types.	This is an analytical step and does not require assumptions.	
Step 4. Evaluate and Select Job Forecast	Develop a 20- and 46-year employment forecast.	Option 1 (low-growth, 1.13%): OED safe harbor method Option 2 (medium-growth, 1.36%): PSU safe harbor population forecast Option 3 (high-growth, 1.70%): Non-safe harbor method used as the baseline in the 2013 EOA.	Option 2
Step 5. Allocate Job Growth by Land Use Type Scenarios	Allocate jobs to land using land use types.	Option 1: 2013 EOA Method Option 2: Four land use types (service commercial, retail, industrial, govt) Option 3: Five land use types (the four above plus a tourism category).	Option 3
Step 6. Allocate Job Growth by Land Development Status	This step makes deductions for employment that will not require vacant land.	Option 1: 17% (per 2013 EOA) Option 2: Alternative assumption justified by PAC.	5% for all land use types
Step 7. Apply Job Density Factors	Analyze existing job densities to inform density factors (expressed in employees per acre – EPA)	Option 1: use factors from the 2013 EOA Option 2: use modified factors based on analysis	11 employees per acre for industrial land use type 23 employees per acre for commercial land use types
Step 8. Estimate 20-Year Employment Land Demand	Apply all of the assumptions to the land demand model to estimate 20- and 46- year land demand.	No options – this is an analytical step	n/a
Step 9. Estimate Additional Land Need Not Determined in Forecast	This step accounts for other types of employment land need including other needed sites and retail leakage.	Option 1: Do not assume additional need Option 2: Provide findings and analysis that supports additional land needs.	Option 2.
Step 10. Compare Land Demand to Supply	Compare land need to the supply as documented in the buildable land inventory. Conduct one further step of assessing land suitability.	No options – this is an analytical step	n/a
Step 11. Evaluate Policy Options and Objectives	This update will not include a top to bottom review of policy options and objectives – those were assessed in the 2013 EOA and in the 2019 EDSP. Some modifications may be required to reflect changing conditions.		

Employment Base for Projection

This section addresses Step 1: Set Forecast Time Period, Step 2: Population Forecast, and Step 3: Evaluate UGB Employment Trend.

The purpose of the employment projection is to model future employment land need for general employment growth. The forecast of employment growth in McMinnville starts with a base of employment growth on which to build the forecast. Exhibit 47 shows ECONorthwest's estimate of total employment in McMinnville in 2017.

To develop the figures, ECONorthwest started with estimated covered employment in the McMinnville UGB from confidential Quarterly Census of Employment and Wages (QCEW) data provided by the Oregon Employment Department. Based on this information, McMinnville had about 14,964 covered employees in 2017.

Covered employment, however, does not include all workers in an economy. Most notably, covered employment does not include sole proprietors. Analysis of data shows that *covered* employment reported by the Oregon Employment Department for Yamhill County is only about 76% of *total* employment reported by the U.S. Department of Commerce.[98] We evaluated this ratio for each industrial sector for Yamhill County and used the resulting ratios to determine the number of non-covered employees. This allowed us to determine the total employment in McMinnville. Exhibit 47 shows McMinnville had an estimated 20,990 *total* employees within its UGB in 2017.

The PAC approved the use of the covered to total employment ratios shown in Exhibit 47.

[98] **Covered** employment includes employees covered by unemployment insurance. Examples of workers not included in covered employment are sole proprietors, some types of contractors (often referred to as "1099 employees"), or some railroad workers. Covered employment data is from the Oregon Employment Department.

Total employment includes all workers based on date from the U.S. Department of Commerce. Total employment includes all covered employees, plus sole proprietors and other non-covered workers.

Exhibit 47. Estimated total employment by sector, McMinnville UGB, 2017

Sector	Generalized Land Use Type	Covered Employment	Estimated Total Employment	Covered % of Total
Agriculture, Forestry, and Mining	Industrial	356	356	100%
Construction	Industrial	585	852	69%
Manufacturing	Industrial	2,277	2,549	89%
Wholesale Trade	Industrial	127	180	71%
Retail Trade	Retail Commercial	2,170	2,842	76%

Forecast growth rates

This section addresses Step 4: Evaluate and Select Job Forecast.

The employment forecast covers the 2021 to 2067 period, with increments of 5, 10, 20, and 46-years. This forecast requires an estimate of total employment for McMinnville in 2021. While there is no required method for employment forecasting, OAR 660-024-0040(9) sets out some optional "safe harbors"[99] that allow a city to determine employment land need. The PAC evaluated three options for the forecast, including use of two safe harbors from OAR 660-024.

- **Low-growth scenario (1.13%).** The low-growth option uses the safe harbor that allows a city to base their employment forecast on regional employment projections from the Oregon Employment Department (OED).[100] The regional employment projection for the

[99] A safe harbor is an assumption that a city can use in a housing needs analysis that the State has said will satisfy the requirements of Goal 14. OAR 660-024 defines a safe harbor as, "… an optional course of action that a local government may use to satisfy a requirement of Goal 14. Use of a safe harbor prescribed in this division will satisfy the requirement for which it is prescribed. A safe harbor is not the only way or necessarily the preferred way to comply with a requirement and it is not intended to interpret the requirement for any purpose other than applying a safe harbor within this division."

[100] OAR 660-024-0040(9) states: "The following safe harbors may be applied by a local government to determine its employment needs for purposes of a UGB amendment under this rule, Goal 9, OAR chapter 660, division 9, Goal 14 and, if applicable, ORS 197.296.

(a) A local government may estimate that the current number of jobs in the urban area will grow during the 20-year planning period at a rate equal to either:

(A) The county or regional job growth rate provided in the most recent forecast published by the Oregon Employment Department; or

Mid-Valley Area (Linn, Marion, Polk, and Yamhill Counties) for the 2017 to 2027 period shows that employment will grow at an average annual growth rate of 1.13%.

- **Medium-growth scenario (1.36%).** The medium-growth option is another safe harbor, based on the rate of growth from the current population projections from Portland State University.[100] The coordinated population forecast for the McMinnville UGB between 2021 and 2041 shows that population will grow at an average annual growth rate of 1.36%, and long-term average annual growth rate between 2021 and 2067 of 1.19%.
- **High-growth scenario (1.70%).** The high-growth option aligns with the moderate (referred to as "baseline") forecast rate used in the 2013 EOA. The 2013 EOA evaluated low, moderate, and high growth alternative scenarios. At the time the 2013 EOA was completed, the OED forecast for the Mid-Valley region was the "low-growth" scenario at 1.5%, and the "high-growth" scenario of 1.9% was based on the OED forecast for the Portland metro area. This option does not conform to the safe harbors in OAR 660-024-0040(9) and would require substantial evidence as a factual basis for choosing a non-safe harbor growth rate. Examples of substantial evidence to justify a non-safe harbor growth rate include adopted and relevant economic development policies or site needs considerations.

Exhibit 48 shows employment growth in McMinnville between 2021 and 2041, as well as 2021 and 2067, based on the average annual growth rate of each forecast scenario. The estimated number of employees for the beginning of the planning period is extrapolated from the estimate of total employment in 2017 from Exhibit 47 (20,990 employees), using the appropriate forecast rate for each scenario.

For the 2021 to 2041 period, the low-growth scenario would result in an increase of 5,544 employees; an increase of 6,885 employees in the medium-growth scenario; and an increase of 9,003 employees in the high-growth scenario.

(B) The population growth rate for the urban area in the appropriate 20-year coordinated population forecast determined under rules in OAR chapter 660, division 32.

Exhibit 48. Employment growth scenarios, total employment, McMinnville UGB, 2021–2067

Year	Low-growth (based on OED forecast)	Medium-growth (based on PSU population forecast)	High–growth (based on 2013 EOA moderate forecast)
2021	21,957	22,157	22,454
2026	23,228	23,708	24,429
2031	24,573	25,367	26,577
2041	27,501	29,042	31,457
2067	36,853	38,158	48,759
Change 2021 to 2041			
Employees	5,544	6,885	9,003
Percent	25%	31%	40%
AAGR	1.13%	1.36%	1.70%
Change 2021 to 2067			
Employees	14,896	16,001	26,305
Percent	68%	72%	117%
AAGR	1.13%	1.19%	1.70%

Source: ECONorthwest

The PAC recommended using the medium-growth option (1.36% AAGR) for the employment forecast for the 2021-2041 planning period. The results of the employment forecast presented in the EOA reflect this growth rate.

Allocation to land use types

This section addresses Step 5: Allocate Job Growth by Land Use Type Scenario

The next step in forecasting employment is to allocate future employment to broad categories of land use. Firms wanting to expand or locate in McMinnville will look for a variety of site characteristics, depending on the industry and specific circumstances. For example, small retail stores may look for an existing space in a shopping center in an area with high visibility for attracting customers, while a new food product manufacturer may need a mid-sized site of 5 to 10 acres in an area with direct access to a state highway.

At direction from the PAC, ECONorthwest grouped employment into five broad proposed categories of land use based on North American Industrial Classification System (NAICS): industrial, retail commercial, office and commercial services, tourism services, and government.[101] This approach differs from the 2013 EOA, which defined three land use types—commercial, industrial, and institutional. The primary difference in the proposed updated categories is a separation of different types of commercial land into retail, office, and tourism commercial. Some of these land use types might have different site needs considerations, and these land use types better align with the City's economic development goals, such as a focus on tourism-related employment. This was based on identifying commercial sub-types associated with the target industries in the Economic Development Strategy, to assess whether land needs

[101] The generalized land use type categories are defined by the NAICS sectors listed in Exhibit 47.

might differ for these commercial sub-types. ECONW informed the PAC that the sub-types could ultimately be recombined at the end of the analysis if the differentiation didn't prove useful. Ultimately, the three commercial subtypes were recombined into a single commercial category, as the employment sectors didn't necessarily correlate to distinct land uses that would be differentiated through zoning. For example, the NAICS codes included in the tourism category included food and beverage, which are typically permitted in the same zones as retail commercial.   Ultimately, the land uses almost exclusively related to destination tourism uses that weren't consistent with the employment density factors were instead addressed as other needed sites and that is addressed in more detail in the respective section in this chapter.

Exhibit 49 shows the expected share of employment by land-use type in 2021 and the forecast of employment growth by land-use type in 2041 in the McMinnville UGB, and Exhibit 50 shows employment growth for all growth increments. The PAC recommended the future share of land use types will align with both projections from the Oregon Employment Department (OED) for the Mid-Valley Area, as well as economic development goals and policies as stated in the *MAC-Town 2032 Economic Development Strategic Plan* and Three Mile Lane Area Plan.

OED projects that in the 2017 to 2027 period, the share of future employment in industrial sectors will increase; the share of retail commercial as well as government employment will decrease; and the share of office and commercial services and tourism services will increase.[102] These trends closely align with McMinnville's future economic development goals, though the *MAC-Town 2032 Economic Development Strategic Plan* estimates growth in office employment, as well as an emphasis on tourism-related services, advanced manufacturing (i.e., industrial), and food and beverage manufacturing target industries.

The values highlighted in green in Exhibit 49 show the future share of total new employment for each land use type in 2041, based on the information summarized above. **The green highlighted percentages in the 2041 "% of Total" column are assumptions recommended by the PAC.**

Exhibit 49. Forecast of employment growth by land use type, McMinnville UGB, 2021–2041

	2021		2041		Change
Land Use Type	Employment	% of Total	Employment	% of Total	2021 to 2041

Estimate of Demand for Commercial and Industrial Land

The next step in the employment forecast is to estimate the demand of commercial and industrial land.

The estimate of demand for commercial and industrial land included three components: (1) employment forecast and employment density assumptions, with deduction for employment that won't require vacant employment land, (2) recapture of existing retail leakage, and (3) other needed sites which are not accounted for in the average employment density factors; these are target industries and uses in the *MAC-Town 2032 Economic Development Strategic Plan*. In addition, employment for public/institutional uses was backed out of the employment forecast and land needs were calculated separately.

The employment forecast includes all new employment in the McMinnville UGB. Some of this employment, however, will not be located on vacant commercial or industrial land. Other lands that will accommodate new employment growth include residential land and redevelopment sites. Another factor in estimating the demand for commercial and industrial land is consideration for employment density, or employees per acre. Appendix B provides additional background information developed for the PAC to make recommendations for new employment on vacant commercial and industrial land, as well as employment density. Government employment was also backed out of the forecast because government land need was addressed as part of the public/institutional land need process.

The next section describes the approach for (1) estimating employment on vacant commercial and industrial land with considerations for employment on redevelopment sites, and (2) estimating employees per acre by land use type.[103]

[103] Note: the government land use type is excluded from the remaining employment forecast calculations, as we account for government employment in calculations for other land needs. Deductions for private education were also made in the office and commercial services category, based on employment reported (IPEDS data) for Linfield College of 360 employees. Adjustments for future employment at Linfield assumed the share of Linfield employment would remain the same.

Employment that does not require vacant commercial and industrial land

This section addresses Step 6: Allocate Job Growth by Land Development Status

Some employment growth in McMinnville will not require vacant (or partially vacant) employment land over the planning period. This includes redevelopment of areas with existing employment, where redevelopment increases the intensity of employment uses (i.e., more employees are accommodated on the same amount of land). The 2013 EOA assumed that 17% of employment for each land use type would not require vacant commercial or industrial land.[104] **Based on the information presented in Appendix B, the PAC determined that a reasonable assumption would be 5% refill/redevelopment for both commercial and industrial employment.**

Exhibit 51 shows the estimate of employment on vacant commercial and industrial land by land use type for each scenario, using the 5% assumption for employment that will occur through redevelopment, refill, or on non-employment sites. The table (reading left to right) starts with the number of new employment growth calculated over the planning period; then calculates the amount of employment that does not require vacant employment land based on 5% of the new employment growth; and results in the amount of new employment growth on vacant industrial and commercial land. From this point in the analysis forward, the commercial land use types (i.e., retail commercial, office and commercial services, and tourism services) were combined as the land needs for these land use types overlap.

Exhibit 51. Estimate of employment on vacant land by land use type, McMinnville UGB, 2021–2041

Land Use Type	New Employment Growth	Emp. on Other Land	New Emp. on Vacant Land
Industrial	1,667	83	1,584
Commercial	4,998	249	4,749
Total	**6,665**	**332**	**6,333**

Source: ECONorthwest Note: As described above, government employment is calculated separately and is not included in Exhibits 45-48.

Exhibit 52. Estimate of employment on vacant land by land use type, McMinnville UGB, 2021–2026, 2021–2031, 2021–2041, and 2021–2067

Land Use Type	Employment on Vacant Land			
	5-year (2021-2026)	10-year (2021-2031)	20-year (2021-2041)	46-year (2021-2067)
Industrial	396	792	1,584	3,403
Commercial	1,187	2,373	4,749	10,756
Total	**1,582**	**3,165**	**6,333**	**14,159**

Source: ECONorthwest

[104] The 2013 EOA used a 17% assumption, based on a PAC recommendation. The 2001/03 EOA assumed 14-17%, depending on the land use type. This EOA updated used 5% based on empirical analysis that showed refill and redevelopment rates didn't achieve employment densities that would be associated with 17% refill/redevelopment on employment land.

Employment density

This section addresses Step 7: Apply Job Density Factors and Step 8: Estimate 20-Year Employment Land Demand.

This section shows the resulting demand for vacant (including partially vacant) land in McMinnville over the 20-year period, accounting for potential variations in employment density. The assumptions about employment density are based on the 2013 EOA, as stated in text excerpt below. Based on information provided in Appendix B, the PAC recommended using an employment density of 11 employees per acre for industrial employment and 23 employees per acre for commercial employment (i.e., retail commercial, office and commercial services, and tourism services). Further explanation of employment density and the conversion of net to gross acres is provided below.

- **Employment density.** Employees per acre is a measure of employment density based on the ratio of the number of employees per acre of employment land that is developed for employment uses. Employment densities factor in all employment on a site, whether full or part time or different shifts in a workday. Thus, employment at a given site may overrepresent the number of employees at a site at a specific time. For example, retail service locations often have many part-time employees who work different shifts. Despite the potential for overestimating the number of employees on site at a given time, the data do provide a reasonable estimate of total employment on a site and therefore total employees per acre, and this is reflected in the analysis of historic employment density, too.
- **Conversion from net-to-gross acres**. The data about employment density is in *net* acres, which does not include land for public right-of-way.[105] Future land need for employment should include land in tax lots needed for employment plus land needed for public right-of-way. One way to estimate the amount of land needed for employment, including public right-of-way, is to convert from *net* to *gross* acres based on assumptions about the amount of land needed for public right-of-way.[106] A net-to-gross conversion is expressed as a percentage of gross acres that are in public right-of-way.

Based on empirical evaluation of McMinnville's existing net-to-gross ratios, ECONorthwest uses a net-to-gross conversion factor of 6% for industrial and 18% for commercial, retail, and tourism.

Using these assumptions, the forecasted growth of 6,333 new employees between 2021 and 2041 will result in the following demand for vacant (and partially vacant) employment land: 153

[105] The 2013 EOA does not describe a method for converting net to gross acres.

[106] OAR 660-024-0010(6) uses the following definition of net buildable acre. "Net Buildable Acre" consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads. While the administrative rule does not include a definition of a gross buildable acre, using the definition above, a gross buildable acre will include areas used for rights-of-way for streets and roads. Areas used for rights-of-way are considered unbuildable.

gross acres of industrial land and 252 gross acres of commercial land (Exhibit 53). Exhibit 54 shows the demand for vacant land to accommodate employment growth in the 5-, 10-, 20-, and 46-year planning periods.

Exhibit 53. Demand for vacant land to accommodate employment growth, McMinnville UGB, 2021–2041

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,584	11	144	153
Commercial	4,749	23	206	252
Total	**6,333**		**351**	**405**

Total	**101**	**202**	**405**	**899**

Source: ECONorthwest

Estimated Land Need 2019-2021

The buildable lands inventory (BLI) shows employment land status as of January 2019, while the forecast of need for employment land begins in 2021. We estimated land needed for employment between 2019 and 2021 using the same assumptions as the other planning periods. McMinnville employment in 2019[107] was about 21,566 employees, resulting in an increase of 591 employees between 2019 and 2021. About 496 of these 591 employees will require vacant commercial or industrial land. Using data on vacant unconstrained land from Exhibit 43, Exhibit 55 shows that McMinnville has supply of 324 gross acres of industrial land and 97 gross acres of commercial land. Between 2019 and 2021, the McMinnville UGB has a demand for 11 gross acres of industrial land and 20 gross acres of commercial land. This results in a surplus of 313 gross acres of industrial and 77 gross acres of commercial land as of 2021. These values are used as the land supply in the land sufficiency calculations starting in 2021.

[107] 2019 total employment was extrapolated from the 2017 Quarterly Census of Employment and Wages, using the methods described in the "Employment Base for Projection" section. We assumed the 20-year growth rate of 1.36%.

Exhibit 55. Comparison of the capacity of unconstrained vacant land with employment land demand by land use type, McMinnville UGB, 2019-2021

Land Use Type	Land Supply (Suitable Gross Acres)	Land Demand (Gross Acres)	Land Sufficiency (Deficit)
Industrial	324	11	313
Commercial	97	20	77

Retail Leakage

In 2018, the city of McMinnville initiated development of a plan for the Three Mile Lane Area Plan (3MLAP). The project updates the 1981 Three Mile Lane Overlay District (amended in 1994) and the 1996 Highway 18 Corridor Refinement Plan. The 3MLAP will integrate a wide range of land uses and a multi-modal transportation system that serves both local and state transportation needs and provides active connectivity within the plan area as well as to the City's downtown core. Leland Consulting Group performed the market analysis for the project.

The project analyzed a market area that represents the area from which the most demand for residential, commercial, and industrial uses will originate, and where most of the competitive development is located. The market area (shown in Exhibit 6 and Exhibit 38) is roughly bounded by the Willamette River to the east, Tillamook State Forest to the west, and Polk County to the south—although the market does extend into Polk County, there are few residents or jobs located in this area—and the City of Yamhill to the north. The study includes a retail leakage analysis, with the express intent that the city would capture some of the retail spending that is occurring in the larger Salem, Portland, and I-5 corridor markets.[108]

Leland characterizes retail leakage as follows:

> "Retail sectors in which household spending is not fully captured are called "leakage" categories, while retail categories in which sales are higher than estimated household demand generated by existing residents are called "surplus" categories. A retail sales surplus indicates that a community pulls consumers and retail dollars in from outside the trade area, thereby serving as a regional market. Conversely, when local demand for a specific product is not being met within a trade area, consumers are going elsewhere to shop, creating retail leakage."[109]

The study reports overall demand for 529,000 square feet of retail space in the study area for a 10-year period (Table ES-3, pg 4). The study also shows a breakdown of the 10-year demand broken out by demand from household growth, leakage recapture, and replacement space (Figure 38, pg 51). Data provided by Leland show that the leakage

---

[108] Note: As discussed in Chapter 3, while retail environments are changing at a national level, the extent to which e-commerce will replace all types of retail is unclear and unlikely. The need for certain types of retail will persist both nationwide and in places like McMinnville.

[109] McMinnville Three Mile Lane Area Plan: Market Analysis, Leland Consulting Group, April 2019.

recapture component of the 10-year demand is 131,808 square feet. This is an element of retail land need that is not reflected in the employment forecast.

Exhibit 56 shows an estimate of land needed to accommodate recapture of retail leakage. The analysis builds from the Leland estimates and assumes 470 square feet per employee. The square feet per employee assumption comes from Metro's Employment Density Study (pg 17). Dividing recapturable existing leakage by square feet per employee provides an estimate of the amount of employment generated by the space; dividing that by the PAC approved assumption of 23 employees per acre yields the land need assumption. The results show that McMinnville needs an additional 12.2 acres of land to accommodate recapture of retail leakage.

Exhibit 56. Demand for Regional Commercial and Office Space

Sector	Recapture-able Existing Leakage (s.f.)	SF/Emp	Employees (20 years)	Employees Per Acre (EPA)	Acres
Furniture & Home Furnishings	6,257	470	13	23	0.6
Electronics and Appliance	4,450	470	9	23	0.4

Land Needs Not Addressed in the Average Employment Densities (Other Needed Sites)

This section addresses Step 9: Estimate Additional Land Need Not Determined in Forecast

Statewide planning Goal 9 requires cities to "Provide for at least an adequate supply of sites of suitable sizes, types, locations, and service levels for a variety of industrial and commercial uses consistent with plan policies."[110] McMinnville has identified several employment land needs that have other needed sites. These related to target industry sectors identified in the *MAC-Town 2032 Economic Development Strategic Plan*. These are addressed in the respective subsections below, describing these land needs and the factual basis for each need.

Other Needed Sites Calculated Separately from Average Employment Densities

The City's Economic Development Strategic Plan provides the City's economic development opportunities, vision, and strategy. The City need not be bound by history and past trends, but

[110] https://www.oregon.gov/lcd/OP/Documents/goal9.pdf

can rather seek to achieve the community's economic vision, supported by data, and realistically achievable given competitive advantage, as supported by data and emerging trends.

Statewide Planning Goal 9 states that comprehensive plans for urban areas shall: "Provide for at least an adequate supply of sites of suitable sizes, types, locations, and service levels for a variety of industrial and commercial uses consistent with plan policies." This indicates that cities have some degree of flexibility in determining land needs as long as (1) they are consistent with plan policies, and (2) are justifiable. The land needs described in this section are all identified in existing city plans, but are not considered in the employment forecast.

The needs analysis also needs to account for these other needed sites for uses anticipated as part of the Economic Development Strategy. Below are some examples of other needed sites in McMinnville and other Oregon communities:

- For example, when McMinnville's UGB was established in the early 1980s, it wasn't anticipated that there would be a need for a large site for the Evergreen Museum or water park. These facilities occupy approximately 70 acres of their sites. These have substantial economic benefits to the McMinnville economy. In 2018, they had over 88,000 visitors. They also require large sites, differ from traditional employment uses, don't fit neatly within an employment density assumptions, and they consume a significant amount of the land supply in the UGB.
- Another example of a needed site for tourism is the US Cellular Park in Medford. The park is 132 acres with 15 sports fields. The 2018 Annual Report shows that in 2018 it generated $11.5 million estimated economic impact, surpassing $100 million cumulative local economic impact since its inception in 2008, helping to sustain 110 jobs in the local economy based on the direct spending of visiting teams.[111]
- The City of Redmond is expanding its UGB to add nearly 949 acres for several employment uses. This allows the Deschutes County Fair and Expo Center to build out and become more of a regional player (with an additional 120 acres), while providing a new home for the Oregon National Guard's Redmond Armory (approximately 40 acres). It also provides nearly 700 acres for large industrial projects.[112]
- The Allison Inn and Spa in Newberg takes advantage of place-based tourism. It is on a 35 acre site in the City of Newberg. It is situated adjacent to rural land with surrounding views of wine country and farmland. It includes accommodations, restaurant and bar, spa and meeting and event center. This could be considered an adaptation of one of the

prototypes described in the agri-tourism plan described below, but adapted for an urban location interfacing with a rural setting, rather than located in a rural location.

- Over a decade ago, a County-wide plan was undertaken related to agri-tourism. It identified six prototype projects, each with specific assumptions about characteristics. These were predominantly rural prototypes, but the opportunities for these prototypes haven't been realized.[113]

The Economic Development Strategic Plan identifies 57 items that potentially have site-related needs. Based on further review and discussions, we assume the approximately 47 other items not included in the list of ten site needs below would be addressed through traditional sites needs within the standard site needs and average employment density calculations. Exhibit 57 summarizes the land needs for these other needed sites. (Appendix C. provides a detailed version of this table.)

Exhibit 57. Land needs identified in the MAC-Town 2032 Economic Development Strategic Plan (EDSP): Other needed sites not reflected in average employment density calculations

Use	Description or Example*	Land Need	Total Employment Adjustment (Source)	EDSP or Other Reference
1. Community Center/Recreation Facility	Update, improve, expand and add recreational facilities that serve the community's needs (Community Center and Aquatic Center).	10 acres	22 employees (Source: Parks Director)	3.2.2
2. Outdoor Stage/ Amphitheater	Britt, Jacksonville Cuthbert, Eugene Bi-Mart, Central Point Les Schwab, Bend	5 acres plus parking	30 employees (Source: Britt Festival - 2,200 seating capacity)	3.2.1.
3. See Ya Later Foundation – Champions Center	The Champions Center is planned as a youth and family recreational and educational complex.	28 acres (4 acres for buildings, 6 acres for parking, 12 acres for 6 athletic fields, 6 acres for associated facilities)	20 employees (Source: See Ya Later Foundation Proposal)	See Ya Later Foundation UGB Application
4. Arts and culture focused event center	Chehalem Cultural Center, Newberg)	3.5 acres	15 employees (Source: Chehalem Cultural Center)	3.3
5. Evergreen Aviation and Space Museum	Support existing facilities; based on facilities in master plan	27 acres	57 employees (Source: Evergreen Master Plan)	3.3
6. Wings and Waves	Opportunities for growth and expansion	Location-specific land need at existing partially vacant site	*Included in Evergreen Master Plan, see above*	6.3.
7. Conference Center:	40,000 sf conference space, accommodation, and parking:	5 acres	13 employees (Source: Feasibility Analysis)	6.4
8. Equestrian center with supporting commercial activity inside UGB	Would include facilities that cannot be developed on EFU land	20 acres in UGB, larger footprint outside	80 employees (Source: Comparable feasibility studies)	(6.3)
9. Food hub and public market	Focused on local craft foods & beverages	3.5 acres	13 employees (Source: USDA Regional Food Hub Resource Guide)	3.2.2.
10. Makerspace/innovation hub/ fabrication center	Supports local innovation & entrepreneurial ecosystem	2 acres	3 employees (Source: Talent Maker City)	6.3.
TOTAL		**104 acres**	**253 employees** 253 employees @ 23 emp/acre = 11 acres 104 acres – 11acres = **<u>net increase of 93 acres</u>**	

*Additional examples are provided in the following narrative.

1. COMMUNITY CENTER/RECREATION FACILITY

Strategy 3.2.2 of the MAC-Town 2032 EDSP seeks to cultivate partnerships to develop and market McMinnville's recreation amenities. A specific action in that section is to add recreational facilities that serve the community's needs including a Community Center and Aquatic Center.

The McMinnville Parks Department is in the process of completing a feasibility analysis for a facility and is currently estimating demand of 10 acres. Further information is expected to be available in February 2020.

This is consistent with other examples reviewed by ECONorthwest. ECONorthwest reviewed characteristics of comparable community centers. These include two facilities run by the Salvation Army (Kroc centers in Salem and Coeur d'Alene), and three city-managed facilities in Eugene, Portland, and Federal Way Washington. Exhibit 58 provides a summary of the facilities.

Exhibit 58. Community Center Characteristics

Facility	Facility Size (sq ft)	Site Size (acres)	Description
Salem Kroc Center	91,500	22.0	LEED certified with a waterpark (including a Jr. Olympic competition pool, water slide, lazy river, hot tub, and splash pad), Fitness Center, Gymnasium, Game Room, Art Studio, Library/Media Center, Amphitheater, Chapel/Performing Arts Center, 4000 ft^2 of Event Space
Coeur d'Alene Kroc Center	132,000	12.0	Competition and leisure pools, health and wellness center, gym and climbing wall, game room, and classrooms
East Portland Community Center	45,000	5.7	Full-size gymnasium with retractable bleachers Transverse bouldering wall Fitness center with cardiovascular and circuit strength equipment Exercise studio with sprung wood floor and mirrors Multi-purpose, and poolside rooms Outdoor courtyard Indoor 4-lane Pool Indoor zero-depth entry leisure pool with current channel, waterslide, splashdown
Federal Way Community Center	72,000	10.0	Aquatics center, three gyms, fitness center, climbing pinnacle and Splash Café
Eugene Amazon Community Center	n/a	12.0	Outdoor pool, two community centers with many amenities, parking

Based on information from the Parks Department, and consistent with review of comparable facilities, the land need for this use is assumed to be 10 acres.

2. OUTDOOR STAGE/AMPHITHEATER

Strategy 3.2.1 of the MAC-Town 2032 EDSP seeks to update City Plans to evaluate and prioritize investments in recreation infrastructure. The strategy specifically identifies the desire to "add an outdoor stage or amphitheater to one of McMinnville's existing parks." The following list provides capacity and site sizes for amphitheaters in other Oregon cities.

- Les Schwab Amphitheater, Bend ~8,000 capacity ~5 acres plus parking (parking co-located with other uses)
- Bi-Mart Amphitheater, Central Point: ~6,000+ total capacity (~1985 fixed seats plus lawn), (parking co-located with other uses); ~5+ acres, plus parking & other support areas
- Britt Festival, Jacksonville: 2,200 total capacity (1,000 fixed seating plus lawn), parking co-located with other uses); Approximately 4 acres plus parking, (includes main stage, small stage, concession buildings, seating, staging area)
- Cuthbert Amphitheater, Eugene: 5,000 total capacity; parking co-located with Alton Baker Park; Approximately 4.3 acres without patron parking (includes main stage, seating, concession areas, and performer/equipment parking).

Based on review of comparable facilities, the land need for this use is assumed to be 5 acres. Assume shared parking, otherwise additional land will be needed for dedicated parking.

Note: This is calculated separate from the See Ya Later Foundation Champion Center. While that facility proposed an amphitheater. That site plan identified an amphitheater, but the concept is a different facility than what is identified in the Economic Development Strategic Plan. The Champion center would rely on use of two athletic fields for area comparable to above facilities ranging from 2,200-8,000 capacity (plus parking).

3. SEE YA LATER FOUNDATION-CHAMPIONS CENTER

In 2015, the See Ya Later Foundation (SYLF) proposed a UGB amendment for a sports complex which was not further pursued at that location given access constraints. The Foundation is still moving forward with the concept and envisions a 165,000 sf indoor recreational and educational building with the following amenities:

- Six athletic fields
- Sport fields, court gyms, fitness equipment
- Art, music, technology, and mentoring
- Outdoor amphitheater and regulation sports courts (for large-scale events, drawing visitors and dollars to McMinnville year-round)
- Meeting rooms and facilities for use by non-profits and social service organizations
- Non-denominational prayer room
- Great hall for events, commercial kitchen, coffee shop, variety of meeting facilities
- Parking (shared for uses)

To accommodate these facilities, SYLF requires a 28-acre site that meets specific suitability requirements and is accessible to the school-aged children it is intended to serve. A year-round site on the west side of McMinnville is preferred - recognizing that Joe Dancer Park is closed from November to March, and the west side is rapidly growing with two additional planned schools.

Based on the 2015 application, we a assume a land need of 28 useable acres (4 acres for buildings, 6 acres for parking, 12 acres for 6 athletic fields, 6 acres for associated facilities (walkways, landscaping, bleachers, campus open space, and driveways).

Note: The ESDP identifies needs for regional athletic events and an indoor sports complex. These uses are assumed as part of a single site complex as represented in the Se Ya Later Foundation Champions Center described above. Therefore, these are not calculated separately. Other examples of these types of facilities of various scale and scope include the following:

- Facility for regional athletic events: 132 acres (US Cellular Park, Medford), 15 sports fields: 3 full-size baseball, 7 softball/baseball, 5 soccer/football

- Separate indoor sports complex: 5-8 acres

4. ARTS AND CULTURE FOCUSED EVENT CENTER

Strategy 3.3 (Leverage arts and culture amenities) of the MAC-Town 2032 EDSP identifies the desire for an arts and culture focused center. Specifically, the plan states "Initiate a conversation between local artists, arts organizations, philanthropies and other parties to identify the potential for an arts and culture-focused event center in McMinnville." The strategy also includes the need for a community art space "Evaluate the feasibility of a public private partnership to create a community art space or collaborative studio and cooperative gallery." Following is a summary of similar cultural centers:

- Chehalem Cultural Center, Newberg – is located in a historic building and houses a fine arts gallery and exhibition hall, three multipurpose arts studio classrooms, a state-of-the-art clay studio, a recording studio with four music practice studios, meeting space, and a 5,200 square foot grand ballroom for public and private events.

Based on review of comparable facilities, the land need for this use is assumed to be 3.5 acres.

5. OPPORTUNITIES TO SUPPORT EVERGREEN AVIATION AND SPACE MUSEUM

This opportunity is identified as part of Strategy 3.3 – Leverage arts and culture amenities. Specifically, the project is to establish periodic, formal dialogue with the Evergreen Aviation and Space Museum to anticipate their needs and identify opportunities to provide support.

This expansion is consistent with the adopted Evergreen Master Plan and would build out about 27 additional buildable acres of the property (with constrained areas left intact –wetlands, ravine, etc.) The master plan also includes an adventure course and associated features that extend would outside the UGB. The use of the site is limited by the Planned Development Ordinance to the master plan unless the PD Ordinance is amended.

This opportunity assumes expansion onto ownership of partially vacant land of 27 acres. This deduction is included as part of the other needed sites since a portion of the site (27 acres) was inventoried as vacant in the buildable lands inventory.

6. WINGS AND WAVES OPPORTUNITIES FOR GROWTH AND EXPANSION

This opportunity is related to Strategy 3.3 and is part of McMinnville's overall tourism strategy. The Waterpark was bought by The Falls Event Center in 2017, and is now run as a separate organization.

This opportunity assumes expansion onto ownership of partially vacant land.

7. CONFERENCE SPACE

This opportunity relates to Strategy 6.4 – Market and promote McMinnville. The plan includes a project to "Work with visit McMinnville and local hoteliers to identify gaps in available conference space and to establish a plan to expand McMinnville's offerings for small and large conferences." Towards that end, Visit McMinnville retained Johnson Consulting to complete a market analysis for conference facilities. The January 2018 report, titled *McMinnville Conference Center and Destination Analysis*, identifies need for a 40,000 sq ft conference space not including accommodations and parking. We looked at the following comparable facilities:

- Washington County Event Center: 89,000 sf; ~8 acres with parking
- Seaside: 25,000 sf, 10 meeting rooms; 4 acres with parking
- Pendleton: 28,000 sf, 9 meeting rooms; 12.5 acres with parking
- Blair County Convention Center, PA. 2 levels, ~50,000 sf; 11 acres with parking
- Blue Water Convention Center, MI: ~40,000 sf; 12 acres

Based on review of comparable facilities, the land need for this use is assumed to be 5 acres.

8. EQUESTRIAN CENTER

In 2012, developer JW Millegan proposed a major equestrian center in Yamhill County. The concept was not further pursued, due in part to restrictions on EFU lands. As proposed, the facility would require approximately 325 acre and would include a gallop track, polo fields, steeplechase facilities, plus resort, RV park, distillery, brewpub, and cobblestone plazas. In effect, this would be a rural/urban interface tourism use with supporting commercial activity inside UGB.

Due to land use restrictions, elements such as resort, RV park, distillery, brewpub, would need to be sited within the UGB at a location interfacing with rural lands.

Other equestrian facilities in the region include:

- Hunter Creek Equestrian Park, 14441 SW Wilsonville Rd, Wilsonville, (120 ac site)
- Wilsonville Equestrian Center, 24040 SW 8nd Avenue, Tualatin
- Swan Training/Whip 'n Spur, 16091 SW Wilsonville Rd

- Arbor Grove Equestrian Center, 7359 Hwy 219 NE, Woodburn

An example of an RV Park near McMinnville includes:

- Willamette Wine Country RV Park and the Vintages are 191 sites on 14.5 acres

Based on the facility concept, and review of comparable facilities, the portion of the land need within the UGB for this use is assumed to be 20 acres.

9. CRAFT FOOD AND BEVERAGE FOOD HUB/FARMERS MARKET

McMinnville wants to develop an integrated food hub and year-round farmers market. Farmers markets are physical retail marketplaces intended to sell foods directly by farmers to consumers. Food hubs offer a combination of aggregation, distribution, and marketing services at an affordable price. Food hubs make it possible for many producers to gain entry into new larger-volume markets that boost their income and provide them with opportunities for scaling up production. Combining food hubs and farmers markets creates opportunities to better integrate local food value chains. Examples of farmers markets and food hubs include:

- Olympia Farmers Market, Olympia WA - supports local sustainable agriculture by connecting the public with local farmers, artisans, and other producers in an economically viable marketplace, has over 100 vendors and an estimated 400,000 visitors per year; 4.7 acres
- Bellingham Farmers Market, Bellingham WA – promotes and encourages the development of local, small scale agriculture and ensure a market balance for small, local growers and has over 100 vendors and is co-located at a transit station in downtown Bellingham; 1.5 acres
- Fallon Food Hub Co-op, Fallon NV – has the mission of educate residents about the benefits of eating seasonally and healthfully in order to create a thriving and expanding local food scene resulting in increased opportunities for area producers; 2.2 acres
- Catskills Food Hub, Sullivan County NY – a non-profit organization working to strengthen local agriculture, increase access to fresh food, and improve health outcomes for Sullivan County and the region; 2.7 acres
- Puget Sound Food Hub, Mt. Vernon WA – supports the relationship between regional farmers and their customers, enabling a values-based supply chain for food safety and transparency; 3.2 acres

Based on review of comparable facilities, the land need for this use is assumed to be 3.5 acres.

10. MAKERSPACE/INNOVATION HUB/ FABRICATION CENTER

Most industrial land demand is already reflected in the employment forecast. McMinnville wants to develop additional strategies to bolster the local maker community and the entrepreneurial ecosystems. Makerspace and fabrication laboratories are strategies that communities are pursuing. Makerspaces are community-operated, often nonprofit, workspaces where people with common interests, such as computers, machining, technology, science, digital art, or electronic art, can meet, socialize and collaborate. CraterWorks Makerspace, located in Central Point, also includes a commercial kitchen and market space. It is about 2 acres in size.

Based on review of comparable facilities, the land need for this use is assumed to be 2 acres.

Site Characteristics and Needed Sites

OAR 660-009-0015(2) requires the EOA to "identify the number of sites by type reasonably expected to be needed to accommodate the expected [20-year] employment growth based on the site characteristics typical of expected uses." The Goal 9 rule does not specify how jurisdictions conduct and organize this analysis.

The rule, OAR 660-009-0015(2), states that "[i]ndustrial or other employment uses with compatible site characteristics may be grouped together into common site categories." The rule suggests, but does not require, that the City "examine existing firms in the planning area to identify the types of sites that may be needed." For example, site types can be described by: (1) plan designation (e.g., heavy or light industrial), (2) general size categories that are defined locally (e.g., small, medium, or large sites), or (3) industry or use (e.g., manufacturing sites or distribution sites). For purposes of the EOA, McMinnville groups its future employment uses into three general categories based on land use types: (1) commercial (includes retail commercial, office & commercial services, and tourism services)[114]; (2) industrial; and (3) sites needed to meet specific economic development objectives (e.g., other land needs not addressed in the employment forecast as discussed above).

In short, in addition to estimating the acreage needed to accommodate current and future employment, it is necessary for the city to determine if it has sites with characteristics suitable for the development to address needs and opportunities. This includes site size, topography, access, utilities, and other characteristics such as location and proximity to other uses and amenities.

As a first step, ECONorthwest analyzed the size distribution of developed employment sites in McMinnville by land use type. Exhibit 59 shows the results. The majority of commercial lots are small – 88% of commercial lots are less than 1 acre, and 42% of the commercial land (in acres) is in lots less than 1 acre. No developed commercial lots are larger than 20 acres. (Some shopping centers include multiple tax lots).

[114] At early stages of the EOA, McMinnville broke commercial out into separate land use categories, but found that many overlap and do not have distinct site needs from other commercial categories by NAICS sector.

Industrial sites show a different pattern. Seven industrial sites (about 2 percent of all industrial sites) are greater than 10 acres but account for 25% of all industrial land in acres. While McMinnville has 122 industrial sites less than 1 acre, those sites account for only 7% of developed industrial land (in acres). Some industrial users occupy multiple buildings and/or tax lots.

Exhibit 59. Size distribution of developed employment sites by land use type, McMinnville UGB, 2019

Land Use Type	<0.50 acre	0.50-0.99 acres	1.00-1.99 acres	2.00-4.99 acres	5.00-9.99 acres	10.00-19.99 acres	20.00-25.00 acres	25.01-49.99 acres	50.00+ acres	Total
	Developed acres size									
Commercial										
Acres	96	54	57	90	26	34	-	-	-	357

Tax Lots	509	80	41	30	4	3	-	-	-	667
Percent of Tax Lots	**76%**	12%	6%	4%	1%	0%	0%	0%	0%	100%
Industrial										
Acres	12	19	43	87	91	61	25	-	79	417
Percent of Acres	3%	4%	10%	**21%**	22%	15%	6%	0%	19%	100%
Tax Lots	96	26	32	29	13	5	1	-	1	203
Percent of Tax Lots	**47%**	13%	16%	14%	6%	2%	0%	0%	0%	100%

In addition to basic logistical considerations, there are workforce considerations for locating within a community. For example, in the Three Mile Lane study, it was found that employers located to the area because there were sites that hand land needed for expansion; however, employees preferred to be in amenity-rich locations. Employers have had to adjust business practices to accommodate employees in these locations absent the presence of amenities, such as those which were available in prior locations before relocating to accommodate space needs. This largely illustrates the need for the city's growth management strategy of balanced land uses that provide for a nearby mix of uses and opportunities to reduce vehicle miles travelled.

For certain development types, there is a standardized taxonomy and these types have specific site characteristic needs. The City's economic development vision and strategy may deviate from some of these typical prototypes in order to promote an authentic place-based experience, but the real estate principles must still function properly. Exhibit 60 and Exhibit 61 show taxonomies for industrial and commercial categories. The site characteristics for commercial and industrial uses shown in the exhibits equate to characteristics that are both "necessary" and "typical" for the target industries identified in the City's MAC-Town 2032 Economic Development Strategic Plan.

It should be noted that certain development types need larger sites that must be planned and located all at one time, even if future phases within the development build out over time. Therefore, those sites need to be accounted for up-front, rather than incrementally. Other land uses have needs that don't fit into these broad categories but have other programmatic needs that define the site needs. Examples of these other needed sites apply to uses such as convention/ conference space, regional athletic facilities, etc. For those facilities identified in the Economic Development Strategy that have special sites needs that aren't sufficiently accounted for in the land needs calculated by the employment forecast and employment density, site characteristics have been separately described below.

Exhibit 60. Shopping Center Taxonomy, ICSC

ICSC

U.S. Shopping-Center Classification and Typical Characteristics*

Type of Shopping Center	Concept	Typical GLA Range (Sq. Ft.)	Acres	# of Anchors	% Anchor GLA	Typical Number of Tenants	Typical Type of Anchors	Trade Area Size
General-Purpose Centers								
Super-Regional Mall	Similar in concept to regional malls, but offering more variety and assortment.	800,000+	60-120	3+	50-70%	N/A	Full-line department store, mass merchant, discount department store, fashion apparel store, mini-anchor, cineplex or other large-scale entertainment attraction, and food-and-beverage service cluster	5-25 miles
Regional Mall	General merchandise or fashion-oriented offerings. Typically, enclosed with inward-facing stores connected by a common walkway. Parking surrounds the outside perimeter.	400,000-800,000	40-100	2+	50-70%	40-80 stores	Full-line department store, mass merchant, discount department store, fashion apparel store, mini-anchor, cineplex or other large-scale entertainment attraction, and food-and-beverage service cluster	5-15 miles
Community Center ("Large Neighborhood Center")	General merchandise or convenience-oriented offerings. Wider range of apparel and other soft goods offerings than neighborhood centers. The center is usually configured in a straight line as a strip, or may be laid out in an L or U shape, depending on the site and design.	125,000-400,000	10-40	2+	40-60%	15-40 stores	Discount store, supermarket, drug, large-specialty discount (toys, books, electronics, home improvement/furnishings or sporting goods, etc.)	3-6 miles
Neighborhood Center	Convenience-oriented.	30,000-125,000	3-5	1+	30-50%	5-20 stores	Supermarket	3 miles
Strip/Convenience	Attached row of stores or service outlets managed as a coherent retail entity, with on-site parking usually located in front of the stores. Open canopies may connect the storefronts, but a strip center does not have enclosed walkways linking the stores. A strip center may be configured in a straight line, or have an "L" or "U" shape. A convenience center is among the smallest of the centers, whose tenants provide a narrow mix of goods and personal services to a very limited trade area.	< 30,000	<3	Anchor-less or a small convenience-store anchor.	N/A	N/A	Convenience store, such as a mini-mart.	<1 mile
Specialized-Purpose Centers								
Power Center	Category-dominant anchors, including discount department stores, off-price stores, wholesale clubs, with only a few small tenants.	250,000-600,000	25-80	3+	70-90%	N/A	Category killers, such as home improvement, discount department, warehouse club and off-price stores.	5-10 miles
Lifestyle	Upscale national-chain specialty stores with dining and entertainment in an outdoor setting.	150,000-500,000	10-40	0-2	0-50%	N/A	Large-format upscale specialty	8-12 miles
Factory Outlet	Manufacturers' and retailers' outlet stores selling brand-name goods at a discount.	50,000-400,000	10-50	N/A	N/A	N/A	Manufacturers' and retailers' outlets	25-75 miles
Theme/Festival	Leisure, tourist, retail and service-oriented offerings with entertainment as a unifying theme. Often in urban areas, they may be adapted from older—sometimes historic—buildings, and part of a mixed-use project.	80,000-250,000	5-20	Unspecified	N/A	N/A	Restaurants, entertainment	25-75 miles
Limited-Purpose Property								
Airport Retail	Consolidation of retail stores located within a commercial airport.	75,000-300,000	N/A	N/A	N/A	N/A	No anchors; retail includes specialty retail and restaurants.	N/A

##	SPECIAL CONSIDERATIONS:		Adequate distance from sensitive land uses (residential, parks, large retail centers) necessary. High throughput of materials. Large yard spaces and/or buffering required. Often transportation related requiring marine/rail links.	Acreage allotment includes expansion space (often an exercisable option). Very high utility demands in one or more areas common. Sensitive to vibration from nearby uses.	May require high volume/supply of water and sanitary sewer treatment. Often needs substantial storage/yard space for input storage. Onsite water pre-treatment needed in many instances.	Surrounding environment of great concern (vibration, noise, air quality, etc.). Increased setbacks may be required. Onsite utility service areas. Avoid sites close to wastewater treatment plants, landfills, sewage lagoons, and similar land uses. Lower demands for water and sewer treatment than Production High-Tech Manufacturing.	Adequate distance from sensitive land uses (residential, parks) necessary. Moderate demand for water and sewer. Higher demand for electricity, gas, and telecom.	High diversity of facilities within business parks. R&D facilities benefit from close proximity to higher education facilities. Moderate demand on all infrastructure systems.	Relatively higher parking ratios may be necessary. Will be very sensitive to labor force and the location of other similar centers in the region. High reliance on telecom infrastructure.	Transportation routing and proximity to/from major highways is crucial. Expansion options required. Truck staging requirements mandatory. Minimal route obstructions between the site and interstate highway such as rail crossings, drawbridges, school zones, or similar obstacles.	Transportation infrastructure such as roads and bridges to/from major highways is most competitive factor.	Must be located witihn or near FAA-regulated UAV testing sites. Moderate utility demands. Low reliance on transportation infrastructure.	Larger sites may be needed. The 25 acre site requirement represents the more typical site. Power delivery, water supply, and security are critical. Surrounding environment (vibration, air quality, etc.) is crucial. May require high volume/supply of water and sanitary sewer treatment.	Located in more remote locations in the state. Usually without direct access (within 50 miles) of Interstate or City of more than 50,000 people.

Mackenzie; Business Oregon

Terms:

More Critical ↑ Less Critical	**'Required'** factors are seen as mandatory in a vast majority of cases and have become industry standards
	'Competitive' significantly increases marketability and is *highly recommended by Business Oregon* . May also be linked to financing in order to enhance the potential reuse of the asset in case of default.
	'Preferred' increases the feasibility of the subject property and its future reuse. Other factors may, however, prove more critical.

* Competitive Acreage: Acreage that would meet the site selection requirements of the majority of industries in this sector.

**Total Site: Building footprint, including buffers, setbacks, parking, mitigation, and expansion space

† Data Center Water Requirements: Water requirement is reported as gallons per MWh to more closely align with the Data Center industry standard reporting of Water Usage Effectiveness (WUE).

‡ Data Center Sewer Requirements: Sewer requirement is reported as 200% of the domestic usage at the Data Center facility. Water and sewer requirements for Data Centers are highly variable based on new technologies and should be reviewed on a case-by-case basis for specific development requirements.

MACKENZIE.

Current Revision Date: 6/23/2015

To meet the requirements of OAR 660-009-0015(2) to identify the number of needed sites by type, we analyzed the existing distribution of developed sites by size (Exhibit 59) and applied it to overall land need for the 2021-2041 period. Exhibit 62 summarizes needed sites by size class. Exhibit 63 allocates needed sites to target sizes within those size class ranges consistent with the methodology in the Industrial Sites Information memorandum distributed at the February 27, 2020 PAC meeting.[115] This was based on the range and distribution of site sizes for larger industrial sites described in the MEDP letter (Appendix D. Site Need Letters). These tables also include the estimates for the smaller site sizes of 0.5-2.0 acres discussed in the Employment Sites memo, consistent with the tables labeled "Need 2" in that memo, which was supported by the PAC. Exhibit 62 and Exhibit 63 now also incorporate smaller site sizes less than 0.5 acres, as described in the buildable lands inventory methodology.

Needed Industrial Sites Provide for at Least an Adequate Supply

Goal 9 and ORS 197.712(2)(c) specify that Comprehensive Plans for urban areas shall: …"Provide for at least an adequate supply of sites of suitable sizes, types, locations, and service levels for a variety of industrial and commercial uses consistent with plan policies."

The employment forecast and employment density factors identified a need for 153 industrial acres. The needed sites identified above in Exhibit 63, appropriately located, would provide for at least an adequate supply of sites of suitable sizes for a variety of industrial uses consistent with plan policies, as required by Goal 9. To be competitive, this would assure there would be a

[115] https://www.mcminnvilleoregon.gov/sites/default/files/fileattachments/planning/page/1675/7-industrial_sites_narrative_summ_2-26-2020_letterhead.pdf

supply of available of sites with a variety of sizes and characteristics to meet a variety of needs at any given time during the planning period.

Note: MIP/MEDP Input re: Size Class Distribution – Size Assigned. Appendix D. Site Need Letters provides letters from MIP and MEDP stating needed site sizes.

Exhibit 64 provides a detailed summary of the needed sites between 5 and 50 acres listed in Exhibit 63. The sites listed in this table are identified based on industries listed in the IFA matrix (Exhibit 61) and the target sectors identified in McMinnville's 2019 Economic Development Strategic Plan. The results of Exhibit 63 and Exhibit 64 show that McMinnville needs 384 acres for industrial land over the 20-year period.

Land Sufficiency

This section addresses Step 10: Compare Land Demand to Supply

Exhibit 65 shows commercial and industrial land sufficiency within the McMinnville UGB. It shows:

- **Vacant or partially vacant unconstrained land** from Exhibit 55 within the UGB. Exhibit 65 shows that McMinnville will have 313 gross acres of industrial land, and 77 gross acres of commercial land in 2021.
- **Demand for commercial and industrial land** from Exhibit 53, which shows McMinnville will need a total of 153 gross acres for industrial uses and 252 gross acres for commercial uses over the 2021-2041 period based on portion of demand determined through the forecast.
- **Retail Leakage** Additional needs, addressed previously in this Chapter, include retail leakage that is current demand that predates the employment forecast associated with new population growth (12-acre demand over the 20-year period)
- **Demand for commercial land needs with other needed sites** not adequately accounted for in the average employment density calculations. Forecast commercial land includes land use types of retail commercial, office and commercial services, and tourism services. These uses for other needed sites for target sectors are identified in the Economic Development Strategic Plan (104-acre demand over the 20-year period), a net difference of 93 additional acres after adjusting for associated employment.
- **Needed site sizes** from Exhibit 63 shows that McMinnville has an overall need for 384 acres of industrial land in site sizes between less than 0.5 acres and up to 50 acres in size.

Exhibit 65 shows that McMinnville has:

- A 70-acre deficit of industrial land in 2041
- A 280-acre deficit of commercial land in 2041.

Exhibit 65. Comparison of the capacity of unconstrained vacant land with employment land demand by land use type, McMinnville UGB, 2021-2041

Land Use Type	Land Supply (Suitable Gross Acres)	Demand (Gross Acres)	Land Sufficiency (Deficit)
Industrial	**313**	**384**	**(70)**
Commercial	**77**	**357**	**(280)**
Forecast		*252*	
Retail leakage		*12*	
Other needed sites		*93*

Summary of Land Sufficiency for Employment Land in McMinnville

This section summarizes the analysis completed in Chapter 5 and the findings related to land sufficiency for employment land in McMinnville.

The current EOA update bring the 2013 document to the current 20-year planning period of 2021-2041, incorporating new trend and forecast data, and ensuring the City's land use planning documents provide the land use foundation to support the City's newly adopted economic development strategy, and ensure the Comprehensive Plan supports that strategy. It also considers a longer 46-year planning period. Since the City's economic development strategy is articulated in the new EDSP, this EOA update supports and references that work, but the scope didn't duplicate the work that was completed in the EDSP.

Demand

McMinnville will need about 741 gross acres (384 industrial and 357 commercial) for employment for the 2021 to 2041 period and 954 gross acres (384 industrial and 570 commercial) for the 2021 to 2067 period (Exhibit 66**).**

Demand was calculated in following components:

- By developing an employment forecast and assigning employment density factors to determine associated land needs, Employment forecasts indicate that McMinnville will add 6,885 jobs between 2021 and 2041 and 16,001 jobs between 2021 and 2067. ***For this component of the demand, McMinnville will need at least 405 gross acres (153 industrial and 252 commercial) for employment for the 2021 to 2041 period and 899 gross acres (329 industrial and 570 commercial) for the 2021 to 2067 period (Exhibit 54).***
- By removing the following employment from the employment forecast, and instead estimating land needs for these employers based on interviews with the respective entities: local government, K-12, and higher education. ***These are discussed in the public and institutional land needs section of the Urbanization Summary report, and are not discussed in the land sufficiency analysis for commercial and industrial employment.***
- The City assumed 5% of new employment would be accommodated on sites that don't require new vacant land, through infill, redevelopment, and locations that don't require new employment land.
- By identifying the existing retail leakage identified in a market analysis, which identifies existing deficits in the base year which are not otherwise accounted for in the forecast of future employment from 2021-2041. ***McMinnville will need about 12.2 acres to address existing retail leakage.***
- By estimating other needed sites which are not accounted for in the average density assumptions. The sites for these uses are unique and not accounted for in the standard employment density factors. These are target industries and uses in the MAC-Town 2032 Economic Development Strategic Plan. ***McMinnville will need 104 acres for other***

needed sites on commercial (e.g., land needs not accounted for in the employment projections) in the 2021 to 2041 period. A net increase of 93 acres when adjusting the employment forecast to reflect these unique site needs and adjustments to average density assumptions for these sites and uses.

- Calculation of additional needed sites on industrial land, based on target industries identified in the EDSP, resulted in ***overall demand for 384 acres of industrial land***.

Supply

In 2019, within the UGB, McMinnville has 421 buildable acres of employment land, with 370 buildable acres in vacant lots and 50 buildable acres in partially-vacant lots. This includes 97 buildable acres of commercial land and 324 buildable acres of industrial land. By 2021, the forecast assumes there will have been demand for 31 gross acres of employment land: 11 gross acres of industrial land and 20 gross acres of commercial land. That leaves a 2021 supply of 390 buildable acres of employment land: 313 buildable acres of industrial land and 77 buildable acres of commercial land

- **Commercial.** Of the 97 buildable acres of commercial land, about 63 acres are in vacant lots, and 33 acres are in partially-vacant lots. About 27 acres (approximately 30% of the buildable commercial land) is on the Evergreen property, which is subject to a Planned Development that limits uses to tourism-related uses consistent with the master plan. There are only about two dozen tax lots with buildable commercial acreage, and only some of these contiguous. There are about a half dozen sites or contiguous properties that have buildable acreage over five acres, accounting for about 72% of the buildable acres.
- **Industrial.** Of the 324 buildable acres of industrial land, about 307 acres are in vacant lots, and 17 acres are in partially-vacant lots. About 55% of the supply (177 acres) is in two tax lots over 50 acres, about 88 and 90 acres. One site is just under 50 buildable acres (15% of the supply), and the remaining sites are below 15 buildable acres.

Sufficiency

Exhibit 66 shows the capacity of unconstrained vacant land and the demand for employment land over the 5-, 10-, 20-, and 46-year planning periods, as well as the pre-2021 period.

Exhibit 66. Comparison of the capacity of unconstrained vacant land with employment land demand by land use type, McMinnville UGB, 2019–2021, 2021–2026, 2021–2031, 2021–2041, and 2021–2067

Source: ECONorthwest.

The next chapter provides a discussion of McMinville's existing Comprhensive Plan goals and policies related to economic development. It suggests updates to policies that may not align with the findings of this EOA or recent updates to supporting planning work including the MAC-Town 2032 Economic Development Strategic Plan.

6. Comprehensive Plan Policies

OAR 660-009-0020 outlines requirements for industrial and other economic development policies.

Local comprehensive plans are to provide a commitment to provide a competitive short-term supply together with a commitment to provide adequate sites and facilities. With this EOA, also identified are fulfillment of community economic development objectives.

Economic Development Goals and Policies

As noted at the outset of this EOA update report, the 2019 MAC-Town Economic Development Strategic Plan states the City of McMinnville's mission related to economic development:

> "McMinnville provides economic opportunity for all residents through sustainable growth across a balanced array of traditional and innovative industry sectors, from steel manufacturing to technology. Economic growth is collaborative, and inclusive of individuals from diverse backgrounds. Businesses leverage local and regional talent pipelines while attracting new employees and residents who value McMinnville's high quality of life. Our strong downtown serves residents and visitors alike, featuring unique shops and world-class restaurants that offer locally-produced food products and globally-renowned wine. As we evolve, we prize our small-town roots and we maintain McMinnville's character."

The currently adopted Comprehensive Plan also includes more detailed goal statements, and some goals include specific policies. This EOA update provides suggested changes to goals and policies that may not align with the city's current vision for economic development. The suggested changes are indicated with items to ~~remove~~ or items to consider adding.

Goal IV 1: To encourage the continued growth and diversification of McMinnville's economy in order to enhance the general well-being of the community and provide employment opportunities for its citizens.

Goal IV 2: To encourage the continued growth of McMinnville as the commercial center of Yamhill County in order to provide employment opportunities, goods, and services for the city and county residents.

Policy:

- 21.00 Commercial uses and services which are not presently available to McMinnville residents will be encouraged to locate in the City. Such uses shall locate according to the goals and policies in the comprehensive plan.
- 21.01 The City shall periodically update its economic opportunities analysis to ensure that it has within its urban growth boundary (UGB) a 20-year supply of lands designated for commercial and industrial uses. The City shall provide an adequate

number of suitable, serviceable sites in appropriate locations within its UGB. If it should find that it does not have an adequate supply of lands designated for commercial or industrial use it shall take corrective actions which may include, but are not limited to, redesignation of lands for such purposes, or amending the UGB to include lands appropriate for industrial or commercial use. (Ord.4796, October 14, 2003)

- 21.02 The City shall encourage and support the start up, expansion or relocation of high-wage businesses to McMinnville.
  - 1. The City shall coordinate economic efforts with the Greater McMinnville Area Chamber of Commerce, McMinnville Industrial Promotions, McMinnville Downtown Association, Yamhill County, Oregon Economic and Community Development Department, and other appropriate groups.
  - 2. Economic development efforts shall identify specific high-wage target industries and ensure that adequately sized, serviced, and located sites exist within the McMinnville urban area for such industries. (Ord.4796, October 14, 2003)
- 21.03 The City shall support existing businesses and industries and the establishment of locally owned, managed, or controlled small businesses. (Ord.4796, October 14, 2003)
- 21.04 The City shall make infrastructure investments that support the economic development strategy a high priority, in order to attract high-wage employment. (Ord.4796, October 14, 2003)
- 21.05 Commercial uses and services which are not presently available to McMinnville residents will be encouraged to locate in the city. Such uses shall locate according to the goals and policies in the comprehensive plan. (Ord.4796, October 14, 2003)

Goal IV 3: To ensure commercial development that maximizes efficiency of land use through utilization of existing commercially designated lands, through appropriately locating future neighborhood and community serving commercial lands and discouraging strip development.

General Policies:

- 22.00 The maximum and most efficient use of existing commercially designated lands will be encouraged as will the revitalization and reuse of existing commercial properties.
- 23.00 Areas which could in the future serve as commercial sites shall be protected from encroachment by incompatible uses.
- 24.00 The cluster development of commercial uses shall be encouraged rather than auto-oriented strip development. (Ord.4796, October 14, 2003)

Locational Policies:

- 24.50 The location, type, and amount of commercial activity within the urban growth boundary shall be based on community needs as identified in the Economic Opportunities Analysis. (Ord.4796, October 14, 2003)

- 25.00 Commercial uses will be located in areas where conflicts with adjacent land uses can be minimized and where city services commensurate with the scale of development are or can be made available prior to development.
- 26.00 The size of, scale of, and market for commercial uses shall guide their locations. Large-scale, regional shopping facilities, and heavy traffic-generating uses shall be located on arterials or in the central business district, and shall be located where sufficient land for internal traffic circulation systems is available (if warranted) and where adequate parking and service areas can be constructed.
- 27.00 Neighborhood commercial uses will be allowed in residential areas. These commercial uses will consist only of neighborhood oriented businesses and will be located on collector or arterial streets. More intensive, large commercial uses will not be considered compatible with or be allowed in neighborhood commercial centers.
- 28.00 A commercial planned development should be encouraged in the proximity of the intersection of Hill Road and West Second Street. Such a development should service the needs of people in western McMinnville. The development should be anchored by a grocery store.

Design Policies:

- 29.00 New direct access to arterials by large-scale commercial developments shall be granted only after consideration is given to the land uses and traffic patterns in the area of development as well as at the specific site. Internal circulation roads, acceleration/deceleration lanes, common access collection points, signalization, and other traffic improvements shall be required wherever necessary, through the use of planned development overlays.
- 30.00 Access locations for commercial developments shall be placed so that excessive traffic will not be routed through residential neighborhoods and the traffic-carrying capacity of all adjacent streets will not be exceeded.
- 31.00 Commercial developments shall be designed in a manner which minimizes bicycle/pedestrian conflicts and provides pedestrian connections to adjacent residential development through pathways, grid street systems, or other appropriate mechanisms. (Ord.4796, October 14, 2003)
- 32.00 Where necessary, landscaping and/or other visual and sound barriers shall be required to screen commercial activities from residential areas.
- 33.00 Encourage efficient use of land for parking; small parking lots and/or parking lots that are broken up with landscaping and pervious surfaces for water quality filtration areas. Large parking lots shall be minimized where possible. All parking lots shall be interspersed with landscaping islands to provide a visual break and to provide energy savings by lowering the air temperature outside commercial structures on hot days, thereby lessening the need for inside cooling. (Ord.4796, October 14, 2003)
- 34.00 The City of McMinnville shall develop and maintain guidelines concerning the size, placement, and type of signs in commercial areas.

- 35.00 The City of McMinnville shall encourage the development of a sign system that directs motorists to parking areas.

Goal IV 4: To promote the downtown as a cultural, administrative service, and retail center of McMinnville.

Downtown Development Policies:

- 36.00 The City of McMinnville shall encourage a land use pattern that:
  - 1. Integrates residential, commercial, and governmental activities in and around the core of the city;
  - 2. Provides expansion room for commercial establishments and allows dense residential development;
  - 3. Provides efficient use of land for adequate parking areas;
  - 4. Encourages vertical mixed commercial and residential uses; and,
  - 5. Provides for a safe and convenient auto-pedestrian traffic circulation pattern. (Ord.4796, October 14, 2003)
- 37.00 The City of McMinnville shall strongly support, through technical and financial assistance, the efforts of the McMinnville Downtown Steering Committee to implement those elements of Phase II of the "Downtown Improvement Plan" that are found proper, necessary, and feasible by the City. (Ord.4796, October 14, 2003)
- 38.00 The City of McMinnville shall encourage the renovation and rehabilitation of buildings in the downtown area, especially those of historical significance or unique design.
- 39.00 The City of McMinnville shall encourage and allow the development of pocket parks, landscaping, and other natural amenities to provide a visual contrast between streets and parking lots and buildings to enhance the general appearance of the downtown.
- 40.00 The City of McMinnville shall encourage and develop a policy of cooperation with federal, state, and local governments and agencies regarding the location of public administrative and service facilities in the downtown area and further encourage these same agencies to develop off-street parking opportunities and transportation alternatives for their employees.
- 41.00 The City of McMinnville shall encourage the expansion of retail and other commercial enterprises east of the railroad tracks and north and south of Third Street consistent with the adopted "Downtown Improvement Plan." (Ord.4796, October 14, 2003)
- 42.00 The City of McMinnville shall continue to redesignate streets and traffic patterns in and around the downtown area to facilitate the movement of automobile traffic and provide for the safety and convenience of pedestrians.

- 43.00 The City of McMinnville shall allow the closing and/or vacating of streets to provide additional areas for off-street parking where such closure will not affect the ability of the police and fire departments, and public utilities to provide their designated service functions or where such closures will not negatively affect the overall traffic circulation in the downtown area.
- 44.00 The City of McMinnville shall encourage, but not require, private businesses downtown to provide off-street parking and on-site traffic circulation for their employees and customers.
- 45.00 The City of McMinnville shall study the feasibility of developing bicycle and pedestrian paths and/or lanes between residential areas and the activity centers in the downtown. (Ord.4961, January 8, 2013)
- 46.00 The City shall work to implement the recommendations of the adopted "McMinnville Downtown Improvement Plan."
- 46.01 The City shall, through its Landscape Review Committee, develop a list of street trees acceptable for planting within the public rights-of-way, parks and open spaces, and downtown. In addition, the committee shall develop standards for the planting of these trees, particularly within the downtown area, such that sidewalk and tree root conflicts are minimized. This effort should be coordinated with McMinnville Water and Light in an effort to minimize conflicts with utility lines.
- 46.02 The City shall, as funding permits and generally in the following order, periodically inventory trees within its public rights-of-way, parks and open spaces, and downtown area in order to assess the overall health of the city's urban forest and to determine those specific trees that may require maintenance, or removal and replacement. As a goal, the City seeks to maintain a diverse urban forest in terms of age and species.
- 46.03 The City shall take steps to minimize hardships to property owners situated adjacent to street trees that may have been found to be the cause of, but not limited to, the cracking or raising of a public sidewalk, or interfering with sewer lines that serve his/her property. In such cases, the City shall install root barriers, if practicable, or remove the offending tree(s). (Ord. 4816, December 14, 2004; Ord.4796, October 14, 2003)

Proposals:

- 6.00 A planned development overlay should be placed on the large cluster commercial development areas and the entrances to the City to allow for review of site design, on-site and off-site circulation, parking, and landscaping. The areas to be overlaid by this designation shall be noted on the zoning map and/or comprehensive plan map.
- 7.00 The City of McMinnville should study the feasibility of designating areas fronting Third Street east of the railroad tracks for retail commercial only, and designated areas on the fringes of the downtown as office residential.

- 8.00 The City of McMinnville should encourage the development of a commercial planned development center in the southwestern portion of the city large enough in scale to serve the needs of the area's population. The center should be in proximity of the intersection of Old Sheridan Road, U.S. Highway 99W, and Oregon Highway 18.

Goal IV 5: To continue the growth and diversification of McMinnville's industrial base through the provision of an adequate amount of properly designated lands.

Goal IV 6: To insure industrial development that maximizes efficiency of land uses, that is appropriately located in relation to surrounding land uses, and that meets necessary environmental standards.

General Policies:

- 47.00 Industries that locate in the community shall meet federal, state, and local environmental standards. These standards shall be given full weight in evaluating the desirability of the industry. Criteria for evaluation shall include, but not be limited by the effect the industry would have on:
  - 1. The natural environment, including air and water quality, natural drainage ways, and soil properties and other physical characteristics of the land including topography.
  - 2. The human environment, including the amount of noise and traffic generated and the ability of the housing industry to provide sufficient dwelling units with at least an adequate level of required urban services.
  - 3. The physical facilities of the community, including the ability of sanitary and storm sewer systems, water supply and distribution system, energy supply distribution systems, police and fire, and schools to provide designated services.
- 48.00 The City of McMinnville shall encourage the development of new industries and expansion of existing industries that provide jobs for the local (McMinnville and Yamhill County) labor pools.

Locational Policies:

- 49.00 The City of McMinnville shall use its zoning and other regulatory methods to prevent encroachment into industrial areas by incompatible land uses.
- 49.01 The City shall designate an adequate supply of suitable sites to meet identified needs for a variety of different parcel sizes at locations which have direct access to an arterial or collector street without having to pass through residential neighborhoods. (Ord. 4961, January 8, 2013)
- 49.02 The location, type, and amount of industrial activity within the Urban Growth Boundary shall be based on community needs as identified in the Economic Opportunities Analysis. (Ord. 4961, January 8, 2013)

- 49.03 In designating new industrial properties, and in redesignating properties to industrial zoning from other designations, the City shall work to provide employment opportunities in locations that are reasonably accessible to McMinnville residents, while minimizing the need to drive through existing or planned residential neighborhoods. (Ord. 4961, January 8, 2013)
- 50.00 The City of McMinnville shall encourage industrial uses to locate adjacent to the airport and south of Three Mile Lane, adjacent to the existing Riverside Drive industrial area, and in existing industrial areas through the proper designation of lands on the comprehensive plan and zoning maps. Comprehensive plan and/or zoning map changes to industrial designations in other areas may be granted if all the applicable goals and policies of the plan can be met.
  - *The City should consider updating this policy to reflect findings of the Three Mile Lane Area Plan, which discusses potential commercial uses in this area.*
- 51.00 The City of McMinnville shall encourage the location of airport-related industrial uses only on the industrial land which is adjacent to the airport. Those lands so reserved shall be designated in the planned development overlay covering this area.
  - *The City should consider updating this policy to reflect updated goals for the area near the airport.*
- ~~52.00 The City of McMinnville shall create a new "limited light industrial" zone which shall be placed on the industrial areas on the south side of Three Mile Lane in those areas where residential development is expected on the north side of the road. The new zone will allow only those types of industrial uses that will not conflict with the residential uses.~~
- ~~53.00 The City of McMinnville shall encourage the phased development of industrial land so that a moderate rate of growth occurs. A moderate rate of growth will be considered that rate which enables the City to provide urban services in a timely, orderly, and economic fashion, and which allows the private sector to provide for the needs of the new residents.~~
- 54.00 The City of McMinnville shall establish industrial planned development ordinances which shall be placed over the future industrial areas designated on the McMinnville Comprehensive Plan Map, the industrial reserve area, and certain existing industrially designated areas within the city limits. The overlay shall also be applied to any areas which are in the future designated for future industrial use through an amendment to the comprehensive plan map. The overlays shall provide standards to control the nuisance and negative environmental effects of industries. These controls shall cover, but not be limited to, the following areas:
  - 1. Landscaping and screening
  - 2. Noise suppression
  - 3. Light and heat suppression
  - 4. Pollution control for air, water, and land

  - 5. Energy impacts
  - 6. Traffic impacts

- 55.00 Deleted as per Ord. 4796, October 14, 2003.
- 56.00 Deleted as per Ord. 4796, October 14, 2003.
- 57.00 Agricultural activities shall be encouraged on industrially designated lands until such time as the lands are utilized for industrial purposes.

Appendix A. Buildable Lands Inventory

ECONorthwest prepared a Goal 10 compliant Economic Opportunities Analysis (EOA) for the City of McMinnville to assess whether the city has sufficient land within its Urban Growth Boundary (UGB) to accommodate population and employment growth forecast for the 20-year period between 2021 and 2041, as well as 5-, 10-, and 46-year planning periods. A key component of this study is the buildable lands inventory (BLI).

The legal requirements that govern the BLI for the City of McMinnville are defined in Statewide Planning Goal 10, OAR 660-009-0005, and OAR 660-009-0015(3). This Appendix summarizes the methods ECONorthwest used to conduct employment buildable lands inventory.

Study Area

The Commercial and Industrial BLI for McMinnville includes all commercial and industrial land within the McMinnville UGB. From a practical perspective, this means that all lands within tax lots identified by the Yamhill County Assessment and Taxation Office that fall within a commercial or industrial plan designation were inventoried. Note that tax lots do not generally include road or railroad rights-of-way or water. ECONorthwest used a July 2018 tax lot shapefile (the same data used for the residential BLI) from Yamhill County for the analysis, as well as previous information used for the 2013 EOA. The inventory then builds from the tax lot-level database to estimates of buildable land by plan designation.

Methods for Inventory of Commercial and Industrial Lands

For commercial and industrial land, the general structure is similar to the residential lands process with a few differences. The buildable lands inventory uses methods and definitions that are consistent with OAR 660-009 and OAR 660-024. Following are the administrative rules that provide guidance on the commercial and industrial BLI.

OAR 660-009-0005:

> *(1) "Developed Land" means non-vacant land that is likely to be redeveloped during the planning period.*
>
> *(2) "Development Constraints" means factors that temporarily or permanently limit or prevent the use of land for economic development. Development constraints include, but are not limited to, wetlands, environmentally sensitive areas such as habitat, environmental contamination, slope, topography, infrastructure deficiencies, parcel fragmentation, or natural hazard areas.*
>
> *(11) "Site Characteristics" means the attributes of a site necessary for a particular industrial or other employment use to operate. Site characteristics include, but are not limited to, a minimum acreage or site configuration including shape and topography, visibility, specific types or levels of public facilities, services or energy infrastructure, or proximity to a particular transportation or freight*

facility such as rail, marine ports and airports, multimodal freight or transshipment facilities, and major transportation routes.

(12) "Suitable" means serviceable land designated for industrial or other employment use that provides, or can be expected to provide the appropriate site characteristics for the proposed use.

(13) "Total Land Supply" means the supply of land estimated to be adequate to accommodate industrial and other employment uses for a 20-year planning period. Total land supply includes the short-term supply of land as well as the remaining supply of lands considered suitable and serviceable for the industrial or other employment uses identified in a comprehensive plan. Total land supply includes both vacant and developed land.

(14) "Vacant Land" means a lot or parcel:

(a) Equal to or larger than one half-acre not currently containing permanent buildings or improvements; or

(b) Equal to or larger than five acres where less than one half-acre is occupied by permanent buildings or improvements.

Unlike with residential lands, the rules for employment lands include the concept of "suitability" which can be affected by factors other than the physical attributes of land. (See OAR 660-009-0005 (11) and (12) above.) The proposed BLI methods do not fully address the suitability factors, rather, they more narrowly assess whether a parcel is buildable based solely on attributes of the land. ECONorthwest had additional discussions with City staff about the assumptions embedded in the BLI as well as whether to apply additional suitability factors to employment lands, and if so, what factors to use.

Inventory Steps

The steps in the inventory of commercial and industrial buildable lands are:

1. Generate UGB "land base"
2. Classify lands by development status
3. Identify constraints
4. Verify inventory results
5. Tabulate and map results

Step 1: Generate UGB "land base"

The commercial and industrial inventory used all of the tax lots in the McMinnville UGB with the appropriate plan designations. Specific designations that were used include:

- Commercial
- Industrial

Step 2: Classify lands

In this step, ECONorthwest classified each tax lot with a plan designation of Commercial or Industrial (based on the lot's status as of January 2019) into one of five mutually exclusive categories based on development status:

- Developed land
- Vacant land
- Partially vacant land
- Public or exempt land

ECONorthwest initially identified buildable land and classify development status using a rule-based methodology. The rules are described below.

Development Status	Definition	Statutory Authority
Vacant Land	A tax lot: (a) Equal to or larger than one half-acre not currently containing permanent buildings or improvements; or (b) Equal to or larger than five acres where less than one half-acre is occupied by permanent buildings or improvements For the purpose of criteria (a) above, lands with improvement values of $0 were be considered vacant.	OAR 660-009-005(14)
Vacant Small Lot	Tax lot less than one half-acre without buildings or improvements.	No statutory definition. Included based on PAC recommendation at February 27, 2020 meeting.
Partially Vacant Land	Partially vacant tax lots are those between one and five acres occupied by a use that could still be further developed based on the zoning. This determination is based on a visual assessment and City staff verification.	No statutory definition
Public or Exempt Land	Lands in public or semi-public ownership are considered unavailable for commercial or industrial development. This includes lands in Federal, State, County, or City ownership as well as lands owned by churches and other semi-public organizations and properties with conservation easements. Public lands are identified using the Yamhill County Assessment property tax exemption codes.	No statutory definition

Development Status	Definition	Statutory Authority
Developed Land	OAR 660-009-005(1) defines developed land as "Non-vacant land that is likely to be redeveloped during the planning period." Lands not classified as vacant, partially-vacant, undevelopable, or public or exempt are considered developed.	OAR 660-009-005(1)

Step 3: Identify constraints

The commercial and industrial inventory uses development constraints consistent with guidance in OAR 660-009-0005(2). Most of the development constraints are the same as those used for residential lands. (The exception is steep slopes, which are defined as 15% or greater for employment lands and 25% or greater for residential lands.) Note that the previous EOA in 2013 used the 25% threshold for steep slopes. In the 2020 update, the PAC recommended using 15% to better reflect needs for development of employment land.

Constraint	Statutory Authority	Threshold	File name
Goal 5 Natural Resource Constraints			
Regulated Wetlands	OAR 660-009-0005(2)	Within National Wetlands Inventory	NWI
Natural Hazard Constraints			
Floodways	OAR 660-009-0005(2)	Lands within FEMA FIRM identified floodway	Floodplains_and_Floodways
100 Year Floodplain	OAR 660-009-0005(2)	Lands within FEMA FIRM 100-year floodplain	Floodplains_and_Floodways
Steep Slopes	OAR 660-009-0005(2)	Slopes greater than 15%	TBD

These areas were treated as prohibitive constraints (unbuildable). All constraints were merged into a single constraint file, which was then used to identify the area of each tax lot that is constrained. These areas were deducted from lands that were identified as vacant or partially vacant.

Step 4: Verify inventory results

As with the residential BLI, ECONorthwest used a multi-step verification process. This included review of aerial imagery, discussion and verification with City staff, and review of 2013 EOA results.

Step 5: Tabulate and map results

The results of the commercial BLI are presented in tabular and map format in Chapter 5.

Appendix B. Employment on Other Land and Employment Density

This appendix presents research and findings that ECONorthwest completed to provide rationale for employment density and "refill" and redevelopment assumptions for the 2020 update of the City of McMinnville's EOA. It presents empirical analysis of existing employment densities in McMinnville and information on assumptions used for EOAs in comparison cities noted in ***Exhibit 1.***

Exhibit 1. Cities used for comparison to the City of McMinnville by population and county

City	Population (2018 PSU Estimate)	County
Ashland	20,815	Jackson
Newberg	23,795	Yamhill
Redmond	29,190	Deschutes
Grants Pass	37,285	Josephine
Albany	53,145	Linn & Benton
Corvallis	59,280	Benton
Bend	89,505	Deschutes

In addition, with the 2013 EOA, the City also previously collected comparative data from other cities and the 2001/03 EOA for employment density and "refill" and redevelopment factors. That is summarized in Figure 40 of the 2013 EOA, which is also attached at the end of this document. It also includes guidelines from DLCD's Goal 9 Guidebook. The City elected to add additional comparable cities to the analysis as three of the five cities in Figure 40 are metro cities with considerably different economic development opportunities and strategies.

Employment on Other (Non-Vacant) Land

ECONorthwest compiled information from the comparison cities on assumptions used in each city's EOA for employment that doesn't require vacant commercial or industrial land. (This corresponds to step 6 in the EOA summary matrix.) The 2013 McMinnville EOA used an overall assumption for employment on non-vacant land of 17%. Exhibit 2 summarizes assumptions used in other Oregon comparison cities.

Exhibit 2. Employment on other land assumptions for comparison cities

City	Emp. on Other Land	Rationale/Approach	Date
Ashland	20%	Empirical analysis of capacity on redevelopable lands.	2007
Newberg	5% (retail only)	Empirical analysis. (See Figure 40 on pg. 85 of 2013 McMinnville EOA)	2006
Redmond	10%	Reasonable judgement. (pg. 5-29).	2005
Grants Pass	10%	Reasonable judgement based on comparison areas. (pg. 8-46)	2007
Albany	0%	Redevelopment was accounted for in the BLI, so they did not account for it again in the forecast. (pg. 11)	2005
Corvallis	Industrial: 11% Retail: 12% Office: 29%	Reasonable judgement based on available buildable land. (pg. 4-56)	2016
Bend		Note: Bend used a site-based approach for estimating land need. We do not recommend this approach.	2016

DLCD's Goal 9 workbook presented guidelines of 85-90% growth on vacant land, based on 10-15% refill and redevelopment cited as a rule of thumb.

The effect of applying refill and redevelopment rates to existing developed land is to implicitly increase the employment density on those lands. Employment density is discussed further in the next section, but must be evaluated together with assumptions about refill and redevelopment. As discussed in the next section, the observed density of employment in commercial and industrial plan designations is currently about 10 employees/net acre in industrial plan designations (down slightly from the 2013 EOA) and 23 employees/net acre in commercial plan designations (up slightly from the 2013 EOA). Exhibits 3A-3C show the effective densities resulting from applying 17%, 10%, and 5% of new employment to developed commercial and industrial sites.

For industrial employment, this ranges from absorbing between 96 to 325 additional employees from present through 2041, and increasing to absorb between 191 to 650 additional employees from present through 2067 on *currently* developed properties. This would increase the employment density for these sites from 10 employees/acre to between 11 to 12 employees/acre.

For commercial development, this ranges from absorbing between 295 to 1,003 additional employees from present through 2041, and increasing to absorb between 619 to 2,103 additional employees from present through 2067 on *currently* developed properties. This would increase the employment density for these sites from 23 employees/acre to between 25 to 29 employees per acre.

Exhibit 3A. Effective Employment Densities with 17% Refill/Redevelopment Assumption on Current Developed Commercial and Industrial Sites

Plan Designation	Covered Employment by Plan Des.	Total Emp. Calc. by Plan Des.	Net Unconstrained Developed Acres in Plan Designation	Effective Employment per Net Acre on Current Developed, Non-Vacant Sites						
				Current Calc Emp Density	17% of Add'l Emp to 2041	Tot Emp Exist Sites by Plan Des. In 2041	Emp. Density Exist Sites with 17% of emp to 2041	17% of Add'l Emp to 2067	Tot Emp Exist Sites by Plan Des. In 2067	Emp. Density Exist Sites with 17% of emp to 2067
Industrial	3,422	4,485	428	10	325	4,810	11	650	5,135	12
Commercial	6,245	8,184	357	23	1,003	9,187	26	2,103	10,287	29

Exhibit 3B. Effective Employment Densities with 10% Refill/Redevelopment Assumption on Current Developed Commercial and Industrial Sites

Plan Designation	Covered Employment by Plan Des.	Total Emp. Calc. by Plan Des.	Net Unconstrained Developed Acres in Plan Designation	Effective Employment per Net Acre on Current Developed, Non-Vacant Sites						
				Current Calc Emp Density	10% of Add'l Emp to 2041	Tot Emp Exist Sites by Plan Des. In 2041	Emp. Density Exist Sites with 10% of emp to 2041	10% of Add'l Emp to 2067	Tot Emp Exist Sites by Plan Des. In 2067	Emp. Density Exist Sites with 10% of emp to 2067
Industrial	3,422	4,485	428	10	191	4,676	11	383	4,868	11
Commercial	6,245	8,184	357	23	590	8,774	25	1,237	9,421	26

Exhibit 3C. Effective Employment Densities with 5% Refill/Redevelopment Assumption on Current Developed Commercial and Industrial Sites

Plan Designation	Covered Employment by Plan Des.	Total Emp. Calc. by Plan Des.	Net Unconstrained Developed Acres in Plan Designation	Effective Employment per Net Acre on Current Developed, Non-Vacant Sites						
				Current Calc Emp Density	5% of Add'l Emp to 2041	Tot Emp Exist Sites by Plan Des. In 2041	Emp. Density Exist Sites with 5% of emp to 2041	5% of Add'l Emp to 2067	Tot Emp Exist Sites by Plan Des. In 2067	Emp. Density Exist Sites with 5% of emp to 2067
Industrial	3,422	4,485	428	10	96	4,581	11	191	4,676	11
Commercial	6,245	8,184	357	23	295	8,479	24	619	8,803	25

Both the industrial and commercial employment densities have remained nearly the same over time: from the 2001/03 EOA, the empirical calculations in the 2013 EOA, and the empirical calculations in the current analysis. Industrial densities have decreased slightly from about 11 employees/acre to about 10 employees/acre. Commercial densities have increased slightly from about 22 employees/acre to about 23 employees/acre.

The 2001/03 EOA used variable assumptions for refill/redevelopment, with 17% for industrial, 15% for commercial, and 13% for institutional, while the 2013 EOA increased these all to 17%.

Average employment densities don't appear to have increased consistent with those rates. Actual changes compared to assumptions about refill/redevelopment of the existing developed sites may be the result of:

- Refill/redevelopment has not occurred, or has occurred at lower rates than assumed in McMinnville's prior EOAs
- Employment densities of existing businesses may have declined, through reduction of employees or through expansion of facilities without commensurate increases in employment densities
- Increases in employment density in some cases may have been offset by reductions in employment density in other cases

Potential reasons may include:

- Increases in automation, where operations occupy the same space, but with fewer employees
- More new businesses/new land use of types with the same or lower employment densities than previous business' employment densities
    - Potential increases in area devoted to storage, cold storage, warehousing, and distribution, some of which may increase together with surrounding agricultural uses.
    - Potential increases in area devoted to indoor grow operations, potentially further increasing from the growth of industrial hemp production.[116]

The dynamics of new job creation should also be considered in evaluating refill and redevelopment.

- How strongly is job growth correlated with the size or age of a business? How much job growth is created through newer start-ups vs. long-term growth of more established businesses? How many smaller entrepreneurial businesses intend to grow to be larger businesses vs. remain smaller?
- While there may be capacity to add employees within established space for existing businesses, new businesses may need their own facilities that can't be located within the facilities of other businesses. Some existing businesses may retain partially vacant sites in the event they need to expand. Some businesses will require ownership of their land and facilities rather than leasing space on existing developed sites.

An assumption of 5% industrial refill/redevelopment would result in an increase in employment density from about 10 emp/ac to about 11 emp/ac on existing developed sites. This is generally consistent with McMinnville's historic trends.

[116] https://www.forbes.com/sites/andrebourque/2019/01/31/how-hemp-is-moving-oregon-marijuana-to-an-indoor-grow-crop/#10ff80b960ed

The empirical calculated density for commercial sites in the 2013 EOA was 22 emp/acre, but an aspirational policy of 26 emp/acre was adopted. Any of the three scenarios calculated above (5%, 10%, or 17%) for refill/redevelopment on *currently* developed sites would result in an increase in density on these sites that would exceed currently observed densities, ranging from 24 to 26 emp/acre by 2041. Carrying over the 17% assumption from the 2013 EOA would mean an assumed employment density of 29 emp/acre on these sites by 2067, compared to the current 23 emp/acre, and exceeding even the aspirational overall assumption of 26 emp/acre used in the 2013 EOA. An assumption of 5% commercial refill/redevelopment would result in an increase in employment density from 23 emp/ac to 25 emp/ac on these sites in 2067.

Recommended approach and assumptions

This update could simply carry forward the 17% refill/redevelopment assumption from the 2013 EOA for all categories, but the analysis of empirical data, calculations of effective density, and comparisons with other cities and the DLCD Goal 9 Guidebook suggest that assumption is high, and that McMinnville hasn't achieved this historically. Further, even if that level of refill/redevelopment had been achieved historically, carrying over an assumption for each planning period would have a compounding effect of assuming unlimited, successively higher capacity of the same existing developed sites to absorb more employment each time. This would push the employment density for those developed lands up each planning cycle, where infill and redevelopment would have already theoretically occurred and increased in each previous planning cycle.

A reasonable assumption would be 5% refill/redevelopment for both commercial and industrial employment, which is what we would recommend. This would result in an increase in employment density on currently developed sites, still exceeding the empirical employment densities from the 2013 EOA.

The assumed 17% refill/redevelopment rate from the 2013 EOA would be an aspirational assumption that exceeds the empirical densities and exceeds the aspirational density from the 2013 EOA. It is an estimate that we don't anticipate will be achieved, and is higher than most comparisons. The 2001/03 EOA refill/redevelopment assumption of 17% for industrial and 15% for commercial is another aspirational assumption that hasn't been observed historically.

The tables below show the result of the 5%, 10%, and 17% refill/redevelopment assumptions for comparison for the 2021-2041 period.

The government land use type is excluded from the remaining employment forecast calculations, as we account for government employment in calculations for other land needs.

Exhibit 4a. Estimate of new employment that will require vacant land, McMinnville UGB, 2021 to 2041 (17% Assumption)

Land Use Type	New Employment Growth	Emp. on Other Land	New Emp. on Vacant Land
Industrial	1,667	283	1,384
Retail Commercial	383	65	318
Office & Commercial Services	3,346	569	2,777
Tourism Services	1,269	216	1,053
Total	**6,665**	**1,133**	**5,532**

Exhibit 4b. Estimate of new employment that will require vacant land, McMinnville UGB, 2021 to 2041 (10% Assumption)

Land Use Type	New Employment Growth	Emp. on Other Land	New Emp. on Vacant Land
Industrial	1,667	167	1,500
Retail Commercial	383	38	345
Office & Commercial Services	3,346	335	3,011
Tourism Services	1,269	127	1,142
Total	**6,665**	**667**	**5,998**

Exhibit 4c. Estimate of new employment that will require vacant land, McMinnville UGB, 2021 to 2041 (5% Assumption)

Land Use Type	New Employment Growth	Emp. on Other Land	New Emp. on Vacant Land
Industrial	1,667	83	1,584
Retail Commercial	383	19	364
Office & Commercial Services	3,346	167	3,179
Tourism Services	1,269	63	1,206
Total	**6,665**	**332**	**6,333**

Employment Density

ECONorthwest completed an empirical analysis of the overall employment density in commercial and industrial areas, as well as in sample areas for the following land use types included in the employment forecast—industrial, office commercial, and retail commercial.[117] The 2013 McMinnville EOA used the following assumptions for employment density:

- **Industrial**: 11 employees per acre
- **Commercial**: 26 employees per acre

The 2013 EOA included an empirical analysis of employment density. The 11 employee/acre industrial density was the empirical calculated density. The empirical commercial employment density was 22 employees per acre. The 26 employee/acre density was an aspirational, policy-based assumption.

In the PAC materials provided for the meeting on September 5, 2019, we completed a sensitivity analysis for employment density based on the 2013 EOA assumptions. The analysis shows the effect of a 10% increase and 10% decrease of the 2013 employment density assumptions and the range of resulting needed acreage. The PAC requested further research based on existing employment density in McMinnville. The results of that analysis are provided in this section.

Overall employment density for existing employment in McMinnville

The analysis of overall employment density for commercial and industrial areas included lots identified as "developed" in the buildable lands inventory (BLI) and summarized the employment per acre on these sites by plan designation (commercial or industrial land only). Land in wetlands was removed from the acreage calculation to better account for land used for employment. We calculated employment density, expressed here as total employees per acre, by dividing the number of employees on developed sites in commercial and industrial plan designations by the acreage (less wetlands) of those developed sites. The results of this calculation were:

- **Industrial:** 10 employees per acre
- **Commercial:** 23 employees per acre

Exhibit 5 shows the results of applying these employment density assumptions for the remaining land use types.

[117] The other land use types—tourism services and government—were excluded from the sample area analysis. The PAC will be discussing site characteristics. The sites needed for tourism services are typically similar to the needs for retail commercial. Thus, it is reasonable to assume the same employment density for both tourism services and retail commercial. Government employment will not require vacant commercial and industrial land, so we did not analyze employment density for this land use type.

Exhibit 5a. Estimate of future land demand for new employment (plan designation approach), McMinnville UGB, 2021 to 2041, after 17% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,467	10	147	156
Retail Commercial	337	23	15	18
Office & Commercial Services	2,945	23	128	156
Tourism Services	1,117	23	49	59
Total	**5,866**		**338**	**389**

Exhibit 5b. Estimate of future land demand for new employment (plan designation approach), McMinnville UGB, 2021 to 2041, after 10% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,500	10	150	160
Retail Commercial	345	23	15	18
Office & Commercial Services	3,011	23	131	160
Tourism Services	1,142	23	50	61
Total	**5,998**		**346**	**398**

Exhibit 5c. Estimate of future land demand for new employment (plan designation approach), McMinnville UGB, 2021 to 2041, after 5% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,584	10	158	169
Retail Commercial	364	23	16	19
Office & Commercial Services	3,179	23	138	169
Tourism Services	1,206	23	52	64
Total	**6,333**		**365**	**420**

While this approach provides a reasonable indication of employment densities in McMinnville, the mix of types of employment on sites may affect the overall result (i.e., not all employment in industrial areas is classified as industrial employment). However, these results align with comparable areas and previous guidelines for calculating employment density, and are therefore reasonable assumptions for the purposes of the EOA.

Sample area employment density for existing employment in McMinnville

ECONorthwest also analyzed sample areas representative of employment in McMinnville by land use type. City staff assisted in choosing these areas for further analysis based on local knowledge as well as requirements for data confidentiality. Again, we calculated the employment density by dividing the number of total employees in each sample area by the total acreage of the sample area site. The results by land use type were:

- **Industrial**: 11 employees per acre
- **Office commercial**: 29 employees per acre
- **Retail commercial**: 19 employees per acre

Similar to the first approach to calculate overall employment density, a sample area approach also has limitations. Sample areas, by definition, do not provide information on employment density across McMinnville. However, these areas were chosen based on a representation of typical employment areas in McMinnville. Limitations in data availability, reporting, and confidentiality also present limitations in results.

The results of both approaches align with results from other studies in comparable cities, as well as the guidelines in DLCD's *Industrial and Other Employment Lands Analysis—Basic Guidebook,* which states:

> "Typical employment densities per net acre range from 8 - 12 jobs for industrial; 14 - 20 jobs for commercial; and 6 - 10 jobs for institutional/other jobs."

The next section provides background information on employment density assumptions used in cities that are comparable to McMinnville.

Exhibit 6 shows the results of applying these employment density assumptions for the remaining land use types.

Exhibit 6a. Estimate of future land demand for new employment (sample area approach), McMinnville UGB, 2021 to 2041, after 17% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,384	11	126	134
Retail Commercial	318	19	17	20
Office & Commercial Services	2,777	29	96	117
Tourism Services	1,053	19	55	68
Total	**5,532**		**294**	**339**

Exhibit 6b. Estimate of future land demand for new employment (sample area approach), McMinnville UGB, 2021 to 2041, after 10% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,500	11	136	145
Retail Commercial	345	19	18	22
Office & Commercial Services	3,011	29	104	127
Tourism Services	1,142	19	60	73
Total	**5,998**		**319**	**367**

Exhibit 6c. Estimate of future land demand for new employment (sample area approach), McMinnville UGB, 2021 to 2041, after 5% deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,584	11	144	153
Retail Commercial	364	19	19	23
Office & Commercial Services	3,179	29	110	134
Tourism Services	1,206	19	63	77
Total	**6,333**		**336**	**388**

Employment density comparison

City of McMinnville staff provided ECONorthwest with a list of cities typically used for comparison purposes. The cities and their population are listed in Exhibit 7.

Exhibit 7. Cities used for comparison to the City of McMinnville by population and county

City	Population (2018 PSU Estimate)	County
Ashland	20,815	Jackson
Newberg	23,795	Yamhill
Redmond	29,190	Deschutes
Grants Pass	37,285	Josephine
Albany	53,145	Linn & Benton
Corvallis	59,280	Benton
Bend	89,505	Deschutes

Each city listed above has completed an EOA between 2005 and 2016. Methodologies for each EOA varied, and information related to employment density assumptions was not consistently reported. The assumptions document in each EOA are listed in Exhibit 8, along with a description of the rationale or approach used for arriving at the employment density numbers, if available. These approaches generally fell into two categories, either (1) a reasonable judgement based on comparable cities or (2) an empirical analysis of existing employment density or other metric.

Exhibit 8. Employment densities for comparison cities

City	Employment Density (employees per acre)			Rationale/Approach	Date
	Industrial	Commercial	Retail		
Ashland	12	17	--	Reasonable judgement/comparison (pg. C-6)	2007
Newberg	11	21	21	Empirical analysis (pg. 84 McMinnville 2013 EOA)	2010
Redmond	5 (low) – 12 (high)	12 (low) – 20 (high)	--	Empirical analysis/comparison (pg. 5-29)	2005
Grants Pass	10	17	17	Reasonable judgement/comparison (pg.8-47)	
Albany	12	--	20	Reasonable judgement/comparison (pg 11)	2007
Corvallis	10	35	25	Empirical analysis (pg 4-60)	2016
Bend	--	--	--	*Note: Bend did not use an EPA approach for the 2016 EOA.*	2016

Recommended assumptions and approach

The results of the empirical analysis are within reasonable ranges for employment densities. Exhibit 9 shows the recommended approach of 11 employees per acre for industrial and 23 employees per acre for all other land use types. It would also be possible to use the commercial density as a total control for the commercial subcategories and allocate a proportion of the total acreage to each subcategory based on the share from the sampled employment densities if preferred, but we believe this method is reasonable.

Exhibit 9. Estimate of future land demand for new employment (recommended approach), McMinnville UGB, 2021 to 2041, after 5% refill/redevelopment deduction

Land Use Type	New Emp. on Vacant Land	Employees per Acre (Net Acres)	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	1,584	11	144	153
Retail Commercial	364	23	16	19
Office & Commercial Services	3,179	23	138	169
Tourism Services	1,206	23	52	64
Total	**6,333**		**351**	**405**

These calculations do not include the government land needs, which are calculated separately.

During discussion of site characteristics, a portion of the commercial uses will be split out and assigned to neighborhood-serving commercial and services to be located in neighborhood areas.

Figure 40. Comparative Employment Density & Redevelopment Factors

Reference	Employment Density (Jobs per Acre)	% of Job Growth on Vacant Employment Land
2001 McMinnville EOA	11 industrial 22 commercial 35 institutional	83% industrial 85% commercial 87% institutional (based on factors including 1-5% requires no non-res built space or land, 5-7% on existing developed land, and 5% vacancy rate)
DLCD Goal 9 Guidebook (2005)	8-12 industrial 14-20 commercial 6-10 institutional & other (demand for net acres; also noted is that each acre can accommodate 10-15 jobs for general commercial and office-park industrial, 20 for offices in non-metro downtowns & suburban settings)	85-90% job growth on vacant land (based on 10-15% use of vacant or redeveloped buildings cited as general rule of thumb)
Salem-Keizer Metro Area Regional EOA 2012-2032 (May 2011)	Forecast densities @: 20 light industrial (above 12-15 current) 36 general office (reflecting current average with range from 27 in retail areas to 73 in Salem central business area) Retail/personal service uses forecast not by jobs per acre (but @ 0.30 FAR)	95% industrial 83% general office (based on assumption that 5% of industrial and 17% of office new employment will locate in existing space or sites not requiring new land; EOA also notes that "there is no study that quantifies how much employment is commonly accommodated in existing built space over a 20-year period in a city.")
Albany EOA Update (2007)	12 industrial 20 commercial retail/services 10 government	100% job growth on vacant land (was at 90% with 2000 EOA @ 10% refill rate but adjusted to 0% rate as the updated 2007 BLI already accounted for infill and redevelopment on supply side of analysis)
Newberg EOA (2010)	11 industrial (including 10% increase in density as efficiency measure) 21 commercial retail & office (overall average with office calculated @ 40% FAR & avg 201 sf/job; retail estimated @ 14.8 net buildable acres per 1,000 new households)	See density for industrial Office appears to assume 100% development on vacant land Retail assumes 95% use of vacant land (with 5% assumed for infill & redevelopment)
City of Beaverton Final Draft EOA (2010)	18 general industrial 10 warehouse 23 flex/business park 58 office 30 retail 38 institutional (@ Metro method of jobs/bldg sf & FAR for densities)	94.2% industrial 92.7% commercial (calculated for excess vacancy above 6% target normalized rate with excess figures at 5.8% industrial, 7.3% commercial)
Metro Urban Growth Report (2009)	6 general industrial & warehouse 23 flex/business park 46 office 27 retail 27 institutional (Calculated using jobs/bldg sf & FAR for densities; @ low end of spectrum for outer ring suburbs)	80-90% general industrial, warehouse & flex/business park (10-20% refill) 70% office (30% refill) 40-70% retail (or 30-60% refill with most (generally @ lower end of refill rates) 60-65% institutional (or 35-40% refill) (Eange for outer ring suburbs, 2015-30 time period)

Sources: From documents prepared by ECONorthwest, Johnson-Gardner and E. D. Hovee & Company, LLC.

Appendix C. Other Site Needs

Use	Description or Example*	Land Need	EDSP Reference or Other Reference	Employment/Acreage Adjustment	Notes
1. Community Center/ Recreation Facility	Update, improve, expand and add recreational facilities that serve the community's needs including a Community Center and Aquatic Center.	10 acres	3.2.2	**22 Employees** net increase for additional programs (In addition to assuming no net change with transfer of existing FTE from old to new location). *Source: Parks Director*	The description in the EDSP wasn't explicit regarding a public or private facility. Therefore, for purposes of the EOA, this wasn't initially assigned to public land. The City's feasibility analysis work is now underway, and this is calculated as a public facility. The Parks LOS of 14 acres/1000 population is for neighborhood parks, community parks, and greenways, and doesn't include this type of special use facility. For City of McMinnville non-park needs, the assumption was 7 additional acres for 2021-2041, including 4.5 acres for fire stations, plus 0.26 acres per 1,000 population. There is a need for 10 acres for a community center and aquatic center, which alone would exceed the total additional need already identified for the 20-year period, unless it could be sited on land already owned by the City. The feasibility analysis has not yet progressed to the siting criteria / site selection phase, so there hasn't been a determination about location. Therefore, at this time, the proposal retains an assumption of an additional 10 acre land need. If it is later determined the facility can be sited on property already owned by the city, then the additional 10 acres could be removed from this category, and accordingly, no further deduction of employment would be made for calculating the land need associated with the use, as it wouldn't be separately classified as an 'other needed site.'

2. Outdoor Stage/ Amphitheater	**Examples:** Britt, Jacksonville Cuthbert, Eugene Bi-Mart, Central Point Les Schwab, Bend	5 acres plus parking (Assume parking is co-located and shared with other use)	3.2.1	15 Full Time, 45 Seasonal, (60 total payroll June-September). **30 Employees.** Tot Adj for Annual Average. *Source: Britt Festival (2,200 seating capacity)*	If an amphitheater is to serve a tourism-driving economic development function that would attract artists on a tour circuit, it would need to be sized to meet the minimum criteria for seating capacity necessary to reflect the realities of ticket sales. Of the four such examples evaluated for facility size, Britt was at the low end of seating capacity, at 2,200. Several of these are located in public parks and operated by separate operators. The location within a park helps allow for shared parking facilities. Therefore, the size estimate is just for the amphitheater, and not for the additional land needed for venue parking.
3. See Ya Later Foundation – Champions Center (or equivalent facility)	The Champions Center is planned as a youth and family recreational and educational complex.	28 acres (4 acres for buildings, 6 acres for parking, 12 acres for 6 athletic fields, 6 acres for associated facilities)	See Ya Later Foundation Proposal, (6.3)	14 Full Time, 12 Seasonal Part Time (6 Total After Adjusting for Annual Average), **20 Employees** plus Volunteer Base *Source: See Ya Later Foundation Proposal*	The See Ya Later Foundation estimates a need for 28 acres for recreational facilities. Co-locating facilities as part of a complex would provide opportunities for shared parking. (The specific organization is referenced here, since this is not hypothetical).
4. Arts and culture focused event center	**Example:** Chehalem Cultural Center, Newberg	3.5 acres	3.3	7 Full Time + 2 FTE estimated as 8 Part-Time = **15 Employees** *Source: Chehalem Cultural Center*	This item combines items which are separately identified in the EDSP (community art space, collaborative studio, cooperative gallery, arts and culture-focused event center).
5. Evergreen Aviation and Space Museum	Support existing facilities Based on facilities in master plan for site	27 acres	(3.3)	**Master Plan Facilities:** Adventure Park (50 person capacity): 6 Lodge (96 rooms) 45 Other: Admin Building, Restoration Building, Support Building, Student Housing): 6 **Sum: 57 Employees**	In the EDSP, a single strategy discusses assisting efforts of uses including Evergreen and the Yamhill County Heritage Museum. However, since the EOA effort is focused on the UGB, the language used in the EOA related to this item has been revised to discuss only the Evergreen property which is in the UGB, to clarify the land-use aspects of this item pertaining to the UGB focus on Evergreen and not the Heritage Museum, which is not in the UGB. The employment estimate relates to the master plan for the property.

6. Wings and Waves	Opportunities for growth and expansion	Location-specific land need at existing partially vacant site. *See above.*	6.3	*See above.*	For purposes land needs discussion, this is discussed in the context of the overall larger Evergreen properties, without separately discussing site needs separately for Evergreen and Wings & Waves. Therefore, the needs discussed for "Evergreen" above are inclusive of the property for Wings & Waves.
7. Conference Center	40,000 sf conference space, accommodation, and parking:	5 acres	6.4	**13 Employees** *Source: Feasibility Analysis*	
8. Equestrian center with supporting commercial activity inside UGB	Would include rural/urban interface facilities, with those uses inside the UGB that cannot be developed on EFU land outside the UGB	20 acres in UGB, larger footprint outside UGB	(6.3)	**Rural/Urban interface portion on 20 ac within UGB:** Resort: 24 RV Park: 4 Distillery: 12 Brewpub: 40 Open Plaza Areas: 0 **Sum: 80 Employees**	Employment from feasibility studies centers range from 32 to 70 employees, average of about 0.1 employees per acre. Sources: "Towards the Creation of a Horse Park in the Commonwealth of Massachusetts: A Feasibility Study" and "Maryland Horse Park and Agricultural Education Center Feasibility Study"
9. Food hub and public market	Focused on local craft foods & beverages	3.5 acres	3.2.2	**13 Employees** *Source: USDA "Regional Food Hub Resource Guide"*	The referenced resource guide indicates that the average number of employees created by a food hub is 13 employees.
10.Makerspace/ innovation hub/ fabrication center	Supports local innovation & entrepreneurial ecosystem	2 acres	6.3	**3 Employees** + Contracted Services *Source: Talent Maker City*	Talent Maker City is a nonprofit organization that operates a makerspace in Talent, Oregon, in the heart of their downtown. They have two full-time employees and one part-time employee. They also contract with independent contractors, including retired teachers and specialists in their fields to conduct classes and workshops.

TOTAL	**104 acres (total)**	**<u>Average Annual Employment:</u>** Community Center: 22 (net) Amphitheater: 30 See Ya Later Foundation or Equivalent: 20 Arts & Culture Center: 15 Evergreen + Wings & Waves: 57 Conference Center: 13 Equestrian Center (portion inside UGB): 80 Food Hub: 13 <u>Makerspace: 3</u> **Sum: 253 Employees** 253 Employees @ 23 emp/acre= 11 acres 104 acres - 11 acres = **<u>net increase of 93 acres</u>** for other needed sites, over acres calculated from average employees/acre

Appendix D. Site Need Letters

McMinnville | ECONOMIC DEVELOPMENT PARTNERSHIP

Please accept these comments regarding the City of McMinnville's Economic Opportunity Analysis and the estimated future industrial land needs. MEDP has had the good fortune to work with many economic development partners over the years as we work to further our mission of advancing strategies that respond to the needs of McMinnville's traded-sector businesses. We do this through four economic development strategies guided by the City's MAC Town 2032 Economic Development Strategic Plan: 1) Business Retention & Expansion, 2) Business Attraction, 3) Workforce Development, and 4) Innovation Development.

Without available, buildable industrial lands the strategic plan cannot be fully realized. The historical job growth and the projected job growth of 27% over the next 20 years will struggle to take place without planning for necessary industrial land.

The current estimates state McMinnville will need 153 acres of buildable industrial lands by 2041 and 329 buildable acres by 2067. Currently, we have 323 acres of identified industrial land. The reality of those numbers is that 177 of those acres are on two sites. The highest and best use and market realities for these sites with Highway 18 frontage may make these sites impractical to retain as large industrial sites that would be available for industrial use. The potential unavailability of these sites for industrial use would place us well behind the projected need.

While acres available and acres needed may be close to matching up, the fact is there are few perfect sites. An available site may meet a company's minimum requirements, but it's location, shape, slope, or infrastructure may not work. So, they will look for another similar sized site in a different location (hopefully) within the community. McMinnville has lost out on potential opportunities due to lack of rail-served sites, proximity to a major metro area, access to a major airport, or location close enough to an Interstate. It is critical we don't lose out on projects due to a lack of available sites for our targeted industries.

In order to address our targeted industry's needs of high-tech/clean-tech manufacturing, value-added manufacturing, UAV manufacturing, business park, innovation campus, and local and regional headquarters, we will need varying sizes of sites with various requirements. The minimum lot size for these sectors should be 5 acres with a span of up to 25 acres.

Rail served sites continue to be a requirement for some companies interested in a McMinnville location. An additional 5 sites of 5-25 acres would be a good use of rail-served industrial property.

Also, with over 80 manufacturers in McMinnville, we will need sites for existing companies that are growing out of 0.5 – 5-acre sites into larger sites of 10 -20 acres. An additional 5 sites would accommodate additional existing business expansions.

Potential developments associated with targeted sectors include the creation of a mixed-used Innovation Center that would require 20-40 acres, depending on density, and an Airpark allowing for local, regional headquarter space. This could require 3-5 sites of 5-25 acres, and an additional 10 sites between 2-25 acres for companies wanting access to the airport, or access to an Innovation Center.

The types of companies in the targeted sectors are meant to continually diversify the local economy and never rely heavily on a single business, or industry. The ability to have various site sizes and locations to choose from can assist with potential job growth. Available sites are like options that attract opportunity. Without multiple options of readily buildable industrial lands, you risk the loss of new business growth.

Sincerely,

Scott G. Cooper, CEcD
Executive Director
McMinnville Economic Development Partnership

DRAFT

McMinnville Industrial Promotions, Inc.

P.O. Box 328
McMinnville, Oregon 97128

To Whom It May Concern:

McMinnville Industrial Promotions, Inc. ("MIP") appreciates the opportunity to present its written comments related to the City of McMinnville's Economic Opportunities Analysis and Urbanization Report (Phase 2) as coordinated with the City's MAC-Town 2032 Economic Development Strategic Plan. MIP specifically addresses its remarks regarding future industrial land needs and sufficiency of the City's Urban Growth Boundary to ensure a reasonable estimate of industrial land inventory necessary to support good jobs and amenities in the future that create a high quality of life for McMinnville residents.

MIP advocates for a robust industrial lands inventory that accomplishes the City's Strategic Plan priorities by providing enough flexibility to foster an attractive business climate, positioning McMinnville's businesses for modern development and investment, and utilizing the City's strengths to encourage a sustainable economy for future generations.

MIP was incorporated in 1953 in response to the closure of two large manufacturers in the area, a devastating loss at the time of approximately 350 jobs. Also facing a slowdown in the timber industry, a local group of business and professional leaders pledged their own money to attract new businesses to McMinnville and diversify its economic base. In 1955, the corporation was expanded to a community corporation, and ultimately it progressed to a for-profit corporation a year later. Regardless of its structure, MIP has never lost sight of its initial mission and special corporate purpose- to foster, encourage, promote, and improve the industrial, commercial, and physical development of the City of McMinnville. MIP seeks to support the continuation of present businesses, but also attract new industries that strengthen the community as a whole, provide long term economic stability to the area, and which provide living wage opportunities to residents. Over the last 67 years, MIP has invested and assisted in growing industrial businesses. Notable accomplishments of MIP include being the first industrial development company in the Pacific Northwest to qualify for Small Business Administration funds, which was recognized when nine different industrial projects broke ground in McMinnville in 1969. In addition, MIP formed a unique partnership with the City of McMinnville to acquire and develop the major industrial park infrastructure in 1983. MIP has and continues to play a unique role in business and industrial real estate development in the City.

There is no denying that McMinnville is uniquely situated. While the City is disadvantaged due to its relatively far location from a major metropolitan area and its airport (PDX) (approximately 60 miles away), it has developed into an economic hub nonetheless. The availability of ample water and electricity at a low price continues to make the City attractive for businesses to locate to a more rural area and provides occupational opportunities to McMinnville and the surrounding communities. Encouraging vibrant and diverse businesses has created economic collaboration and resiliency, which should be prioritized and maintained if McMinnville is to continue to be an economic engine in Yamhill County. As such, MIP is a proponent of protecting currently industrially zoned properties and supports the future planning for expansion of the industrial zone.

The availability of shovel-ready industrial employment lands is critical to expanding and attracting businesses that provide high-wage jobs. The City has forecasted that employment in the industrial area will grow by approximately 27% over the next 20 years. In that analysis, it is determined that approximately 153 buildable acres are needed to account for and service this growth by 2041, and upwards of 329 buildable acres are needed by year 2067. Currently, 323 acres are part of the overall identified inventory.

The foregoing indicates that McMinnville has just barely enough gross industrial lands inventory for its needs over the next 40 years. However, simply looking at the gross numbers provides an inaccurate and incomplete picture of the location and suitability of the currently zoned industrial sites and does not account for the various development costs associated with many of those acres. 177 of those buildable acres are concentrated in two large tax lots located on the Three Mile Lane corridor, 89.6 and 87.5 acres respectively. There are significant and very costly barriers to the development of this land. First and foremost, ODOT has been fiercely protective of preserving the Hwy 18 McMinnville bypass, and costs of developing the public improvements to accommodate ODOT's requirements would be substantial (and not possible for most buyers). Other hurdles to overcome include actual acquisition of the property, time for site readiness, site planning, and additional infrastructure and improvement changes. The costs associated with the 177 acres has impeded industrial development of this property and will likely continue for the foreseeable future.

Also, due to the fact that the majority of growth and development in the industrial sector has occurred, and continues to occur, on parcels between 0.5 and 10 acres in McMinnville (and on 25 acres or less statewide), having more than half of the industrially zoned lands tied up on two parcels has made it impractical for business placement or relocation to the Three Mile Lane area. As such, growth is constrained with available parcels located in the industrial park unless a second industrial area is constructed with the needed infrastructure, which is unlikely at this time.

Finally, it is also very possible that owners or developers of either or both of these large parcels will ultimately seek rezoning to respond to the current severe deficit of lands available for residential development or commercial requirements located within the Urban Growth Boundary.

As such, only 146 acres are reasonably and realistically available for development in the core industrial area. If the type and character of available sites are taken into consideration, McMinnville actually has a large deficit of available and buildable industrial lands that will not meet its needs even in the next 20 years. With this, McMinnville risks local businesses leaving, or the encroachment of industry into other neighborhoods, resulting in safety and other nuisance concerns.

It has been the collective experience of MIP's leadership that the majority of companies looking to locate here in McMinnville need small parcels (0.5-5 acres in size) for development. In fact, MIP has partitioned many of its larger holdings for sale to businesses looking to build on smaller parcels. MIP has seen this type of development crucial to its mission. Industries in close proximity cultivate a vibrant manufacturing sector by offering differentiated as well as supportive services and products. Additionally, a mixture of locally owned businesses allow for the community to weather ups and downs throughout the business cycle, and not be dependent on a few large employers. If readily and economically developable industrial lands hit a ceiling, McMinnville is in danger of losing businesses that would otherwise integrate into and diversify the economic base. Not only would business opportunities be stifled, but would also consequentially result in lost or lower wage jobs.

Recently, MIP has negotiated transactions that proposed developing between 20-30 acres of property. While there is not a tremendous immediate need for sites between 10-30 acres, MIP sees the importance for these options to be included as part of the overall land inventory to accommodate and attract various future developments. After reviewing the State of Oregon Industrial Development Competitive Matrix, it is clear that to be competitive in all fields of manufacturing (including high tech), light industrial uses, warehousing and distribution, and other specialized uses, the most common requested site size is between 5-25 acres. As such, in order to stay competitive with the rest of the state, McMinnville will need to have a variety of industrial sites that are readily and economically developable.

McMinnville needs a sufficient industrial land inventory with a larger variety of different-sized parcels to continue to cultivate business growth and infrastructure development. This can only be done by steadfastly preserving the current zoning of industrial properties, and by the City expanding its Urban Growth Boundary to increase industrial acreage.

Further, if the City considers rezoning the Three Mile Lane parcels for a use that could justify the significant costs of infrastructure, the City must first increase the number of readily buildable industrial lands in its Urban Growth Boundary to accommodate industrial needs over the next 40 years, ensuring there is no net loss of lands available for industrial uses.

Thank you for your consideration.

Respectfully Submitted,

Doug Hurl, President

Appendix E. Public and Institutional Land Need

MEMORANDUM

DATE: November 13, 2019
TO: Economic Opportunities Analysis PAC and Public Lands Work Group
FROM: Tom Schauer, Senior Planner
SUBJECT: Public & Institutional Lands - ***Update***

This memo provides updated information about land needs presented in a previous memo dated October 9, 2019. It summarizes the public and institutional land needs that aren't addressed through the employment forecast. Staff is seeking a recommendation from the Workgroup for the remaining identified needs which are presented in this memo as "updated" or "new" and summarized in Figure 1. The Workgroup's recommendation will be provided to the Project Advisory Committee, and would complete the Workgroup's work.

Summary – *New*

Public and institutional land needs calculated separately from the employment forecast are summarized in ***Figure 1*** below, and more detailed information follows.

Figure 1. Estimated Public and Institutional Land Needs

Organization/Sector	Add'l Land Need By 2021	Add'l Land Need 2021-2041 (ac)	Add'l Land Need 2041-2067 (ac)	SUM Through 2067 (ac)	Method/Notes
City of McMinnville (non-parks), 1	0	7	4	11	4.5 ac for fire stations plus 0.26 ac/1,000 pop
City of McMinnville (parks), 2	27	365	214	606	Parks Master Plan LOS

State of Oregon	0	1	1	2	0.08 ac/1,000 pop
Federal Government	0	2	2	4	0.14 ac/1,000 pop
Churches	6	32	44	83	2.88 ac/1,000 pop
Other	0	0	0	0	
SUM	**33**	**444**	**303**	**780**	

Note 1: Site needs for fire stations are inlcuded in 2021-2041 calculation

Note 2: Needs for 2021-2041 include current deficit

General: Figures above don't reflect additional needs if direction of growth absorbs additional sites outside UGB needed/required for services

Background

Certain land uses don't lend themselves to forecasting land needs by use of an employment forecast and employment density assumptions. At a previous meeting, information was presented about public and institutional organizations and lands. Preliminary data was presented about calculations using a ratio of acreage per 1,000 population that can be used to forecast site needs. However, this method isn't always applicable to each of these entities. Following the September 5, 2019 PAC Meeting #2, staff held meetings with representatives of public and institutional organizations to discuss land needs and methods. This memo summarizes the results of the meetings and summarizes some information discussed at the last PAC meeting.

City of McMinnville – *Updated*

- **General, Misc. City Departments: (Administration, Office, Police, Public Works, Fleet, Library, Recreation Buildings, etc.).**
    - Planning staff met from representatives from respective City departments to discuss land needed by the City of McMinnville. Currently, there is no formally adopted plan outlining space needs and plans for existing and future building/facility needs for the planning periods.
    - The City Manager indicated that a ratio of current acreage per 1,000 population would likely over-estimate the City's future land needs. Given existing facilities and site arrangements, there are opportunities to consolidate facilities, redevelop/expand onto existing city sites, use land more efficiently, grow into more recent expansions that retain capacity, etc.
    - With a forecast population of about 48,000 in 2014 and 63,000 in 2067, it is not expected that the City would grow to a size that would necessitate substantial branch facilities or satellite locations during the planning period (such as a library branch etc.).
    - The City Manager and Engineering Staff suggested that base year acres/1,000 population data from cities of approximately 48,000 population and 63,000 population corresponding to the future panning horizon year population for McMinnville might help inform ratios associated with McMinnville's future land needs.
    - ***Update.*** Data for cities of approximately 48,000 and 63,000 population was analyzed for comparison. ***Figure 2*** shows a summary of data for comparison cities – including cities for which data was not available. As noted above, the City Manager and Engineering Staff suggested that a straight-line ratio of acres per 1,000 population might overestimate needs. Therefore, staff used only the portion of City lands with facilities exclusive of the airport, floodplain, and utility sites for estimating additional City land needs. (Parks were calculated separately). Approximately 18 acres of the 83.1 City acres is non-utility facilities. Only that portion was used for calculating future needs. That portion had a 0.51 ac/1000 population ratio. Since it was assumed a straight-line extension would overestimate needs, staff used half of that ratio (0.25 ac/1000 population), and the specific information for fire station sites noted below was added to that estimate.

Figure 2. Ratio Information Available from Other Cities

City	Ratio (acres per 1,000 pop)
Redmond 2005 (total)	110 ac/1000 (calculated) 10 ac/1000 (assumed need)
McMinnville 2019 (less parks, airport, floodplain)	2.38/1000
McMinnville, 2019 (less parks, airport, floodplain, utility sites)	0.51/1000
Corvallis	No additional land need identified, didn't list ratio
Albany	Not readily available
Springfield	Not readily available
Medford (less parks)	1.5/1000

- **Fire:**
  - The Fire Department anticipates transition from a single downtown station to three satellite stations at approximately 1.5 acres each: (1) Baker Creek/Hill Road area, (2) Airport area, (3) Northeast area. The estimated need would be about **4.5 acres for three substations.** There could be opportunities to co-locate police substations at sites. There is potential that they could be co-located on sites with other uses. The NE station may be within the current UGB or may be further to the northeast. There is potential for the current station to be re-used for other municipal or other uses.

- **Police:**
  - **No specific plans for new facilities.** Their needs can be accounted for as part of the overall City need using the same methods.

- **Airport:**
  - **No additional land needs identified.**

- **Sewer:**
  - **Treatment: No additional land needs anticipated.** The City owns 5 tax lots with approximately 70 acres east of the UGB where the sewer treatment plant is sited. No additional land need is anticipated. There is capacity to expand the treatment plan on the existing site. If there is a UGB expansion to east which includes this area, these properties won't be available for buildable land for other uses.

  - **Collection System: No significant additional land demand is assumed outside of the public right-of-way, so no calculation has been added or assumed for this de minimus need.** Minimal needs for future pump stations may be needed for new development. Site needs for small pump stations are similar to or smaller than a residential lot. The land needs for these facilities are relatively small and no additional acres are proposed. Depending on direction of growth, there could be needs for larger pumping facilities.

- **Parks:**
  - The Comprehensive Plan includes the following policies:
    - **159.00.** The City of McMinnville's Parks, Recreation, and Open Space Master Plan shall serve to identify future needs of the community, available resources, funding alternatives, and priority projects
    - **163.05.** The City of McMinnville shall locate future community and neighborhood parks above the boundary of the 100-year floodplain
    - **170.05**. For purposes of projecting future park and open space needs, the standards as contained in the adopted McMinnville Parks, Recreation, and Open Space Master Plan shall be used
  - The Master Plan level of service (LOS) standard is 14 acres/1,000 persons.
  - The 2017 UGB population was 34,293.
  - The City has approximately 273 acres of developed park land and 76 acres of undeveloped park land, totaling about 349 acres ***(See attached).***

- The 2017 need was approximately 480 acres; there's a deficit of approximately 207 acres of developed park land.
- Need for 665 total acres by 2041 (an additional need of 185 ac, or total of 392 ac with the current deficit
- Need for 879 total acres by 2067 (an additional need of 399 ac, or total of 606 ac with the current deficit. *(**Note:** This was listed as 660 acres in the previous memo, which was a typographical error).*
- Absent joint use agreements with other entities for public use of facilities consistent with the needs identified in the Park Master Plan, park sites and recreational facilities that aren't city-owned aren't assumed to meet the LOS for developed park needs. If there are separate standards for open space, that may be evaluated.

Note: *The committee made a recommendation on park needs at the October meeting. Following the last meeting, Mark Davis submitted a memo and asked that it be distributed to the committee. The memo is attached for the record.* ***Attachment 2***

- **Other (stormwater):** While no specific need was identified, there was a sense that stormwater detention and water quality standards would likely increase the amount of land that will need to be dedicated for on-site stormwater management (detention and treatment) as best practices seek to manage stormwater close to "where the rain hits the ground" to reduce peaking of down stream flows and conveyance of sediment and/or contaminants in runoff. These sites may be privately or publicly owned and maintained, but should be accounted for.

- **Other (transit related):** There was a sense that, as the community grows and the transit system expands and matures, it expected that there will be a more robust transit system with some additional land needs.

Planning Staff met with representatives of the following organizations regarding their future land needs.

<u>McMinnville Water & Light (MWL):</u>
Estimated need of 21-24 acres for the 20- and 46-year periods, plus additional location/development specific needs

- General: It is estimated that in addition to sites already owned by MWL, they will need approximately 21 additional acres for power and water, and may have additional needs that are dependent on specific growth characteristics and developments. Some users require an on-site substation that requires a site and land. If growth occurs to the west further upslope into the west hills, that might include the 3-acre reservoir site needed to serve water pressure Zone 2, and could necessitate an additional reservoir/site if growth continues far enough upslope to result in a Zone 3 service area.

- The additional 21-acre need includes 16 acres for a treatment plant and pumping facilities which could co-locate with a power substation in the easterly portion of the UGB; an additional 2 acres in the easterly UGB area for power, and an additional 3 acres in the westerly UGB for additional storage for fire flow.

Yamhill County - *Updated*

- Currently, there is no formally adopted plan outlining space needs and plans for existing and future building/facility needs for the planning periods.
- The acreage per 1,000 population estimate is a reasonable method, first deducting the fairgrounds property before calculating the ratios. The Fairgrounds is approximately 36 acres of a 44-acre site.
- Current county-owned sites don't allow for much incremental on-site expansion, so additional capacity would likely require redevelopment or expansion onto additional land.
- Transit may have a need for expanded bus parking/storage area that doesn't require new structures
- Locational analysis: The County Parks Master Plan identifies potential lands for parks at key locations in proximity to McMinnville near confluence areas shown on vision map in the Master Plan)
- ***Update.*** The County owns approximately 44 acres in the UGB, including the Fairgrounds. The 36-acre Fairgrounds site includes other uses including County Public Works, which occupies about 7 acres. Therefore, approximately 29 acres of County-owned land was deducted for the Fairgrounds before calculating the ratio of acres per 1,000 population, leaving 16 acres remaining, which is approximately 0.5 acre/1000 population.

Chemeketa Community College

No new land needs. Chemeketa Community College sold the property they previously owned, the former campus site, on Hill Road. Their McMinnville campus on Norton Lane houses their facilities as well as commercial and office tenants. For planning purposes, Chemeketa doesn't anticipate new land needs beyond their current ownership, and doesn't anticipate displacement of tenants.

Linfield College

No new land needs. Linfield College doesn't anticipate new land needs beyond current their ownership during the planning period. They recently sold a portion of the property to MV Advancements. For planning purposes, the City should not assume non-college use or sale of further property during the planning period.

McMinnville School District - *Updated*

In addition to existing schools, the School District owns three reserve sites for future schools. Below is a summary of needs in addition to existing schools and reserve sites. In addition to these sites, the School District estimates it will need 40 additional acres for future school sites, with 10 of those additional acres needed between 2021 and 2041, and 30 of those acres needed between 2041 and 2067. ***See Attachment 1***.

2021-2041

- The need is for one additional 10-acre early learning center site.

2041-2067

- The need includes one additional 12-acre elementary school site.
- The need includes an additional 18 acres for a new high school, in addition to the 42-acre site on Hill Road, whether that site could be added to for a total of 60 acres or whether that site would be sold and a new 60-acre site acquired.

Other Land Needs *- Updated*

Other public and semi-public land needs presented in ***Figure 1*** which aren't part of the employment forecast were calculated using the ratios in ***Figure 3.***

Figure 3. Other Existing Ratios for McMinnville, 2019

MEMO

DATE: November 14, 2019
TO: City of McMinnville Public Lands Work Group
From: Susan Escure, McMinnville School District Finance Director
Subject: Land Needs Assessment - Public Schools

Introduction

Currently the District does not have an adopted plan for school facility needs for the periods going out the 50 years needed by the urbanization study. The District is in the process of updating our Long-Range Facilities Plan which will not be formally adopted until next year. In 2017, The District contracted with Flo Analytics to prepare a 5 year and 10 year enrollment forecast with a more in depth study of enrollment within our elementary boundaries. This study provided information for our most recent boundary changes adopted for the 2019-20 school year. The following land needs assessment is based upon a combination of the demographer report, our internal enrollment projections and decisions made as part of our 2016 capital bond project.

Flo Analytics Enrollment Forecast

Our demographer's forecast was limited to 10 years. However, it did take into account planned developments within the District. The District is projected to capture 84.4% of the District population of all school-age children. Overall average student yield factors applied to new housing development are 0.45 students/Single Family Unit and 0.20 students per Multi-family Unit. The following is a summary of their 5-year and 10-year forecast:

October 1	2017	2022	2027
Elementary	3,047	2,969	3,103
Middle School	1,541	1,587	1,550
High School	2,176	2,347	2,159
Total	**6,764**	**6,902**	**6,813**
% increase over 2017		2.0%	.7%

Internal Projections

The District uses a 3 year or 8 year average cohort survival rate to forecast increases in enrollment for grades 1-12. The increase in these grades are due to in-migration and enrollment of students from private schools and home school as they age. This cohort survival rate across all grades = 2% increase in enrollment annually. Kindergarten enrollment is based on a historic average capture rate of 40% of the county births five years prior. For 2025 and after, the kindergarten enrollment increase is projected at 1%. Student enrollment counts are attendance-based not residence-based. Enrollment includes intra-district transfers from neighboring districts. Additionally, the enrollment projection includes attendance of all District students, not just those located within the City of McMinnville.

October 1 Enrollment Projection	2017	2019	2021	2041	2067
Elementary	3,047	2,885	2,883	3,281	4,252
Middle School	1,541	1,686	1,596	1,650	2,138
High School	2,176	2,130	2,251	2,263	2,934
Total	**6,764**	**6,701**	**6,730**	**7,194**	**9,324**
(Decrease) Increase over 2017		(63)	(34)	430	2,560
% (decrease) increase over 2017		(0.9%)	(0.5%)	6.4%	37.8%
Average Annual Growth Rate		(0.5%)	(0.1%)	0.3%	0.8%

Capacity

The following capacity estimates are based on current class size and programs. If future funding allows the District to substantially decrease class size or increase programs, these capacities would be less. Additionally, classroom modulars are used at some school sites and they are included in the calculation of our current capacity. The District foresees the need to add on to the current school sites to increase classroom space for additional programs and replacement of classroom modular before adding schools for enrollment growth, especially at the elementary level.

Property held for future school sites:

Hill Road & Cottonwood Drive	11 acres	Future Elementary Site
McDonald Lane, next to Grandhaven	26 acres	Future Middle School Site
Hill Road property	42 acres	Future High School Site

Elementary School Capacity

Elementary schools are configured for grades K through 5 with a capacity of 600 each. Currently there are six elementary schools which totals a maximum capacity of 3,600. For purposes of this land needs assessment, we are assuming a per school capacity ranging from 550 to 600 to account for pre-school and/or additional program needs.

Elementary school sites are on average 10 to 12 acres. The District currently holds property at Cottonwood and Hill Road for a future elementary site. The District would need to purchase one more 8-10 acre site by end of 2067 according to this projection.

Middle School Capacity

We currently have two middles schools with a maximum capacity of 900 each configured for grades 6-8 for a total capacity of 1,800. There is a wave of larger cohort classes in middle school currently, however, future cohorts entering middle school are expected to decrease and remain lower until 2041 – 2067.

The desired middle school is approximately 20 acres. The District currently holds 26 acres on McDonald Lane adjacent to Grandhaven Elementary for a future middle school site. No additional acreage is needed for a middle school site before 2067.

High School Capacity

Our current high school configuration after the 2019 Addition has a maximum capacity of 2,800 students. Approximately 160 students are served off site at the alternative program at Cook School and the online program at Adams Campus Based on this projection, the high school would not reach maximum capacity until 2060-65.

In 2015, the Long Range Facilities Task Force recommended to the School Board to continue the High School Master Plan proposed in 2006 to the voters which included a plan to rebuild the high school at the current site over three phases. The first phase was completed in 2010, the second phase was just completed in 2019 with the addition of a Career Technical Center. Although many constituents desire two small high school versus one large high school, current school funding does not cover the cost of operating two high schools. (Operating costs include costs such as: utilities, maintenance, administration and support staff). The high school enrollment would need to grow to almost 3,000 in order for the District to afford the operation costs of two comprehensive high schools (1,500 each).

During this planning period, the committee also looked at building a new high school at the Hill Road location and repurposing the current high school property. The committee decided against this for several reasons: 1) the District would need to ask voters for a significant increase over the current school capital bond rate, 2) the Hill Road site is only large enough for a high school of 2,300-2,500, which could be outgrown before the District could afford a second high school, and 3) the Committee felt that the District should continue with the plan that the voters had already approved in 2006.

The District currently holds 42 acres on Hill Road as a future high school site. A larger site of closer to 60 acres may be more desirable in order to include additional space for career technical programs. In addition, satellite sites may be needed for increased professional technical classes such as home construction or HVAC certification.

Summary

Based on our enrollment projections as described, the District projects the need for the following additional school buildings during the periods 2021-41 and 2041-2067.

Number of Schools	Current	2021-2041	2041-2067
Elementary & Early Learning Center	6	+1	+ 2
Middle School	2	0	+ 1
High School	1	0	+ 1
Total	**9**	**+1**	**+ 4**

After taking into account current property held for future use, the District projects the following land needs:

- **An additional site of 10 – 12 acres for an Elementary School.**
- **A larger 60 acre high school site for a second high school.**
- **An additional 8-10 acre site for an Early Learning Center.**

ATTACHMENT 2

Memo

Date: October 28, 2019

To: Public/Semi-Public Lands Work Group

From: Mark Davis

Subject: Park Land Needs

McMinnville is in the process of projecting its future land needs. These plans must have an adequate factual basis. The projections must be supported by evidence that establishes some likelihood that the projections will be realized and that the plans will be implemented.

At the last meeting I raised objections to the proposed addition of 392 acres of land for City parks over the next 20 years because there was no plan for funding or implementation. The acreage calculation is based on a recommendation in the outdated Parks Plan that the City should have 14 acres of parks per thousand residents, a number we failed to reach by 1999, so in addition to building parks for new residents we were supposed to have built additional parks over the last 20 years to erase this deficit. Due to the chaotic nature of the discussion that followed my comments and the fact that not all members of the Work Group were present, I would like to clarify the points I was trying to make at that time.

The Parks Plan: The McMinnville Parks, Recreation and Open Space Master Plan (commonly referred to as the Parks Plan) was adopted in 1999. It explicitly covered a 20-year period that ended in 2019 and therefore cannot be relied upon to justify land needs through either 2041 or 2067. At the public gathering that preceded its adoption, where citizens were asked to brainstorm their ideas for the Parks Plan and put dots next to the ones they liked, several persons asked, "How is this going to be paid for?" We were repeatedly told that we did not need to worry about cost because the City Council had the job of figuring out how to pay for it. As a result the so-called "plan" reads more like a "wish list." It carried an estimated price tag in 1999 dollars of over $52 million. The actual park funding over the past 20 years came from a $9 million bond measure and a relatively small amount of SDC dollars.

What Got Built: Since 1999, the city added only about 50 acres of parks.[1] About 10,000 persons were added to the City's population in the last 20 years. Per the Parks Plan 14 acres per

[1] The 1999 Plan showed 273.66 acres of existing parks in Tables A-1 and A-2. The total acreage today as shown on the staff memo dated 10/10/19 is 348.57 acres, suggesting that we added about 75 acres in parks. However, it appears that some corrections were made to the 1999 data, as City Park then was 13 acres but today is shown as 16.79 acres, and Joe Dancer Park was formerly 85.38 acres but now counts as 107.62 acres. Correcting for these changes implies about 50 acres were added, and when we look at what was actually developed (Discovery Meadows, Riverside Dog Park, Chegwyn Farms, Heather Hollow, Jay Pearson, Thompson and West Hills), those new parks total about 45 acres, suggesting 50 acres is about right.

thousand standard, we should have added 140 acres of parks. We achieved only about one-third of the goal, to say nothing of making up the deficit because we were far under the 14 acres/1000 for the existing residents and were proposing to make up that deficit also. So, when we look at the 392 acres proposed this time, only about 180 acres is for the projected population increase. The balance is to make up a purported deficit that grows every year. Based on the evidence of what actually happened in the past 20 years, there is no reasonable basis to expect that the additional 392 acres the city proposes to urbanize will actually develop as parks over the planning period.

How the Schools Fit In: Table A-3 in the Parks Plan is a Facility Inventory: School Facilities. The Plan repeatedly calls for creating joint use agreements with the School District to share lands, thus reducing the need for the City to develop more park land. The School District representative at our meeting acknowledged that they do not lock their facilities and accept public use of the school grounds when school activities are not ongoing. This is not a complete solution to the clear need for more park land, but even without a formal joint use agreement (a high priority 20 years ago that never got done) it is obvious that some portion of school grounds will be used for park-type activities, much like it has for the past 50 years. This needs to be accounted for in the city's projection.

The Comp Plan Policies: All three of the Comprehensive Plan Policies cited in the 10/10/19 staff memo regarding the need for park land were adopted after I made similar objections to the unrealistic park land projections in the last UGB expansion attempt. At this point declaring a Parks Plan that has expired and was not implemented as the basis for an even bigger ask for park land makes no logical sense. Further, policy 163.05 excluding waterways that may flood from any community or neighborhood park would preclude including a creek in the park like we now have at City Park and Wortman Park. Is it really good park planning policy to keep all water features out of our bigger parks? Sure, we don't want our bathrooms and permanent park facilities to get flooded, but having a mixture of natural features surely makes a park more inviting.

Financial Reality: At present the City is considering building a new combined Aquatic/Community Center at a price tag that could exceed $50 million based on a recent consultant's report to the City Council. The reason the Council is considering the new facility is that making repairs to the existing pool and community center buildings cost almost as much as a new facility. So, regardless of how this process works out over the next few years, the Parks and Recreation Department is looking at tens of millions of expenditures on facilities. Looking at the estimates in the Parks Plan and adjusting them for current costs suggests that adding 392 acres of parks is going to cost over $100 million.

McMinnville voters are responsive to reasonable requests for public facilities and voted for a 20-year, $9 million parks bond that has financed most of the improvements in park lands we have seen since 2000. Based on the Council conversation it appears that when the parks bond expires

in 2021 the City will be considering using that bonding capacity for the new Aquatic/Community Center. If so, where is the money going to come from to develop 392 acres of parks, to say nothing of paying for the ongoing maintenance of that much land?

City Responsibility: This park land figure is the one area in the upcoming UGB expansion proposal that the City actually controls. We can make our best estimate of how many housing units, commercial buildings and industrial sites we need over 20 years, but there is no way to know how the private sector will respond. On parks the people finally approving the UGB expansion (i.e. the City Council) are also the body that will authorize the development of all City parks, presumably after getting public approval of a bond measure. Our history with the expired Parks Plan does not suggest that passing the buck to the future will result in the parks getting built. We need a realistic plan for funding also.

Conclusion: I am not opposed to adding lands for parks. I support that goal. However, it takes more than simply increasing the number of acres of land inside the UGB or pointing to an aspirational standard. It takes a real plan that describes the types of parks to be built including their cost and the sources of funding to get that many acres of park land developed. I do oppose an unrealistic increase in overall land need based on a purely aspirational projection of park land that lacks any historical evidence.

I also want to make clear that my statements are not a criticism of Susan Muir, Jay Pearson or any of the hardworking park staff members. I am confident that were the financial resources made available to develop more parks that our Parks and Recreation Department would eagerly expand our inventory of parks.

DRAFT

McMinnville Urbanization Report:

Housing Needs Analysis and Economic Opportunities Analysis

JUNE 2020

ECONorthwest
ECONOMICS • FINANCE • PLANNING

TABLE OF CONTENTS

MCMINNVILLE URBANIZATION REPORT: SUMMARY

The City of McMinnville is in the process of reviewing future land needs and sufficiency of its Urban Growth Boundary (UGB) to meet those needs for a 20-year planning period beginning in 2021, the earliest date by which the City would have a program in place to meet the identified needs.

This evaluation process requires several technical studies. These include:

- a housing needs assessment (HNA) and residential buildable land inventory,
- a Goal 9 compliant Economic Opportunities Analysis (EOA) and an employment buildable lands inventory, and
- an assessment of public and institutional land needs (e.g., parks, schools, etc).

These analyses allow the City of McMinnville to assess whether there is sufficient land within the Urban Growth Boundary (UGB) to accommodate land needs for the 20-year period between 2021-2041. The purpose of the Urbanization Report is to (1) evaluate growth forecasts; (2) inventory how much buildable land the City has; (3) identify housing needs; (4) identify economic development strategies; and (5) determine how much land the City will need to accommodate growth between 2021-2041.

McMinnville is growing. The official population forecast projects that McMinnville will grow at 1.36% annually adding 11,260 new residents during the 2021-2041 period. This translates into a need for 4,657 new housing units.

New Population
11,260

New Employment
6,885

New Housing Units
4,657

McMinnville's has a serious deficit of housing on both sides of the affordability spectrum — low income and high income, which suggests a need for a wider range of housing types for renters and homeowners. About 36% of McMinnville's households are cost burdened (paying more than 30% of their income on housing), including a cost-burden rate of 52% for renter households. Without diversification of housing types, lack of affordability will continue to be a problem — possibly growing in the future if incomes continue to grow at a slower rate than housing costs.

McMinnville's UGB will not accommodate all of McMinnville's housing needs. Over the planning period through 2041, McMinnville has a deficit of capacity for 3,053 dwelling units, which means the City has an approximate deficit of about 576 gross residential acres through 2041. To accommodate employment growth McMinnville will need about 741 gross acres for employment for the 2021 to 2041 period (384 industrial acres and 357 commercial acres). Finally, McMinnville will need an additional 473 acres in the 2021 to 2041 period for public and institutional uses (e.g., parks, schools, infrastructure, churches, etc.)

MCMINNVILLE NEEDS 1,399 ACRES TO ACCOMMODATE GROWTH THROUGH 2041

The land needs analysis indicates the City will need an additional 576 acres for housing through 2041. The City also needs about 280 acres for commercial employment and 70 acres for industrial employment through 2041.

	SURPLUS (DEFICIT)	
LAND USE TYPE	IN 2041	IN 2067
Residential	(576)	(1,481)
Public or Institutional	(473)	(780)
Industrial	(70)	(70)
Commercial	(280)	(494)
Total	**(1,399)**	**(2,825)**

Source: ECONorthwest

INTRODUCTION

The City of McMinnville is in the process of analyzing whether it has enough land to accommodate future growth. McMinnville last reviewed its Urban Growth Boundary (UGB) in 2007-08. The UGB is the line that determines the outer extent of urban growth in McMinnville. McMinnville is growing — between 2000 and 2019 the city grew by 28% adding 7,431 new residents. Growth is forecast to continue — McMinnville is projected to grow to 47,498 in 2041— a 29% increase over the 2019 population.

This report is the culmination of several years of work. It summarizes the results of two longer technical reports and a series of memoranda that evaluation different elements of land need and supply in McMinnville:

- **City of McMinnville Housing Needs Analysis (HNA)** presents the full results of the housing needs analysis (HNA) for McMinnville and is intended to comply with statewide planning Goal 10 (housing) and Oregon Administrative Rule (OAR) 660-008. It includes an inventory of buildable residential lands in McMinnville and an estimated of new housing units needed to accommodate forecast population growth.
- **City of McMinnville Housing Strategy**, presents recommendations and implementation actions intended to result in policy changes that provide opportunities for development of housing to meet McMinnville's identified housing needs.
- **McMinnville Economic Opportunities Analysis (EOA)** Update, includes a buildable lands inventory of commercial and industrial lands within the Urban Growth Boundary (UGB), an analysis of commercial and industrial land needs for the next 20 years (and longer), and a determination of sufficiency of whether the buildable lands in the UGB will meet the 20-year identified needs.
- **Public and Institutional Land Needs**, estimates other land needs that are not addressed in the HNA and EOA documents. This includes parks, schools, churches, cemeteries and other public and Institutional land needs.

City staff and ECONorthwest staff worked with the Housing Needs Analysis Project Advisory Committee (HNAPAC) to review the results of the Housing Needs Analysis and develop the Housing Policy and Actions and the Economic Opportunities Assessment Project Advisory Committee (EOAPAC) to review the results of the Economic Opportunities Analysis and public/institutional land needs.

This report is organized by the following sections:

- **Buildable Lands Inventory**
- **Housing Needs Analysis**
- **Economic Opportunities Analysis**
- **Public and Institutional Land Needs**

Overview

The buildable lands inventory (BLI) provides a basis for analysis of development capacity on residential, commercial, and industrial land in the City of McMinnville. Legal requirements govern the development of the BLI. The Housing Needs Analysis and Economic Opportunities Analysis provide detailed methods, definitions, and results from the BLIs for residential, commercial, and industrial land.

Residential Buildable Land

McMinnville has 643 acres of residential land that is vacant or partially vacant. The majority of McMinnville's buildable land (344 acres) is county-zoned land, which is not available for urban densities until they annex. In addition, some of McMinnville's buildable land (133 acres) is in Water Zone 2, most of which is not likely to be served with water for 10 years (about 2030).

MCMINNVILLE'S BUILDABLE VACANT AND PARTIALLY VACANT RESIDENTIAL LAND, BY ZONING DISTRICT, 2019

643 total acres 1 square represents 12 acres

344 acres, County Zoning
138 acres, R-1 Zoning
132 acres, R-2 Zoning
6 acres, R-3 Zoning
18 acres, R-4 Zoning
5 acres, C-3 Zoning*
0 acres, O-R Zoning

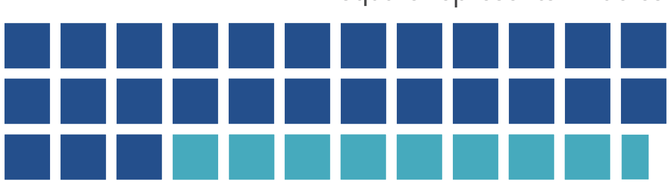
*C-3 buildable acres are assigned to employment uses

Commercial and Industrial Buildable Land

McMinnville has 421 acres of vacant and partially vacant land in commercial and industrial comprehensive plan designations. Of this land, 324 acres of McMinnville's vacant land is in industrial designations and about 97 vacant acres is in commercial designations.

MCMINNVILLE'S BUILDABLE VACANT & PARTIALLY VACANT COMMERCIAL & INDUSTRIAL LAND, BY ZONING DISTRICT, 2019

421 total acres 1 square represents 12 acres



324 acres, Industrial **97 acres,** Commercial

Definitions

Buildable Land:

Unconstrained vacant and partially-vacant land designated for residential, commercial, or industrial development.

Vacant Land:

Unconstrained suitable land designated for residential, commercial, or industrial development.

Partially Vacant Land:

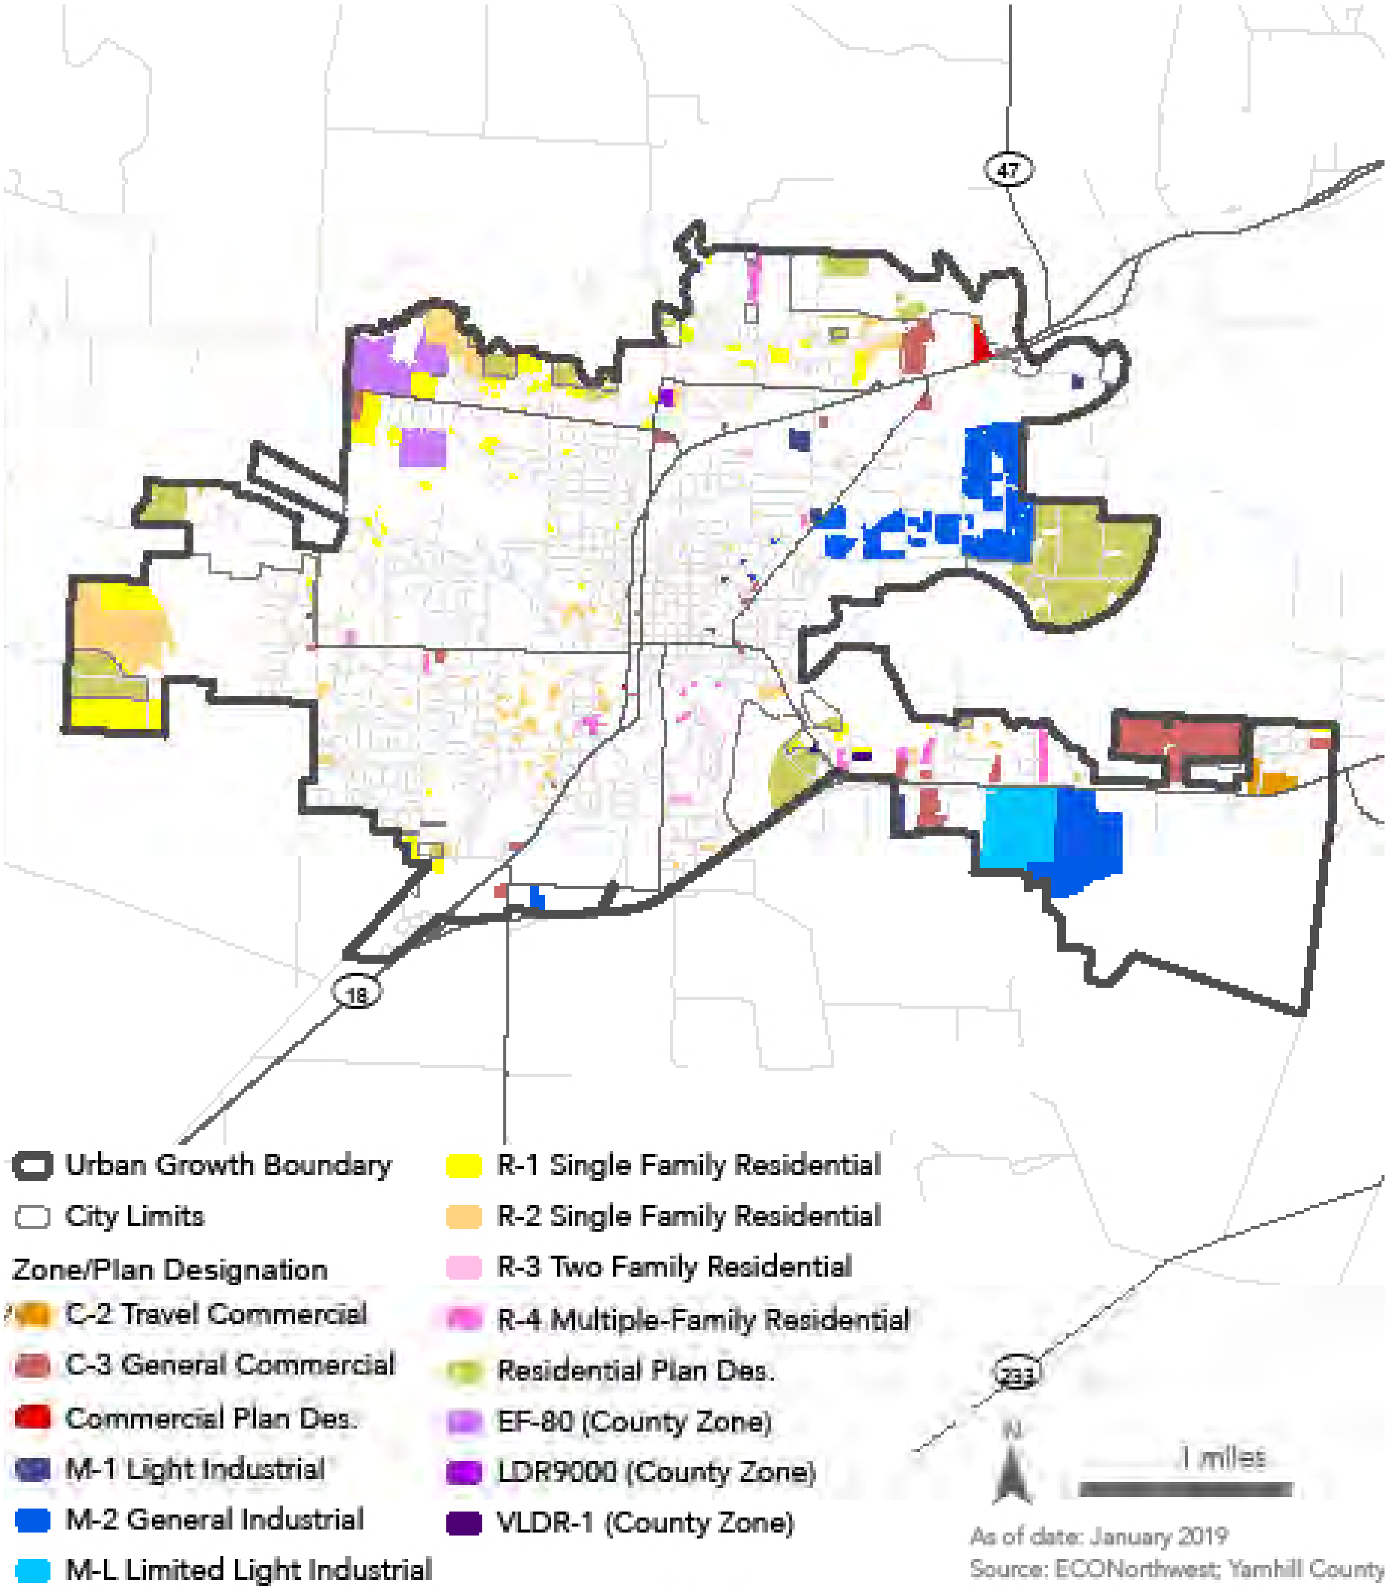
Unconstrained suitable land with enough land to could support additional residential, commercial, or industrial development under the existing zoning standards.

Constrained land:

Land that is not available for development based upon one or more factors such as environmental protections, such as flood plain or wetlands.

McMinnville Buildable Lands Inventory

Vacant and Partially Vacant Residential, Commercial, and Industrial Land by Zone (or Plan Designation)



Housing Needs Analysis

McMinnville is in the process of updating its Housing Element of its Comprehensive Plan and zoning code. McMinnville has changed substantially over the last three decades. The community welcomed nearly 7,431 new residents from 2000 to 2019 and continues to be a growing city. In 2019, McMinnville had a population of 33,930 people. While the community makes up about one-third of Yamhill County's total population, McMinnville has grown at a much faster rate than the County.

As the region (including McMinnville) continues to grow, housing affordability is becoming a growing concern to residents. Some people in the community are finding it difficult to access housing that is affordable and also meets their family's needs.

As McMinnville grows, the City needs to take stock of how much land is available to accommodate new homes and reevaluate the City's development policies. The City needs to look at what types of housing (single family homes, townhomes, apartments, etc.) to encourage in different areas of town. The City also needs to evaluate whether its existing development policies, like the zoning code, provide opportunity for development of a range of housing types that are affordable to people who live and want to live in McMinnville.

The Housing Needs Analysis provides information about the factors that may affect residential development in McMinnville over the next 5, 10, 20, and 46 years, including housing market changes, demographics, and other factors. The Housing Needs Analysis (HNA) provides a factual basis for an evaluation and revision to the Housing Element in McMinnville's Comprehensive Plan, to ensure that McMinnville meets the essential requirements of statewide planning Goal 10: to provide opportunities for development of housing that meets the needs of households of all income levels and to ensure the city has a 20-year supply of buildable residential land.

McMinnville is growing

The community welcomed nearly 7,431 new residents between 2000 and 2019.

This summary report presents the results of two longer reports:

- **McMinnville Housing Needs Analysis 2021 to 2041** presents the full results of the housing needs analysis (HNA) for McMinnville and is intended to comply with statewide planning Goal 10 (housing) and Oregon Administrative Rule (OAR) 660-008. In addition to the 20-year forecast period, the analysis looked at housing and land needs over a 5-, 10-, and 46-year planning horizon.
- **McMinnville Housing Policy and Actions** presents recommendations for a revision to McMinnville's Comprehensive Plan Housing Element and implementation actions intended to result in policy changes that provide opportunities for development of housing to meet McMinnville's identified housing needs.

As McMinnville grows, the City needs to take stock of how much land is available to accommodate new homes.

City and ECONorthwest staff worked with the Housing Needs Analysis Project Advisory Committee (HNAPAC) to review the results of the Housing Needs Analysis and develop the Housing Strategy. The PAC met seven times between July 2018 and June 2019. Other public outreach included an open house and a stakeholder focus group.

McMinnville's Population and Households

Population and housing characteristics are useful for better understanding McMinnville and McMinnville's residents. Population growth, age of residents, household size and composition, and tenure status (homeowners and renters) provide useful context about how the characteristics of McMinnville's households compare to Yamhill County and Oregon.

Unless otherwise noted, all data in this document are from the U.S. Census 2012-2016 or 2013-2017 American Community Survey.

McMinnville's population has historically grown faster than both the county and state.

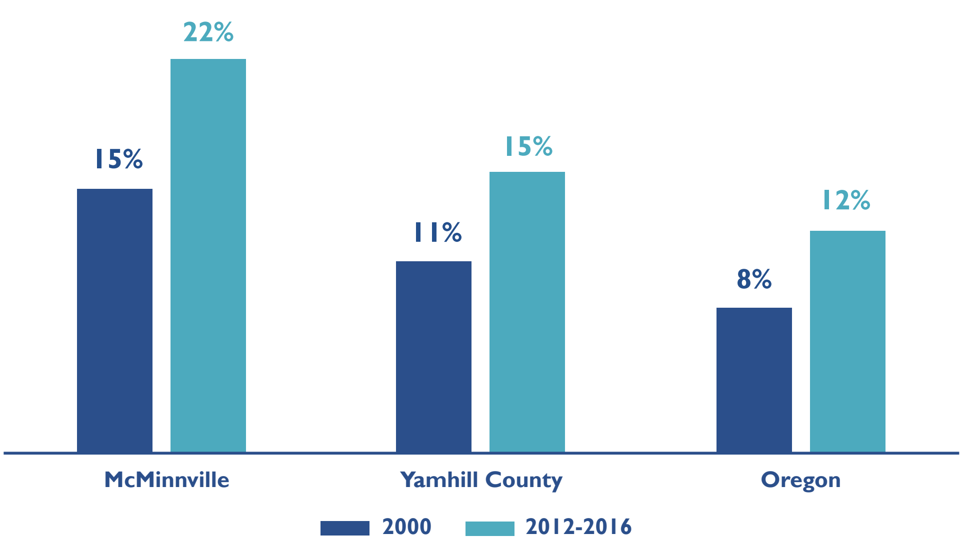
McMinnville's share of the population over 60 years of age is expected to increase over the next 20 years.

AVERAGE NUMBER OF PEOPLE PER HOUSEHOLD, 2017

PERCENT OF POPULATION THAT IS HISPANIC OR LATINO, 2000 & 2016



McMinnville is ethnically diverse.

McMinnville's population is more ethnically diverse than Yamhill County and Oregon's population.

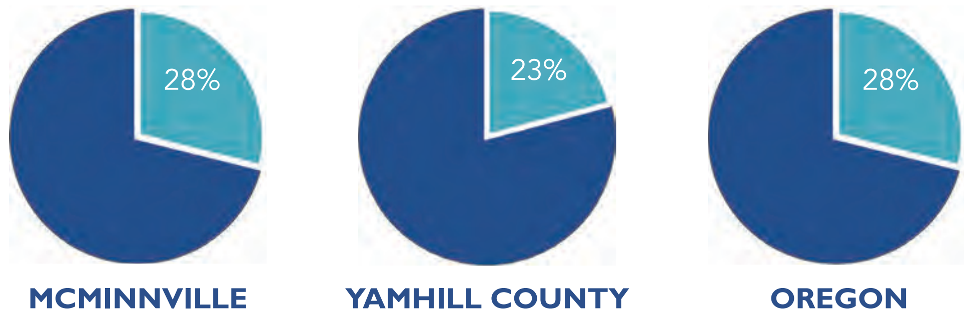
DRAFT

MCMINNVILLE'S POPULATION AND HOUSEHOLDS

McMinnville has an increasing number of one-person households.

From 2000 to 2017, McMinnville's share of one-person households grew from 24% of all households to 28%.

PERCENT OF 1-PERSON HOUSEHOLDS, 2017

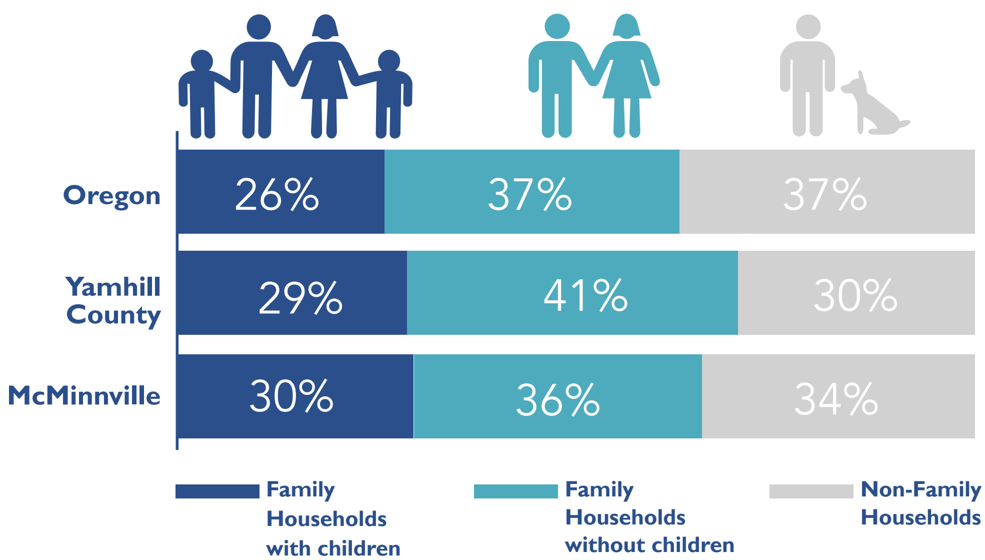


About a third of McMinnville's households were non-family.

McMinnville had a larger share of non-family households than Yamhill County and a smaller share of non-family households than Oregon.

HOUSEHOLD COMPOSITION, 2017

A family household is one in which the residents are related to at least one other person in the household by birth, marriage, or adoption. Non-family households include people living alone, unmarried couples, and unrelated housemates.



McMinnville's Housing Market

Analysis of historical development trends in McMinnville provides insights into how the local housing market functions in the context of Yamhill County. This report groups housing into the three housing types shown below.

SINGLE-FAMILY DETACHED
(includes manufactured homes)

SINGLE-FAMILY ATTACHED
(townhouses)

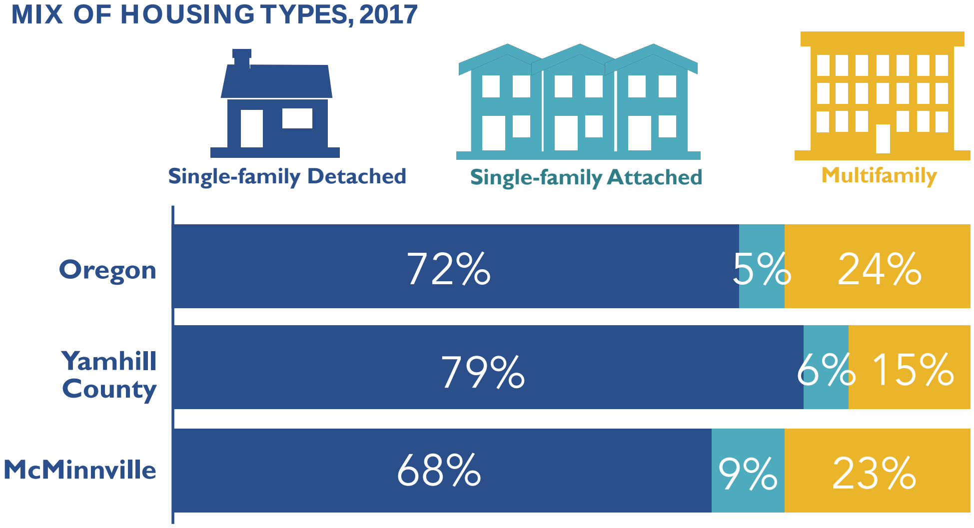
MULTIFAMILY
(duplexes, tri- and quad-plexes, buildings with 5+ units)

Since 2000, McMinnville mix of housing types has remained relatively unchanged, despite growth in total dwelling units. In McMinnville, government-assisted housing and housing for farmworkers can be any of the housing types listed above.

Most of McMinnville's housing stock, including housing built since 2000 was single-family detached housing.

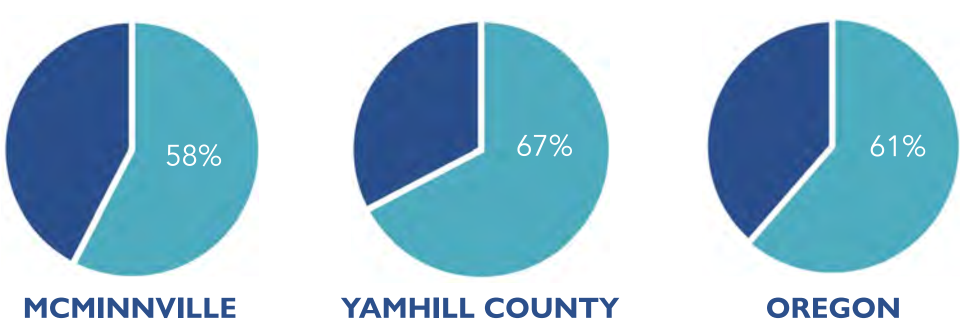
Limited housing diversity limits opportunities for rental housing and limits the variety of housing available for ownership.

MIX OF HOUSING TYPES, 2017



Urban areas, like McMinnville, will typically have a larger share of multifamily housing than more rural areas, such as unincorporated areas of Yamhill County.

PERCENT OF HOUSING UNITS THAT ARE OWNER-OCCUPIED, 2016



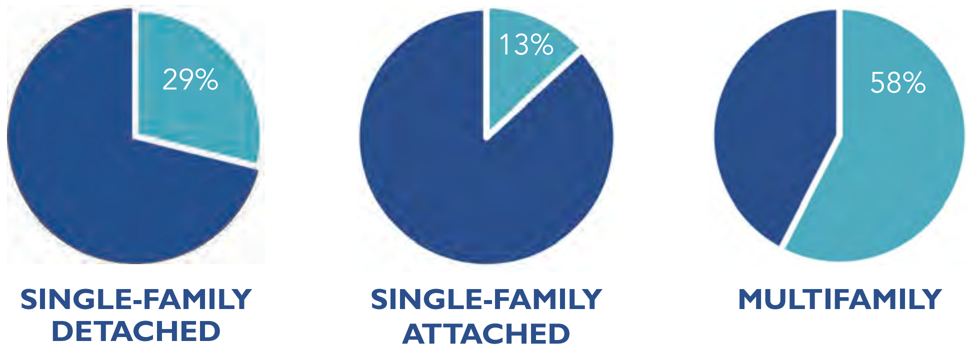
A majority of McMinnville's housing is owner-occupied. Most of McMinnville's homeowners (95%) live in single-family detached housing.

MCMINNVILLE'S HOUSING MARKET

A majority of renters in McMinnville live in multifamily housing.

McMinnville has a larger share of renters than both the county and state.

PERCENT OF MCMINNVILLE'S HOUSING UNITS THAT ARE RENTER-OCCUPIED BY TYPE OF HOUSING, 2016

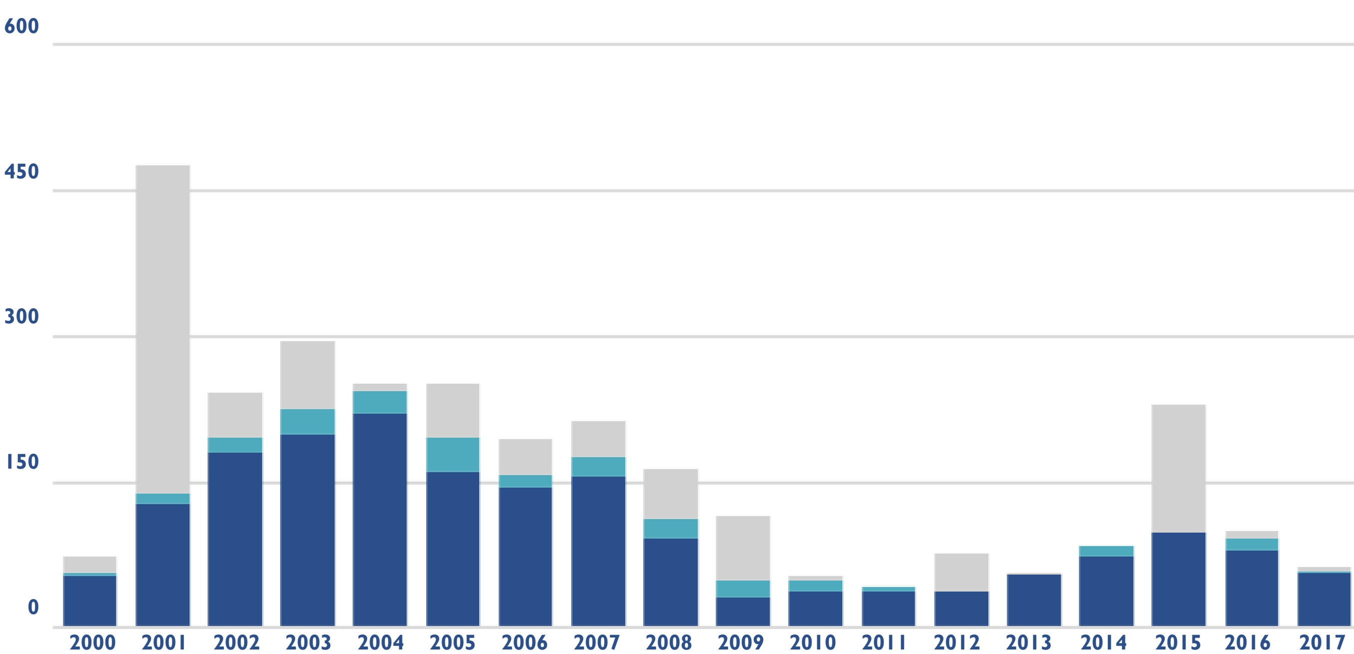


McMinnville issued about 3,000 permits for dwelling units between 2000 and 2017. Sixty-two percent of all permits issued were for single-family detached dwelling units, 8% were for single-family attached dwellings units, and 31% were for multifamily dwelling units.

The 2008 recession impacted McMinnville's housing market. McMinnville permitted about 1,300 fewer units between 2009-2017, compared to 2000-2008.

BUILDING PERMITS ISSUED, 2000 TO 2017

Source: McMinnville Building Permit Database

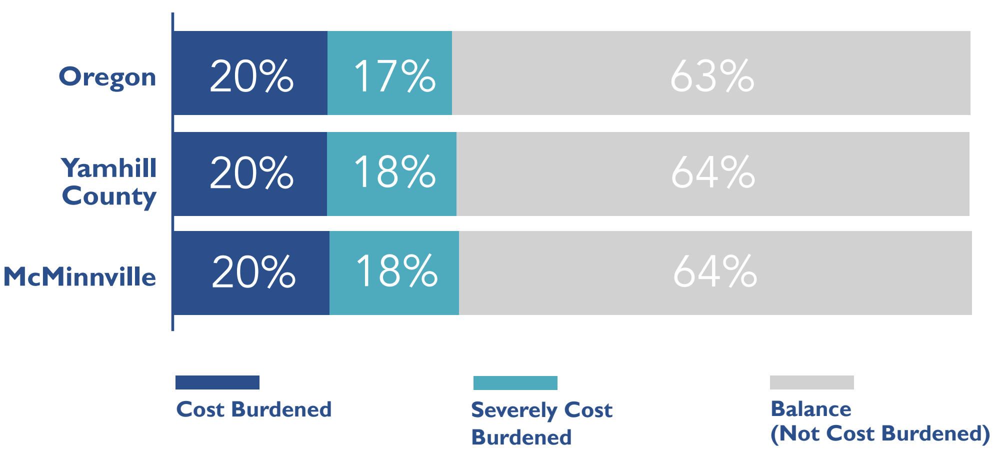


Housing Affordability

The term affordable housing refers to a household's ability to find housing within its financial means. Housing affordability affects both higher- and lower-income households and is an important issue for McMinnville and the region. Low-income households have fewer resources available to pay for housing and have the most difficulty finding affordable housing. Key points about affordability in McMinnville include:

- McMinnville will have an ongoing need for housing affordable to households across the income spectrum.
- The City is planning for housing types for households at all income levels.
- Future housing affordability will depend on the relationship between income and housing price. The key question, which is difficult to answer based on historical data, is whether housing prices will continue to outpace income growth. It seems likely that without public intervention, housing will become less affordable in McMinnville.

PERCENT OF HOUSEHOLDS THAT ARE COST BURDENED OR SEVERELY COST BURDENED, 2016



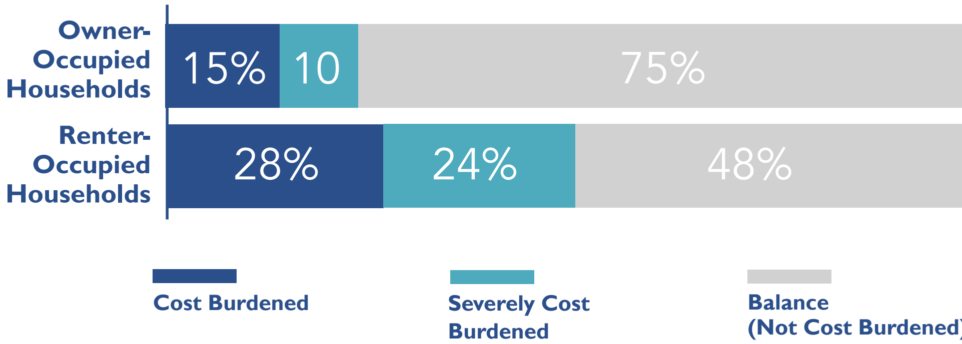
Cost-burdened households spend more than 30% of their gross income on housing.

HOUSING AFFORDABILITY

Consistent with the region, over a third of McMinnville's households are paying more than they can afford for housing.

Renters are much more likely to be cost burdened than homeowners in McMinnville.

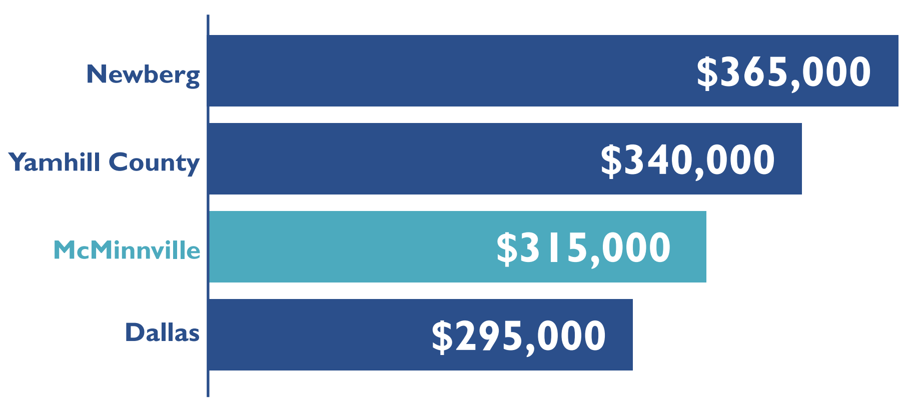
PERCENT OF MCMINNVILLE'S HOUSEHOLDS THAT ARE COST BURDENED OR SEVERELY COST BURDENED, BY OWNERSHIP STATUS, 2016



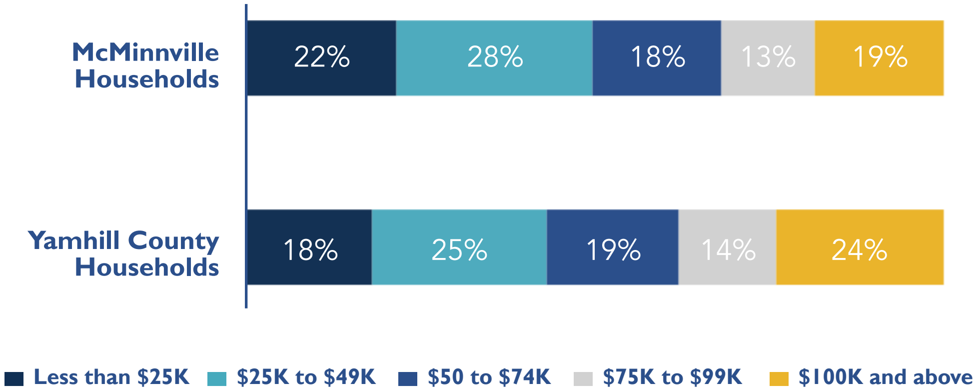
MEDIAN MONTHLY RENTS, 2016

MEDIAN HOME SALES PRICES, FEBRUARY 2019

Source: Redfin



HOUSEHOLD INCOME DISTRIBUTION, 2016



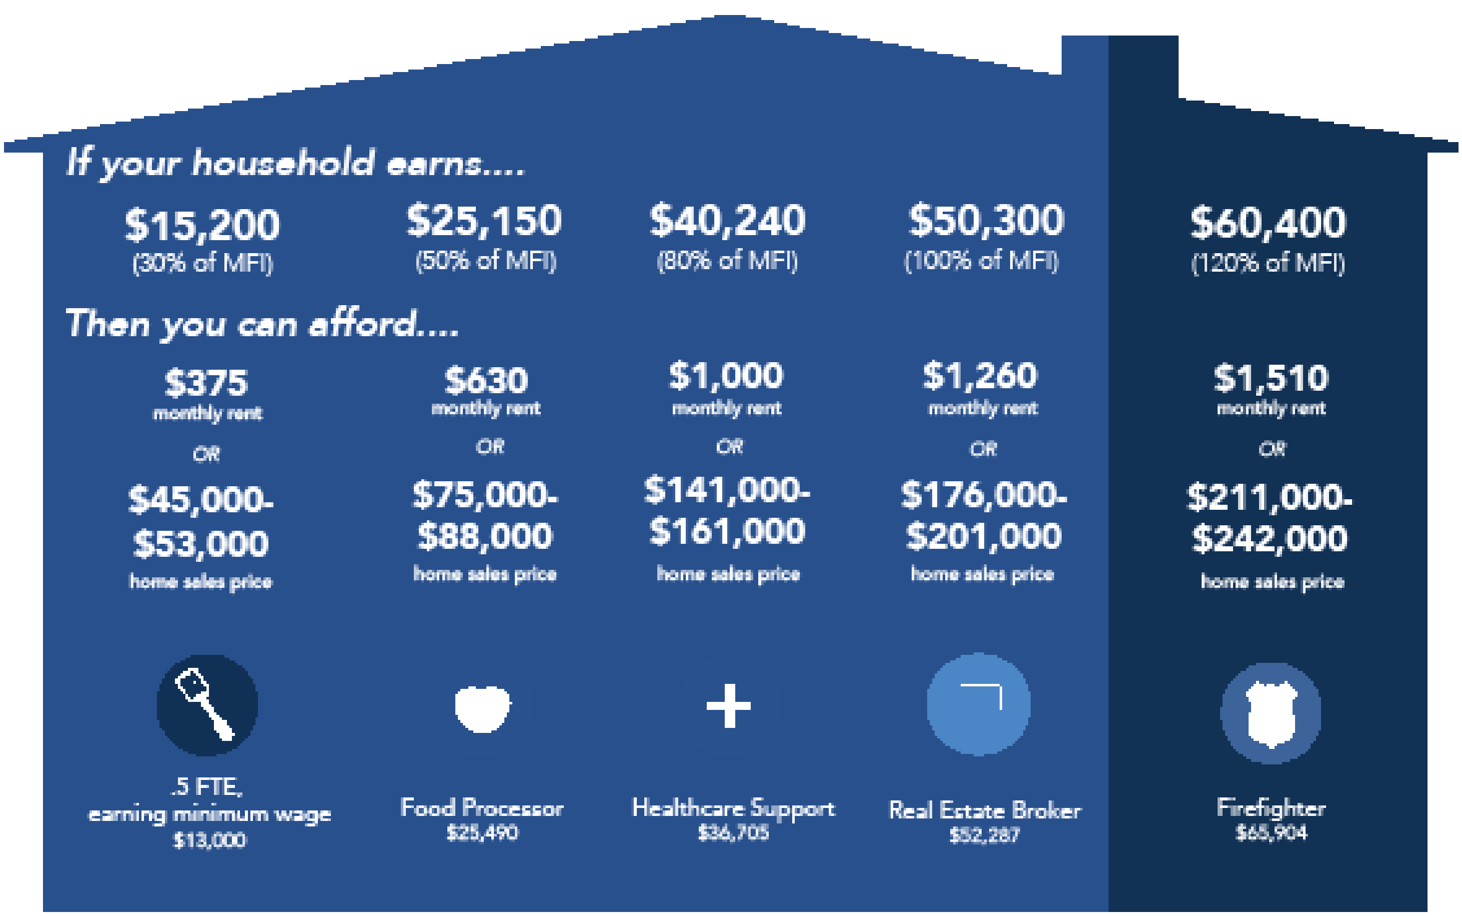
Households earning less than $25,000 per year are considered Very or Extremely Low-Income. Compared to Yamhill County, more households in McMinnville fall into this category.

Another way to evaluate housing affordability is to consider housing types affordable at different levels of income. The 2017 median household income in McMinnville was $50,300.

A household in McMinnville would need to earn about $90,000 per year to afford a house at the median home sales price of $315,000 in McMinnville. Fewer than 24% of McMinnville's existing households have the income to afford a house at this price.

FINANCIALLY ATTAINABLE HOUSING BY MEDIAN HOUSEHOLD INCOME, 2017

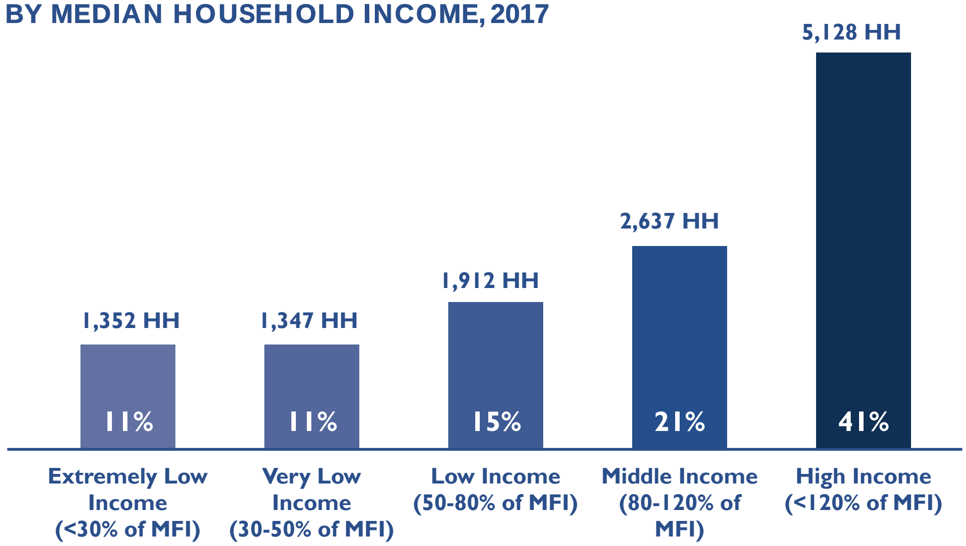
Source: Bureau of Labor Services



HOUSING AFFORDABILITY

About 41% of McMinnville's households are high income, earning $60,359 or more per year. About 37% of McMinnville's households earn 80% or less of MHI (about $40,200 per year) and cannot afford a two-bedroom unit at Yamhill County's fair market rent of $1,330.

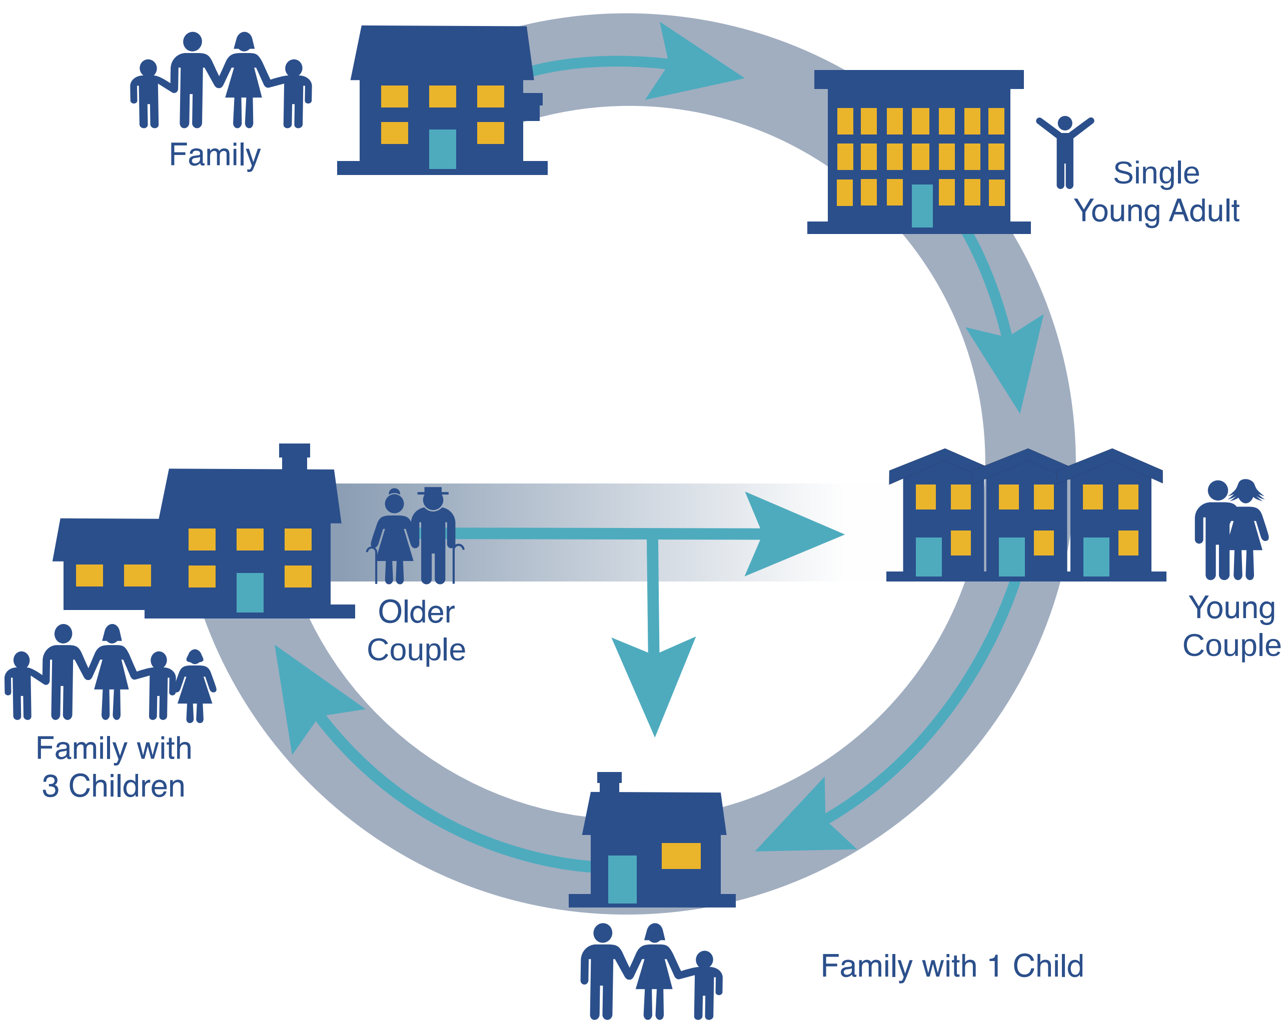
SHARE OF MCMINNVILLE'S HOUSEHOLDS BY MEDIAN HOUSEHOLD INCOME, 2017



Factors Affecting Housing Need

Studies and data analysis have shown a clear linkage between demographic characteristics and housing choice, as shown in the figure below. Key relationships include:

- Housing needs change over a person's lifetime.
- Homeownership rates increase as income increases.
- Homeownership rates increase as age increases.
- Choice of single-family detached housing increases as income increases.
- Renters are much more likely to choose multifamily housing than single- family housing.
- Income is a strong determinant of tenure and housing-type choice for all age categories.



DRAFT

FACTORS AFFECTING HOUSING NEED

The linkages between demographics and housing need can be used to predict future housing need in McMinnville. Three demographic trends are particularly important for McMinnville:

- **Aging of Baby Boomer Generation (born 1946 to 1964)**
- **Aging of the Millennial Generation (born early 1980s to early 2000s)**
- **Continued growth of the Latinx population**

Housing Implications for Boomers:

Need for smaller, lower- cost housing near transit and urban amenities such as shopping and health care services.

Aging of the Baby Boomers

Consistent with state and national trends, McMinnville's population is growing older. By 2040, 28% of the population of McMinnville is forecast to be 60 years of age and older, up from 22% in 2016.

LIKELY TRENDS AMONG BABY BOOMER HOUSEHOLDS:

Household Sizes
(more 1 person households)

Homeownership Rates
(especially 75 years old)

Income

Housing Implications for Millennials:

Need for affordable owner and renter housing, especially in walkable neighborhoods. Millennial incomes will increase as they age. They will need opportunities for affordable, owner-occupied single-family housing, such as cottages or townhouses.

Aging of the Millennials

The share of Millennials residing in McMinnville is forecast to stay consistent over the planning period. McMinnville's ability to attract and retain Millennials will depend on availability of affordable owner- and renter-occupied housing.

LIKELY TRENDS AMONG MILLENNIAL HOUSEHOLDS:

Household Sizes
(as they form families)

Homeownership Rates

Income

Housing Implications for Latinx Households:

Need for larger, lower-cost renting and ownership opportunities to accommodate larger households with more children and multiple generations.

Continued Growth of the Latinx Population

McMinnville's Latinx population grew by more than 3,400 people (7%) between 2000 and 2016. Nationwide, the Latinx population is predicted to be the fastest growing ethnic group over the next few decades.

CHARACTERISTICS OF LATINX HOUSEHOLDS COMPARED TO NON-LATINX HOUSEHOLDS:

Household Sizes

Homeownership Rates
(Hispanics/Latino households have higher homeownership rates at younger ages)

Continued Lower-Than-Avg. Income

Development Capacity

The capacity analysis estimates the number of new dwelling units that can be accommodated on McMinnville's buildable vacant and partially vacant residential land based on historical densities, with deductions for future rights-of-way.

Capacity on Buildable Residential Land

CAPACITY ON RESIDENTIAL LAND, BY ZONING DISTRICT

2,129 total dwelling units 1 square represents 29 dwelling units

1,038 dwelling units

O-R Office / Residential	C-3 General Commercial	County Zoning

Definitions

Capacity:

Number of dwelling units that can be accommodated on buildable land at planned densities.

Housing Density:

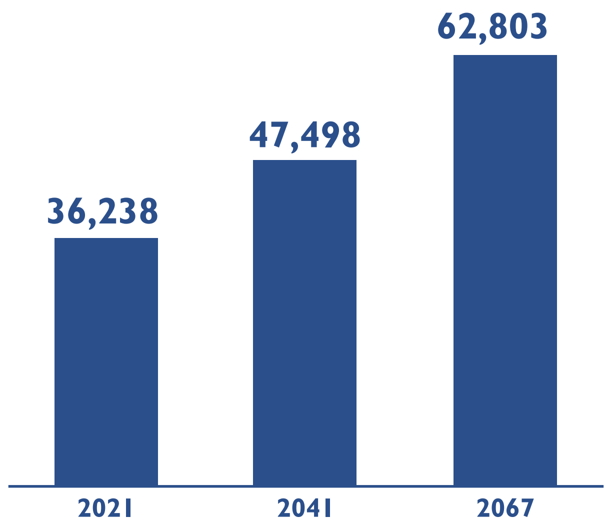
Number of dwelling units in an acre of land, with 43,560 square feet to 1 acre.

McMinnville's population is forecast to grow at 1.4% per year, adding over 11,200 new residents between 2021-2041. McMinnville will add another 15,300 new residents between 2041-2067.

Demand For Residential Land, By Housing Type

McMinnville's population growth will affect the number of new households created and the demand for residential land. McMinnville's forecast for new housing is based on the forecast for population growth within the McMinnville UGB.

FORECASTED TOTAL POPULATION, MCMINNVILLE UGB



Population Increase 11,260 (2021-2041) and 15,305 (2041-2067)

McMinnville's population growth will result in the addition of 4,657 new dwelling units between 2021-2041.

To accommodate growth between 2041-2067, McMinnville will add another 6,329 new dwelling units, for a total of 10,986 new units between 2021-2067. Some of these units will be accommodated through redevelopment or by accessory dwelling units and will not require buildable lands.

McMinnville will need to accommodate growth for 4,657 new dwelling units over the 20-year period, or 10,986 over the 46-year period. The analysis of housing affordability, the factors affecting housing need, and demographic changes suggest that McMinnville needs more affordable housing types (e.g., lower cost) and a greater variety of housing types, including more small-scale single-family detached housing, townhouses, and multifamily housing.

McMinnville needs to plan for a wider variety of housing types than has been produced in the past. These include different types of single-family detached units (e.g. tiny homes, cottages, small-lot single-family, traditional and high amenity), more townhouses, and more types of multifamily housing (e.g. duplexes, triplexes, quadplexes, apartments and condos with 5+ units).

	SINGLE-FAMILY DETACHED	SINGLE-FAMILY ATTACHED	MULTIFAMILY
2021-2041	2,561 new dwelling units	559 new dwelling units	1,537 new dwelling units
2021-2067	6,042 new dwelling units	1,318 new dwelling units	3,626 new dwelling units

Comparison of Housing Capacity to Housing Demand

The last step in the Housing Needs Analysis is to compare the capacity of McMinnville's vacant and partially vacant residential land with demand for housing. McMinnville does not have enough land in its residential plan designations to accommodate growth of single-family detached, single-family attached (townhouses), or multifamily housing.

Deficit of Capacity for New Housing

At historic housing densities, McMinnville has capacity for 2,129 dwelling units on existing vacant and partially vacant lands. McMinnville's planning period begins in 2021 and it is forecast that about 563 dwelling units will be developed in McMinnville before the planning period begins. This results in a refined housing capacity estimate of 1,566 dwelling units in McMinnville in 2021.

DEFICIT OF LAND FOR NEW HOUSING, MCMINNVILLE UGB, 2041

A deficit of -3,053 dwelling units results in a deficit of:

623 GROSS ACRES
at historic densities
(4.9 units per gross acre)

— OR —

-3,053

576 GROSS ACRES
at needed densities
(5.3 units per gross acre)

DEFICIT OF LAND FOR NEW HOUSING, MCMINNVILLE UGB, 2067

A deficit of -7,749 dwelling units results in a deficit of:

1,581 GROSS ACRES
at historic densities
(4.9 units per gross acre)

— OR —

-7,749

1,462 GROSS ACRES
at needed densities
(5.3 units per gross acre)

Key Findings and Conclusions

McMinnville's UGB is forecast to grow from 36,238 people in 2021 to 47,498 people in 2041, an increase of 11,260 people. After considering a number of factors, including household size and residential vacancy rates, McMinnville will have demand for about 4,657 new dwelling units over the 20-year planning period (2021 to 2041), and about 10,986 new dwelling units for the 46-year period between 2021 and 2067.

McMinnville will need to accommodate an average of 233 new dwelling units annually over the 20-year planning horizon. From 2018-2041, McMinnville will need to accommodate 5,269 new dwelling units. McMinnville will accommodate 87 needed dwelling units through redevelopment and infill — these units will not require vacant or partially vacant lands. Accordingly, this will result in McMinnville needing to accommodate 5,182 needed new dwelling units on vacant or partially vacant buildable residential lands.

In the future, McMinnville will plan for an increased share of single-family attached dwelling units and multifamily units to meet the City's housing needs. Currently, about 68% of McMinnville's housing stock is single-family detached housing, 9% is single-family attached housing, and 23% is multifamily housing. Based on Project Advisory Committee recommendations, McMinnville will plan for a different mix in new housing, which will result in a slight change to McMinnville's aggregate overall mix of existing and new housing. McMinnville will plan for a decrease in share of single-family detached housing (55% of new housing stock) to provide opportunities for more single-family attached housing (12% of new housing) and multifamily housing (33% of new housing).

McMinnville is planning for slightly higher overall average density than it has in the past. As McMinnville shifts toward more single-family attached housing and multifamily housing, McMinnville's average housing density (for new dwelling units) will increase from 4.9 dwelling units per gross acre (historic average density) to 5.3 dwelling units per gross acre (needed average density) — an 8% increase.

McMinnville's existing deficit of relatively affordable housing on both sides of the affordability spectrum indicates a need for a wider range of housing types for renters and homeowners. About 36% of McMinnville's households are cost burdened (paying more than 30% of their income on housing), including a cost-burden rate of 52% for renter households. Without diversification of housing types, lack of affordability will continue to be a problem — possibly growing in the future if incomes continue to grow at a slower rate than housing costs. Under the current conditions between 2021 and 2041, about:

- **1,016 of the forecasted new households will have incomes of $25,150 or less.** These households often cannot afford market-rate housing without government subsidy.
- **1,711 new households will have incomes between $25,150 and $60,359.** These households will need access to relatively affordable housing, such as single-family detached housing (e.g., tiny homes, cottages, small-lot, and traditional), single-family attached housing (e.g., town homes), and multifamily products (particularly middle housing types such as duplexes, triplexes, quadplexes, and apartments/multifamily condominiums).
- **1,930 new households will have incomes over $60,359.** These households will need higher-amenity housing types such as single-family detached housing, single-family attached housing, and higher-end multifamily products (particularly condominiums).

McMinnville's UGB will not accommodate all of McMinnville's housing needs. Over the planning period through 2041, McMinnville has a deficit of capacity for 3,053 dwelling units, which means the City has an approximate deficit of about 576 gross acres by 2041 based on acheiving the "needed density" of 5.3 du/acre. At the historic density of 4.9 du/acre this deficit would be 623 acres.

The McMinnville Housing Strategy presents a full range of policy and action recommendations from the housing needs analysis. This section summarizes the recommendations from that memorandum.

The overall intention of these policy actions is to ensure that McMinnville is allowing for development of a wide range of housing types that will be affordable to households at all income levels, consistent with the intention of Oregon's Statewide Planning Goal 10. No single policy is sufficient to create an environment where more diverse housing and will be developed in McMinnville.

Land Use Strategy

Strategy 1. Growth Planning

1.1 Develop an Urban Reserve Area
1.2 Establish a Framework Plan for the URA
1.3 Identify an Expanded UGB per the URA
1.4 Develop Area Plans for UGB Lands Identifying Housing Opportunities
1.5 Conduct Infrastructure Planning for URA and UGB Areas (Update infrastructure plans for growth lands)
1.6 Update Goal 5 Natural Resource Planning & Policies, incl. Wetlands and Riparian Areas
1.7 Update Goal 7 Hazards Planning & Policies, incl. Landslide Susceptibility
1.8 Review and Update City/County Urban Growth Management Agreement (UGMA) if needed.
1.9 Implement Great Neighborhood Principles
1.10 Create a Diverse Housing Zone
1.11 Develop a High-Density Residential Zone
1.12 Develop Annexation Process to Mandate Housing Types Upon Annexation per Area Plans

Strategy 2. Housing Development in Existing UGB

2.1 Create a Diverse Housing Zone
2.2 Develop a High-Density Residential Zone
2.3 Provide Density Bonuses to Developers
2.4 Promote Infill Development, Allowing Flexibility in Existing Zones with Appropriate Design and Development Standards
2.5 Update Infrastructure Plans for Infill Development
2.6 Implement Great Neighborhood Principles
2.7 Re-designate or Rezone Land for Housing

Strategy 3. Infrastructure & Public Facilities Planning

3.1 Assess Infrastructure Capacity to Support Infill
3.2 Repeal Outdated Policies Related to Old Sewer Treatment Capacity Limits
3.3 Identity Issues and Plan for Water Zone 2 Infrastructure Improvements
3.4 Develop Infrastructure Allocation Policies
3.5 Identify Areas with Underutilized Infrastructure Capacity
3.6 Encourage "To and Through" Infrastructure Policies

Strategy 4. Special Area Planning

4.1 City Center Housing Strategy
4.2 Evaluate Three Mile Lane for Residential Development
4.3 Undertake a Highway 99W Corridor Study – Explore Opportunities for Higher Density Mixed-Use Development

Strategy 5. Land Use / Code Amendments

5.1 Allow Duplexes, Cottages, Townhomes, Row Houses, and Tri- and Quad-Plexes in Single-Family Zones with Appropriate Design & Development Standards
5.2 Implement Other Code Amendments Prioritized by the PAC.
5.3 Streamline Zoning Code and Other Ordinances
5.4 Implement the Great Neighborhood Principles
5.5 Repeal Outdated Policies Related to Old Sewer Treatment Capacity Limits
5.6 Evaluate Code for Fair Housing Act Best Practices
5.7 Advocate for Inclusionary Zoning Enablement – State Legislation and Annexation Processes

Other, Non-Land Use Strategies

Strategy 6. Programs for Affordable Housing (Non-Land Use)

6.1 Pursue Funds for Affordable Housing (City Influence).
6.2 Financial Incentives Supporting Inclusionary Zoning
6.3 Reduced or Waived Planning Fees, Permit Fees, SDCs for Affordable Housing
6.4 Vertical Housing Tax Abatement (Locally Enabled & Managed)
6.5 SDC Financing and Credits
6.6 Parcel assembly
6.7 Multiple-Unit Limited Tax Exemption Program (Locally Enabled and Managed)
6.8 Sole Source SDCs
6.9 Grants or Loans
6.10 Vacant Property Tax.
6.11 Fee for Demolition of Affordable Home for Expensive Home.

Strategy 7. Leveraging Partnerships for Housing (Non-Land Use)

7.1 Support Partners Pursuit of Affordable Housing Funds
7.2 Community Land Trust (CLT)
7.3 Affordable Housing Property Tax Abatement
7.4 Land Banking

ECONOMIC OPPORTUNITIES ANALYSIS

McMinnville's Economic Opportunities Analysis (EOA) provides information to support economic development planning and management of McMinnville's commercial and industrial land. The City last evaluated economic trends in an EOA in 2013. Substantial changes have occurred in the national and regional economy since 2013 that have implications for economic growth in McMinnville, including the recovery from the Great Recession and changes in retail and increased automation. In 2019, the City adopted the MAC-Town 2032 Economic Development Strategic Plan which identifies target industries and establishes a detailed action plan to enhance McMinnville's economy.

This report summarizes detailed technical analysis found in the 2020 McMinnville Economic Opportunities Analysis. The purpose of the 2020 EOA was to develop a factual base to provide the City with information about current economic conditions. This factual basis, presented in the EOA, provides information necessary for updating the City's economic development Comprehensive Plan policies and to evaluate whether McMinnville has an adequate inventory of industrial and other employment sites to accommodate economic and employment growth.

The EOA provides information that the City can use to identify and capitalize on its economic opportunities. It also provides information essential to addressing the City's challenges in managing economic development. These challenges include a lack of appropriate industrial sites to support growth of businesses that require specific characteristics, as well as a significant deficit of land for retail, office, and other commercial uses.

This summary report presents the results of the McMinnville Economic Opportunities Analysis 2021 to 2041, which presents the full results of the EOA for McMinnville and is intended to comply with statewide planning Goal 9 (economy) and Oregon Administrative Rule (OAR) 660-009. The EOA presents an evaluation of McMinnville Comprehensive Plan policies related to economic development.

City staff and ECONorthwest staff worked with the Project Advisory Committee (PAC) to review the results of the EOA.

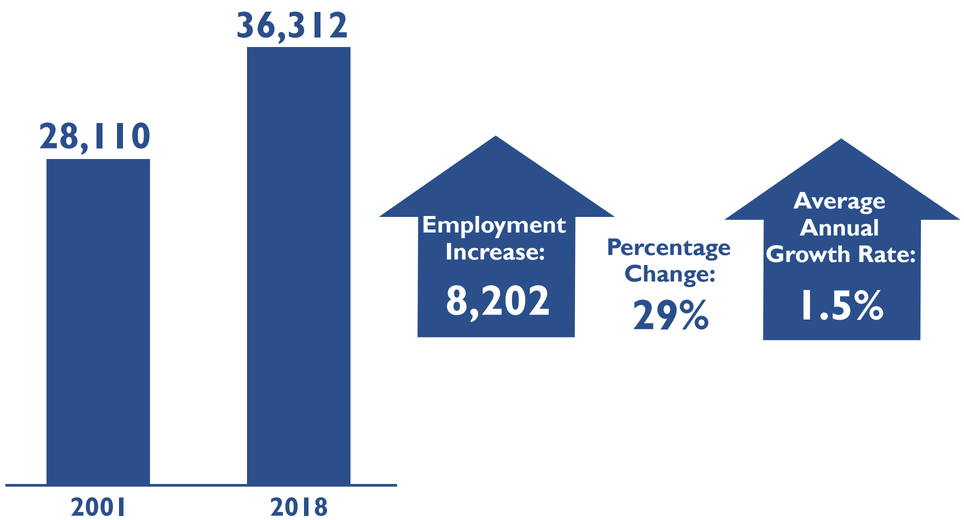
DRAFT

FACTORS AFFECTING ECONOMIC GROWTH IN MCMINNVILLE

McMinnville's economy and employment will grow as a result of growth in the national and regional economy, as well as factors in Yamhill County and the Willamette Valley. The following are key trends that have implications for economic growth in McMinnville.

CHANGE IN COVERED EMPLOYMENT, YAMHILL COUNTY, 2001-2018

Source: U.S. Bureau of Labor Statistics.

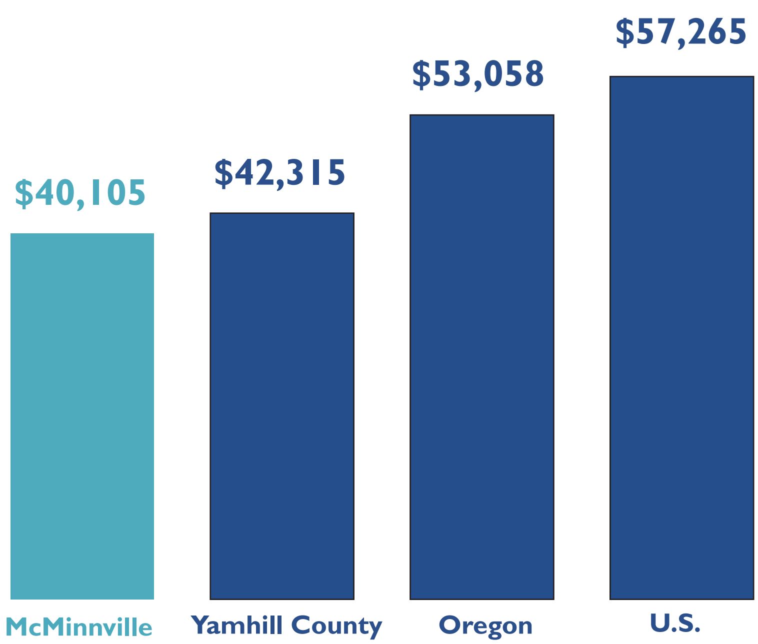


Industrial employment, including sectors such as manufacturing, grew in Yamhill County between 2001 and 2018

Industrial sectors added more than 2,500 jobs, commercial services added almost 5,000 jobs, and retail employment increased by over 570 jobs.

AVERAGE ANNUAL PAY

Oregon Employment Department: Oregon Labor Market Information System, U.S. Bureau of Labor Statistics

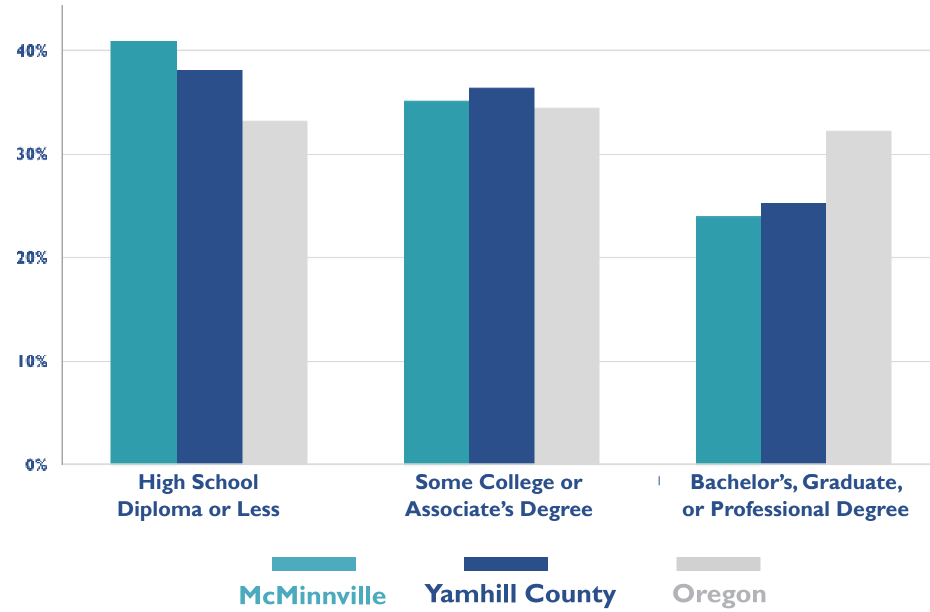


The average pay for jobs in McMinnville was $40,105 per job, below the County and State averages.

FACTORS AFFECTING ECONOMIC GROWTH IN MCMINNVILLE

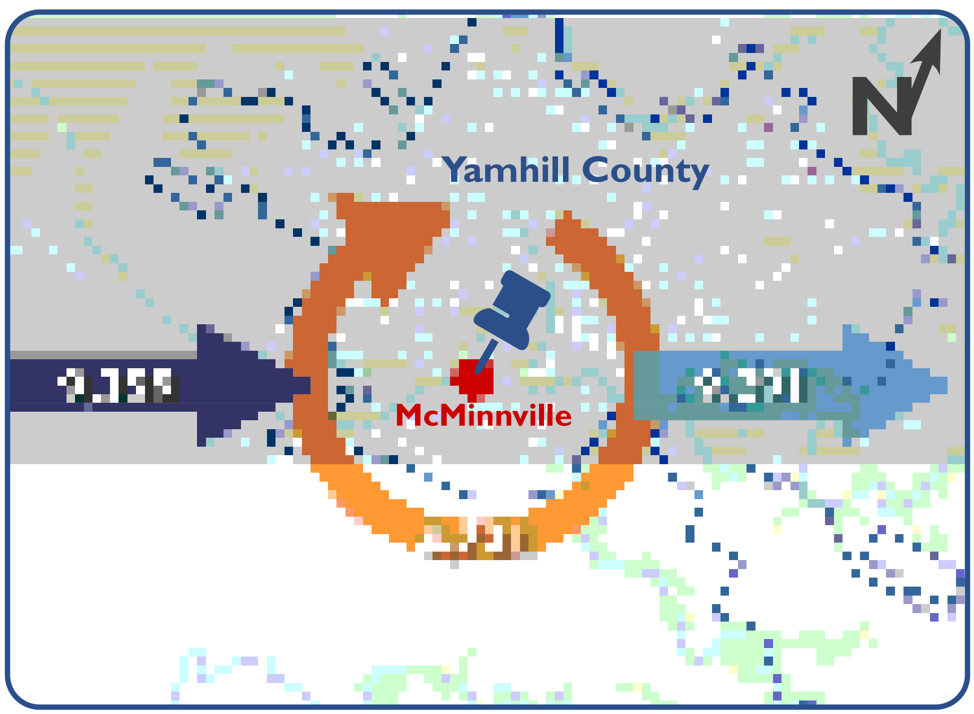
McMinnville has a lower than average percent of population with a Bachelor's Degree (or higher) relative to statewide trends.

EDUCATIONAL ATTAINMENT, PERCENT OF THE POPULATION AGE 25 AND OVER, 2017



McMinnville is part of the regional economy of the Mid-Willamette Valley. About 38% of people who work in McMinnville also reside in McMinnville, while other workers commute to McMinnville from other places including Salem, Portland, and Newberg.

COMMUTING PATTERNS IN MCMINNVILLE, 2017



5,721	9,359	9,291
People live and work in McMinnville	People commute into McMinnville to work	People live in McMinnville and work elsewhere

Employment in McMinnville

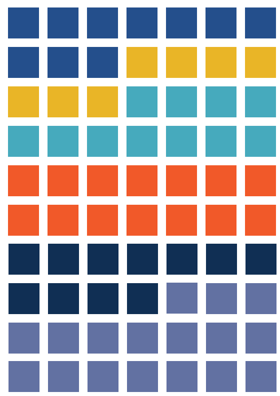
In 2017, McMinnville had about 14,964 covered employees[1] at 1,208 businesses and other employers. McMinnville's average employer size was 12.4 employees per employer. The sectors with the largest concentrations of employees in McMinnville were in the following sectors: Health Care and Social Assistance / Private Education (21%), Manufacturing (15%), Retail Trade (15%), Government (14%), and Accommodation and Food Service (10%).

JOBS BY SECTOR, MCMINNVILLE, 2017

Source: Oregon Employment Department, Quarterly Census of Employment and Wages

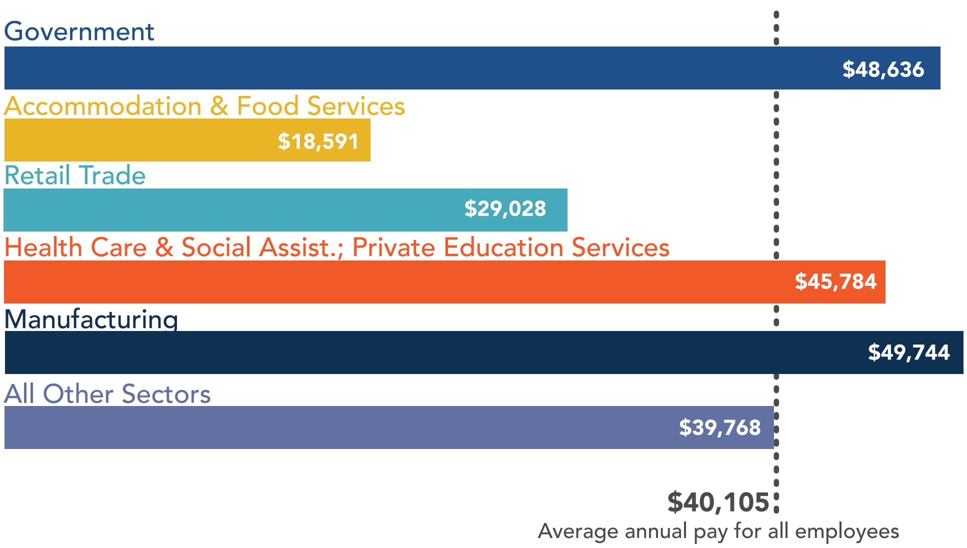
1square represents 500 jobs

Government:	2,082 employees / **14%**
Accommodation & Food Services:	1,503 employees / **10%**
Retail Trade:	2,170 employees / **15%**
Health Care & Social Assist.; Private Education Services:	3,159 employees / **21%**
Manufacturing:	2,277 employees / **15%**
All Other Sectors:	3,773 employees / **25%**



Food and Beverage manufacturing accounts for about one quarter of McMinnville's employment in the manufacturing sector.

AVERAGE PAY BY SECTOR, MCMINNVILLE, 2017



McMinnville's employment in Healthcare, Social Assistance, and Private Education has the largest share of employment and higher-than-average wages.

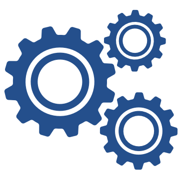
[1] Covered employment is employment covered by unemployment insurance. Covered employment does not include all workers in an economy. Most notably, covered employment does not include sole proprietors.

DRAFT

MCMINNVILLE'S COMPETITIVE ADVANTAGES AND TARGET INDUSTRIES

Target Industries

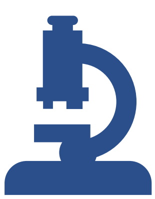
The industries identified as having potential for growth in McMinnville (according to the MAC-Town 2032 Economic Development Strategic Plan) **are:**



Traditional Industry & Advanced Manufacturing

Craft Beverages & Food Systems

Technology & Entrepreneurship



Education, Medicine & Other Sciences

Economic development opportunities in McMinnville will be affected by local conditions as well as the national and state economic conditions addressed above. Economic conditions in McMinnville relative to these conditions in other portions of the Mid-Willamette Valley region form McMinnville's competitive advantage for economic development. McMinnville's competitive advantages have implications for the types of firms most likely to locate and expand in the area.

- **Location and size.** McMinnville is located with proximity to Portland, Salem, and the Oregon Coast. McMinnville's central location serves the local community, regional employment, and commercial service needs, as well as serving tourism industries as a regionally recognized destination for Yamhill and Willamette Valley wineries.
- **Transportation.** McMinnville is directly served by Highway 99W – as a historically significant central organizing spine to access commercial and industrial businesses throughout the community. Highway 18 and Highway 22 (via 99W) also provide connections to the region. The McMinnville Municipal Airport has the capacity to handle corporate jet aircraft – together with availability of aircraft rentals, flight instruction, aircraft maintenance, and fuel.
- **Low public utility rates.** McMinnville is recognized as offering low electricity and water rates compared with other public and private utilities region-wide and statewide.
- **Access to labor pool and workforce training resources.** McMinnville employers have access to a county-wide labor market of nearly 50,000, as well as the larger regional Mid-Valley labor pool. McMinnville's access to education through Linfield College and Chemeketa Community College also provide direct connections for businesses and potential employees.
- **Quality of life.** McMinnville's small-town character, including a walkable downtown attracts workers and businesses to McMinnville, and is especially attractive for entrepreneurial and other individually owned, non-corporate enterprises.

McMinnville's disadvantages for economic development include:

- **Transportation.** McMinnville's poor linkages to Interstate access and congestion on the 99W corridor present challenges to Transportation in McMinnville.
- **Land supply.** Since 2000, population has been increasing somewhat more rapidly than the state, at an average annual rate of 1.4%. In the past, City services have been able to match without experiencing major fiscal issues. However, continued population growth at a somewhat reduced coordinated population growth rate averaging about 1.2% per year is now forecast through 2067. Constrained land supply may be restricting growth and the cost of services is increasing faster than increases in assessed values. The EOA shows a deficit of commercial land in McMinnville.

FORECAST OF EMPLOYMENT GROWTH AND LAND SUFFICIENCY

The rate at which McMinnville's employment base grows over the next 20 years will affect development of new commercial and industrial buildings and demand for employment land. McMinnville's employment forecast assumes that employment will grow at the same rate as population growth, at 1.36% average annual per year. Employment growth will result in growth of more than 6,800 new jobs and demand for 741 acres of land between 2021 and 2041, and demand for 954 acres of land between 2021 and 2067.

McMinnville's employment is forecast to grow at the same rate as its population, 1.36% per year.

FORECASTED DEMAND FOR LAND TO ACCOMMODATE EMPLOYMENT, 2021-2041

741 total acres

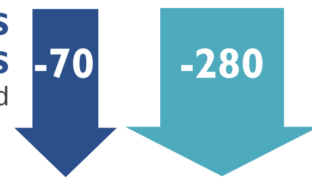
1 square represents 25 acres

384 acres, Industrial **357 acres,** Commercial

DEFICIT OF LAND FOR EMPLOYMENT LAND, MCMINNVILLE UGB, 2041

McMinnville does not have enough land to accommodate commercial and industrial employment growth over the next 20 years. The City has a deficit of about 70 acres of industrial land and about 280 acres of commercial land.

70 GROSS ACRES of industrial land

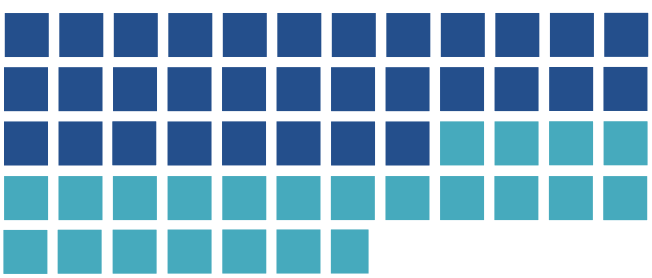


280 GROSS ACRES of commercial land

FORECASTED DEMAND FOR LAND TO ACCOMMODATE EMPLOYMENT, 2021-2067

954 total acres

1 square represents 25 acres

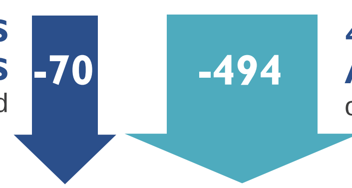


384 acres, Industrial **570 acres,** Commercial

DEFICIT OF LAND FOR EMPLOYMENT LAND, MCMINNVILLE UGB, 2067

McMinnville does not have enough land to accommodate commercial and industrial employment growth over the next 46 years. The City has a deficit of about 70 acres of industrial land and about 494 acres of commercial land.

70 GROSS ACRES of industrial land



494 GROSS ACRES of commercial land

PUBLIC AND INSTITUTIONAL USES INCLUDE:

- Public Schools
- Private Schools
- Religious Uses
- Parks
- Government
- Semi-Public Services
- Infrastructure

Public and Institutional Land Needs

Certain land uses don't lend themselves to forecasting land needs by use of an employment forecast and employment density assumptions. Statewide Planning Goal 14 (Urbanization) explicitly discusses specific public lands under Land Need Factor 2 (emphasis added): "Demonstrated need for housing, employment opportunities, livability or uses such as **public facilities, streets and roads, schools, parks or open space**, or any combination of the need categories…". The HNA and EOA identify land supply and demand for housing and employment. Cities, however, provide land for other uses that support housing and employment as well as other aspects of community life.

Inventorying public and institutional land needs was the first step in the analysis. The inventory was then converted into the number of acres per 1,000 population. Public and institutional land needs were further informed through consultations with affected city departments, the McMinnville School District, Chemeketa Community College, and Linfield College, and government agencies. The results were discussed at several meetings of a subcommittee of the EOA PAC and reflect the PAC's recommendations.

CHAPTER ....

AN ACT

Relating to housing; creating new provisions; amending ORS 197.296, 197.303, 197.312 and 455.610 and section 1, chapter 47, Oregon Laws 2018; and declaring an emergency.

Be It Enacted by the People of the State of Oregon:

SECTION 1. Section 2 of this 2019 Act is added to and made a part of ORS chapter 197.

SECTION 2. (1) As used in this section:

(a) "Cottage clusters" means groupings of no fewer than four detached housing units per acre with a footprint of less than 900 square feet each and that include a common courtyard.

(b) "Middle housing" means:

(A) Duplexes;

(B) Triplexes;

(C) Quadplexes;

(D) Cottage clusters; and

(E) Townhouses.

(c) "Townhouses" means a dwelling unit constructed in a row of two or more attached units, where each dwelling unit is located on an individual lot or parcel and shares at least one common wall with an adjacent unit.

(2) Except as provided in subsection (4) of this section, each city with a population of 25,000 or more and each county or city within a metropolitan service district shall allow the development of:

(a) All middle housing types in areas zoned for residential use that allow for the development of detached single-family dwellings; and

(b) A duplex on each lot or parcel zoned for residential use that allows for the development of detached single-family dwellings.

(3) Except as provided in subsection (4) of this section, each city not within a metropolitan service district with a population of more than 10,000 and less than 25,000 shall allow the development of a duplex on each lot or parcel zoned for residential use that allows for the development of detached single-family dwellings. Nothing in this subsection prohibits a local government from allowing middle housing types in addition to duplexes.

(4) This section does not apply to:

(a) Cities with a population of 1,000 or fewer;

(b) Lands not within an urban growth boundary;

(c) Lands that are not incorporated and also lack sufficient urban services, as defined in ORS 195.065;

(d) Lands that are not zoned for residential use, including lands zoned primarily for commercial, industrial, agricultural or public uses; or

(e) Lands that are not incorporated and are zoned under an interim zoning designation that maintains the land's potential for planned urban development.

(5) Local governments may regulate siting and design of middle housing required to be permitted under this section, provided that the regulations do not, individually or cumulatively, discourage the development of all middle housing types permitted in the area through unreasonable costs or delay. Local governments may regulate middle housing to comply with protective measures adopted pursuant to statewide land use planning goals.

(6) This section does not prohibit local governments from permitting:

(a) Single-family dwellings in areas zoned to allow for single-family dwellings; or

(b) Middle housing in areas not required under this section.

SECTION 3. (1) Notwithstanding ORS 197.646, a local government shall adopt land use regulations or amend its comprehensive plan to implement section 2 of this 2019 Act no later than:

(a) June 30, 2021, for each city subject to section 2 (3) of this 2019 Act; or

(b) June 30, 2022, for each local government subject to section 2 (2) of this 2019 Act.

(2) The Land Conservation and Development Commission, with the assistance of the Building Codes Division of the Department of Consumer and Business Services, shall develop a model middle housing ordinance no later than December 31, 2020.

(3) A local government that has not acted within the time provided under subsection (1) of this section shall directly apply the model ordinance developed by the commission under subsection (2) of this section under ORS 197.646 (3) until the local government acts as described in subsection (1) of this section.

(4) In adopting regulations or amending a comprehensive plan under this section, a local government shall consider ways to increase the affordability of middle housing by considering ordinances and policies that include but are not limited to:

(a) Waiving or deferring system development charges;

(b) Adopting or amending criteria for property tax exemptions under ORS 307.515 to 307.523, 307.540 to 307.548 or 307.651 to 307.687 or property tax freezes under ORS 308.450 to 308.481; and

(c) Assessing a construction tax under ORS 320.192 and 320.195.

(5) When a local government makes a legislative decision to amend its comprehensive plan or land use regulations to allow middle housing in areas zoned for residential use that allow for detached single-family dwellings, the local government is not required to consider whether the amendments significantly affect an existing or planned transportation facility.

SECTION 4. (1) Notwithstanding section 3 (1) or (3) of this 2019 Act, the Department of Land Conservation and Development may grant to a local government that is subject to section 2 of this 2019 Act an extension of the time allowed to adopt land use regulations or amend its comprehensive plan under section 3 of this 2019 Act.

(2) An extension under this section may be applied only to specific areas where the local government has identified water, sewer, storm drainage or transportation services that are either significantly deficient or are expected to be significantly deficient before December 31, 2023, and for which the local government has established a plan of actions that will remedy the deficiency in those services that is approved by the department. The extension may not extend beyond the date that the local government intends to correct the deficiency under the plan.

(3) In areas where the extension under this section does not apply, the local government shall apply its own land use regulations consistent with section 3 (1) of this 2019 Act or the model ordinance developed under section 3 (2) of this 2019 Act.

(4) A request for an extension by a local government must be filed with the department no later than:

(a) December 31, 2020, for a city subject to section 2 (3) of this 2019 Act.

(b) June 30, 2021, for a local government subject to section 2 (2) of this 2019 Act.

(5) The department shall grant or deny a request for an extension under this section:

(a) Within 90 days of receipt of a complete request from a city subject to section 2 (3) of this 2019 Act.

(b) Within 120 days of receipt of a complete request from a local government subject to section 2 (2) of this 2019 Act.

(6) The department shall adopt rules regarding the form and substance of a local government's application for an extension under this section. The department may include rules regarding:

(a) Defining the affected areas;

(b) Calculating deficiencies of water, sewer, storm drainage or transportation services;

(c) Service deficiency levels required to qualify for the extension;

(d) The components and timing of a remediation plan necessary to qualify for an extension;

(e) Standards for evaluating applications; and

(f) Establishing deadlines and components for the approval of a plan of action.

SECTION 5. ORS 197.296 is amended to read:

197.296. (1)(a) The provisions of subsections (2) to (9) of this section apply to metropolitan service district regional framework plans and local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of 25,000 or more.

(b) The Land Conservation and Development Commission may establish a set of factors under which additional cities are subject to the provisions of this section. In establishing the set of factors required under this paragraph, the commission shall consider the size of the city, the rate of population growth of the city or the proximity of the city to another city with a population of 25,000 or more or to a metropolitan service district.

(2) At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan or regional framework plan that concerns the urban growth boundary and requires the application of a statewide planning goal relating to buildable lands for residential use, a local government shall demonstrate that its comprehensive plan or regional framework plan provides sufficient buildable lands within the urban growth boundary established pursuant to statewide planning goals to accommodate estimated housing needs for 20 years. The 20-year period shall commence on the date initially scheduled for completion of the periodic or legislative review.

(3) In performing the duties under subsection (2) of this section, a local government shall:

(a) Inventory the supply of buildable lands within the urban growth boundary and determine the housing capacity of the buildable lands; and

(b) Conduct an analysis of **existing and projected** housing need by type and density range, in accordance with **all factors under** ORS 197.303 and statewide planning goals and rules relating to housing, to determine the number of units and amount of land needed for each needed housing type for the next 20 years.

(4)(a) For the purpose of the inventory described in subsection (3)(a) of this section, "buildable lands" includes:

(A) Vacant lands planned or zoned for residential use;

(B) Partially vacant lands planned or zoned for residential use;

(C) Lands that may be used for a mix of residential and employment uses under the existing planning or zoning; and

(D) Lands that may be used for residential infill or redevelopment.

(b) For the purpose of the inventory and determination of housing capacity described in subsection (3)(a) of this section, the local government must demonstrate consideration of:

(A) The extent that residential development is prohibited or restricted by local regulation and ordinance, state law and rule or federal statute and regulation;

(B) A written long term contract or easement for radio, telecommunications or electrical facilities, if the written contract or easement is provided to the local government; and

(C) The presence of a single family dwelling or other structure on a lot or parcel.

(c) Except for land that may be used for residential infill or redevelopment, a local government shall create a map or document that may be used to verify and identify specific lots or parcels that have been determined to be buildable lands.

(5)(a) Except as provided in paragraphs (b) and (c) of this subsection, the determination of housing capacity [*and need*] pursuant to subsection [*(3)*] **(3)(a)** of this section must be based on data relating to land within the urban growth boundary that has been collected since the last [*periodic*] review or [*five*] **six** years, whichever is greater. The data shall include:

(A) The number, density and average mix of housing types of urban residential development that have actually occurred;

(B) Trends in density and average mix of housing types of urban residential development;

(C) Market factors that may substantially impact future urban residential development; and

[*(C) Demographic and population trends;*]

[*(D) Economic trends and cycles; and*]

[*(E)*] **(D)** The number, density and average mix of housing types that have occurred on the buildable lands described in subsection (4)(a) of this section.

(b) A local government shall make the determination described in paragraph (a) of this subsection using a shorter time period than the time period described in paragraph (a) of this subsection if the local government finds that the shorter time period will provide more accurate and reliable data related to housing capacity [*and need*]. The shorter time period may not be less than three years.

(c) A local government shall use data from a wider geographic area or use a time period [*for economic cycles and trends*] longer than the time period described in paragraph (a) of this subsection if the analysis of a wider geographic area or the use of a longer time period will provide more accurate, complete and reliable data relating to trends affecting housing need than an analysis performed pursuant to paragraph (a) of this subsection. The local government must clearly describe the geographic area, time frame and source of data used in a determination performed under this paragraph.

(6) If the housing need determined pursuant to subsection (3)(b) of this section is greater than the housing capacity determined pursuant to subsection (3)(a) of this section, the local government shall take one or [*more*] **both** of the following actions to accommodate the additional housing need:

(a) Amend its urban growth boundary to include sufficient buildable lands to accommodate housing needs for the next 20 years. As part of this process, the local government shall consider the effects of measures taken pursuant to paragraph (b) of this subsection. The amendment shall include sufficient land reasonably necessary to accommodate the siting of new public school facilities. The need and inclusion of lands for new public school facilities shall be a coordinated process between the affected public school districts and the local government that has the authority to approve the urban growth boundary[*;*]**.**

(b) Amend its comprehensive plan, regional framework plan, functional plan or land use regulations to include new measures that demonstrably increase the likelihood that residential development will occur at densities sufficient to accommodate housing needs for the next 20 years without expansion of the urban growth boundary. A local government or metropolitan service district that takes this action shall [*monitor and record the level of development activity and development density by housing type following the date of the adoption of the new measures; or*] **adopt findings regarding the density expectations assumed to result from measures adopted under this paragraph based upon the factors listed in ORS 197.303 (2) and data in subsection (5)(a) of this section. The density expectations may not project an increase in residential capacity above achieved density by more than three percent without quantifiable validation of such departures. For a local government located outside of a metropolitan service district, a quantifiable vali-**

dation must demonstrate that the assumed housing capacity has been achieved in areas that are zoned to allow no greater than the same authorized density level within the local jurisdiction or a jurisdiction in the same region. For a metropolitan service district, a quantifiable validation must demonstrate that the assumed housing capacity has been achieved in areas that are zoned to allow no greater than the same authorized density level within the metropolitan service district.

[*(c) Adopt a combination of the actions described in paragraphs (a) and (b) of this subsection.*]

(c) As used in this subsection, "authorized density level" has the meaning given that term in ORS 227.175.

(7) Using the **housing need** analysis conducted under subsection (3)(b) of this section, the local government shall determine the overall average density and overall mix of housing types at which residential development of needed housing types must occur in order to meet housing needs over the next 20 years. If that density is greater than the actual density of development determined under subsection (5)(a)(A) of this section, or if that mix is different from the actual mix of housing types determined under subsection (5)(a)(A) of this section, the local government, as part of its periodic review, shall adopt measures that demonstrably increase the likelihood that residential development will occur at the housing types and density and at the mix of housing types required to meet housing needs over the next 20 years.

(8)(a) A local government outside a metropolitan service district that takes any actions under subsection (6) or (7) of this section shall demonstrate that the comprehensive plan and land use regulations comply with goals and rules adopted by the commission and implement ORS 197.295 to 197.314.

(b) [*The*] **A** local government shall determine the density and mix of housing types anticipated as a result of actions taken under subsections (6) and (7) of this section and monitor and record the actual density and mix of housing types achieved **following the adoption of these actions**. The local government shall compare actual and anticipated density and mix. The local government shall submit its comparison to the commission at the next periodic review or at the next legislative review of its urban growth boundary, whichever comes first.

(9) In establishing that actions and measures adopted under subsections (6) and (7) of this section demonstrably increase the likelihood of higher density residential development, the local government shall at a minimum ensure that land zoned for needed housing is in locations appropriate for the housing types identified under subsection (3) of this section**,** [*and*] is zoned at density ranges that are likely to be achieved by the housing market using the analysis in subsection (3) of this section **and is in areas where sufficient urban services are planned to enable the higher density development to occur over the 20-year period**. Actions or measures, or both, may include but are not limited to:

(a) Increases in the permitted density on existing residential land;

(b) Financial incentives for higher density housing;

(c) Provisions permitting additional density beyond that generally allowed in the zoning district in exchange for amenities and features provided by the developer;

(d) Removal or easing of approval standards or procedures;

(e) Minimum density ranges;

(f) Redevelopment and infill strategies;

(g) Authorization of housing types not previously allowed by the plan or regulations;

(h) Adoption of an average residential density standard; and

(i) Rezoning or redesignation of nonresidential land.

(10)(a) The provisions of this subsection apply to local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of less than 25,000.

(b) At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan that requires the application of a statewide planning goal relating to buildable lands for residential use, a city shall, according to rules of the commission:

(A) Determine the estimated housing needs within the jurisdiction for the next 20 years;

(B) Inventory the supply of buildable lands available within the urban growth boundary to accommodate the estimated housing needs determined under this subsection; and

(C) Adopt measures necessary to accommodate the estimated housing needs determined under this subsection.

(c) For the purpose of the inventory described in this subsection, "buildable lands" includes those lands described in subsection (4)(a) of this section.

SECTION 6. ORS 197.303 is amended to read:

197.303. (1) As used in ORS [*197.307*] **197.295 to 197.314**, "needed housing" means all housing on land zoned for residential use or mixed residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes, as those terms are defined by the United States Department of Housing and Urban Development under 42 U.S.C. 1437a. "Needed housing" includes the following housing types:

(a) Attached and detached single-family housing and multiple family housing for both owner and renter occupancy;

(b) Government assisted housing;

(c) Mobile home or manufactured dwelling parks as provided in ORS 197.475 to 197.490;

(d) Manufactured homes on individual lots planned and zoned for single-family residential use that are in addition to lots within designated manufactured dwelling subdivisions; and

(e) Housing for farmworkers.

(2) For the purpose of estimating housing needs, as described in ORS 197.296 (3)(b), a local government shall use the population projections prescribed by ORS 195.033 or 195.036 and shall consider and adopt findings related to changes in each of the following factors since the last periodic or legislative review or six years, whichever is greater, and the projected future changes in these factors over a 20-year planning period:

(a) Household sizes;

(b) Household demographics in terms of age, gender, race or other established demographic category;

(c) Household incomes;

(d) Vacancy rates; and

(e) Housing costs.

(3) A local government shall make the estimate described in subsection (2) of this section using a shorter time period than since the last periodic or legislative review or six years, whichever is greater, if the local government finds that the shorter time period will provide more accurate and reliable data related to housing need. The shorter time period may not be less than three years.

(4) A local government shall use data from a wider geographic area or use a time period longer than the time period described in subsection (2) of this section if the analysis of a wider geographic area or the use of a longer time period will provide more accurate, complete and reliable data relating to trends affecting housing need than an analysis performed pursuant to subsection (2) of this section. The local government must clearly describe the geographic area, time frame and source of data used in an estimate performed under this subsection.

[*(2)*] **(5)** Subsection (1)(a) and (d) of this section does not apply to:

(a) A city with a population of less than 2,500.

(b) A county with a population of less than 15,000.

[*(3)*] **(6)** A local government may take an exception under ORS 197.732 to the definition of "needed housing" in subsection (1) of this section in the same manner that an exception may be taken under the goals.

SECTION 7. ORS 197.312, as amended by section 7, chapter 15, Oregon Laws 2018, is amended to read:

197.312. (1) A city or county may not by charter prohibit from all residential zones attached or detached single-family housing, multifamily housing for both owner and renter occupancy or manufactured homes. A city or county may not by charter prohibit government assisted housing or impose additional approval standards on government assisted housing that are not applied to similar but unassisted housing.

(2)(a) A single-family dwelling for a farmworker and the farmworker's immediate family is a permitted use in any residential or commercial zone that allows single-family dwellings as a permitted use.

(b) A city or county may not impose a zoning requirement on the establishment and maintenance of a single-family dwelling for a farmworker and the farmworker's immediate family in a residential or commercial zone described in paragraph (a) of this subsection that is more restrictive than a zoning requirement imposed on other single-family dwellings in the same zone.

(3)(a) Multifamily housing for farmworkers and farmworkers' immediate families is a permitted use in any residential or commercial zone that allows multifamily housing generally as a permitted use.

(b) A city or county may not impose a zoning requirement on the establishment and maintenance of multifamily housing for farmworkers and farmworkers' immediate families in a residential or commercial zone described in paragraph (a) of this subsection that is more restrictive than a zoning requirement imposed on other multifamily housing in the same zone.

(4) A city or county may not prohibit a property owner or developer from maintaining a real estate sales office in a subdivision or planned community containing more than 50 lots or dwelling units for the sale of lots or dwelling units that remain available for sale to the public.

(5)(a) A city with a population greater than 2,500 or a county with a population greater than 15,000 shall allow in areas within the urban growth boundary that are zoned for detached single-family dwellings the development of at least one accessory dwelling unit for each detached single-family dwelling, subject to reasonable local regulations relating to siting and design.

(b) As used in this subsection[,]**:**

(A) "Accessory dwelling unit" means an interior, attached or detached residential structure that is used in connection with or that is accessory to a single-family dwelling.

(B) "Reasonable local regulations relating to siting and design" does not include owner-occupancy requirements of either the primary or accessory structure or requirements to construct additional off-street parking.

(6) Subsection (5) of this section does not prohibit local governments from regulating vacation occupancies, as defined in ORS 90.100, to require owner-occupancy or off-street parking.

SECTION 8. Section 1, chapter 47, Oregon Laws 2018, is amended to read:

Sec. 1. (1) For purposes of this section:

(a) A household is severely rent burdened if the household spends more than 50 percent of the income of the household on gross rent for housing.

(b) A regulated affordable unit is a residential unit subject to a regulatory agreement that runs with the land and that requires affordability for an established income level for a defined period of time.

[*(c) A single-family unit may be rented or owned by a household and includes single-family homes, duplexes, townhomes, row homes and mobile homes.*]

(2)(a) The Housing and Community Services Department shall annually provide to the governing body of each city in this state with a population greater than 10,000 the most current data available from the United States Census Bureau, or any other source the department considers at least as reliable, showing the percentage of renter households in the city that are severely rent burdened.

(b) The Housing and Community Services Department, in collaboration with the Department of Land Conservation and Development, shall develop a survey form on which the governing body of a city may provide specific information related to the affordability of housing within the city, including, but not limited to:

(A) The actions relating to land use and other related matters that the governing body has taken to increase the affordability of housing and reduce rent burdens for severely rent burdened households; and

(B) The additional actions the governing body intends to take to reduce rent burdens for severely rent burdened households.

(c) If the Housing and Community Services Department determines that at least 25 percent of the renter households in a city are severely rent burdened, the department shall provide the governing body of the city with the survey form developed pursuant to paragraph (b) of this subsection.

(d) The governing body of the city shall return the completed survey form to the Housing and Community Services Department and the Department of Land Conservation and Development within 60 days of receipt.

(3)(a) In any year in which the governing body of a city is informed under this section that at least 25 percent of the renter households in the city are severely rent burdened, the governing body shall hold at least one public meeting to discuss the causes and consequences of severe rent burdens within the city, the barriers to reducing rent burdens and possible solutions.

(b) The Housing and Community Services Department may adopt rules governing the conduct of the public meeting required under this subsection.

(4) No later than February 1 of each year, the governing body of each city in this state with a population greater than 10,000 shall submit to the Department of Land Conservation and Development a report for the immediately preceding calendar year setting forth separately for each of the following categories the total number of units that were permitted and the total number that were produced:

(a) Residential units.

(b) Regulated affordable residential units.

(c) Multifamily residential units.

(d) Regulated affordable multifamily residential units.

(e) Single-family [*units*] **homes**.

(f) Regulated affordable single-family [*units*] **homes**.

(g) Accessory dwelling units.

(h) Regulated affordable accessory dwelling units.

(i) Units of middle housing, as defined in section 2 of this 2019 Act.

(j) Regulated affordable units of middle housing.

SECTION 9. ORS 455.610 is amended to read:

455.610. (1) The Director of the Department of Consumer and Business Services shall adopt, and amend as necessary, a Low-Rise Residential Dwelling Code that contains all requirements, including structural design provisions, related to the construction of residential dwellings three stories or less above grade. The code provisions for plumbing and electrical requirements must be compatible with other specialty codes adopted by the director. The Electrical and Elevator Board, the Mechanical Board and the State Plumbing Board shall review, respectively, amendments to the electrical, mechanical or plumbing provisions of the code.

(2) Changes or amendments to the code adopted under subsection (1) of this section may be made when:

(a) Required by geographic or climatic conditions unique to Oregon;

(b) Necessary to be compatible with other statutory provisions;

(c) Changes to the national codes are adopted in Oregon; or

(d) Necessary to authorize the use of building materials and techniques that are consistent with nationally recognized standards and building practices.

(3) Notwithstanding ORS 455.030, 455.035, 455.110 and 455.112, the director may, at any time following appropriate consultation with the Mechanical Board or Building Codes Structures Board,

amend the mechanical specialty code or structural specialty code to ensure compatibility with the Low-Rise Residential Dwelling Code.

(4) The water conservation provisions for toilets, urinals, shower heads and interior faucets adopted in the Low-Rise Residential Dwelling Code shall be the same as those adopted under ORS 447.020 to meet the requirements of ORS 447.145.

(5) The Low-Rise Residential Dwelling Code shall be adopted and amended as provided by ORS 455.030 and 455.110.

(6) The director, by rule, shall establish uniform standards for a municipality to allow an alternate method of construction to the requirements for one and two family dwellings built to the Low-Rise Residential Dwelling Code in areas where the local jurisdiction determines that the fire apparatus means of approach to a property or water supply serving a property does not meet applicable fire code or state building code requirements. The alternate method of construction, which may include but is not limited to the installation of automatic fire sprinkler systems, must be approved in conjunction with the approval of an application under ORS 197.522.

(7) For lots of record existing before July 2, 2001, or property that receives any approval for partition, subdivision or construction under ORS 197.522 before July 2, 2001, a municipality allowing an alternate method of construction to the requirements for one and two family dwellings built to the Low-Rise Residential Dwelling Code may apply the uniform standards established by the director pursuant to subsection (6) of this section. For property that receives all approvals for partition, subdivision or construction under ORS 197.522 on or after July 2, 2001, a municipality allowing an alternate method of construction to the requirements for one and two family dwellings built to the Low-Rise Residential Dwelling Code must apply the uniform standards established by the director pursuant to subsection (6) of this section.

(8) The director, by rule, shall establish uniform standards for a municipality to allow alternate approval of construction related to conversions of single-family dwellings into no more than four residential dwelling units built to the Low-Rise Residential Dwelling Code that received occupancy approval prior to January 1, 2020. The standards established under this subsection must include standards describing the information that must be submitted before an application for alternate approval will be deemed complete.

(9)(a) A building official described in ORS 455.148 or 455.150 must approve or deny an application for alternate approval under subsection (8) of this section no later than 15 business days after receiving a complete application.

(b) A building official who denies an application for alternate approval under this subsection shall provide to the applicant:

(A) A written explanation of the basis for the denial; and

(B) A statement that describes the applicant's appeal rights under subsection (10) of this section.

(10)(a) An appeal from a denial under subsection (9) of this section must be made through a municipal administrative process. A municipality shall provide an administrative process that:

(A) Is other than a judicial proceeding in a court of law; and

(B) Affords the party an opportunity to appeal the denial before an individual, department or body that is other than a plan reviewer, inspector or building official for the municipality.

(b) A decision in an administrative process under this subsection must be completed no later than 30 business days after the building official receives notice of the appeal.

(c) Notwithstanding ORS 455.690, a municipal administrative process required under this subsection is the exclusive means for appealing a denial under subsection (9) of this section.

(11) The costs incurred by a municipality under subsections (9) and (10) of this section are building inspection program administration and enforcement costs for the purpose of fee adoption under ORS 455.210.

<u>SECTION 10.</u> (1) It is the policy of the State of Oregon to reduce to the extent practicable administrative and permitting costs and barriers to the construction of middle housing, as defined in section 2 of this 2019 Act, while maintaining safety, public health and the general welfare with respect to construction and occupancy.

(2) The Department of Consumer and Business Services shall submit a report describing rules and standards relating to low-rise residential dwellings proposed under ORS 455.610, as amended by section 9 of this 2019 Act, in the manner provided in ORS 192.245, to an interim committee of the Legislative Assembly related to housing no later than January 1, 2020.

<u>SECTION 11.</u> Section 12 of this 2019 Act is added to and made a part of ORS 94.550 to 94.783.

<u>SECTION 12.</u> A provision in a governing document that is adopted or amended on or after the effective date of this 2019 Act, is void and unenforceable to the extent that the provision would prohibit or have the effect of unreasonably restricting the development of housing that is otherwise allowable under the maximum density of the zoning for the land.

<u>SECTION 13.</u> A provision in a recorded instrument affecting real property is not enforceable if:

(1) The provision would allow the development of a single-family dwelling on the real property but would prohibit the development of:

(a) Middle housing, as defined in section 2 of this 2019 Act; or

(b) An accessory dwelling unit allowed under ORS 197.312 (5); and

(2) The instrument was executed on or after the effective date of this 2019 Act.

<u>SECTION 14.</u> (1) Sections 2, 12 and 13 of this 2019 Act and the amendments to ORS 197.296, 197.303, 197.312 and 455.610 and section 1, chapter 47, Oregon Laws 2018, by sections 5 to 9 of this 2019 Act become operative on January 1, 2020.

(2) The Land Conservation and Development Commission, the Department of Consumer and Business Services and the Residential and Manufactured Structures Board may take any actions before the operative date specified in subsection (1) of this section necessary to enable the commission, department or board to exercise, on or after the operative date specified in subsection (1) of this section, the duties required under sections 2, 3 and 10 of this 2019 Act and the amendments to ORS 455.610 by section 9 of this 2019 Act.

<u>SECTION 15.</u> In addition to and not in lieu of any other appropriation, there is appropriated to the Department of Land Conservation and Development, for the biennium beginning July 1, 2019, out of the General Fund, the amount of $3,500,000 for the purpose of providing technical assistance to local governments in implementing section 3 (1) of this 2019 Act and to develop plans to improve water, sewer, storm drainage and transportation services as described in section 4 (2) of this 2019 Act. The department shall prioritize technical assistance to cities or counties with limited planning staff or that commit to implementation earlier than the date required under section 3 (1) of this 2019 Act.

<u>SECTION 16.</u> This 2019 Act being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this 2019 Act takes effect on its passage.

CHAPTER ....

AN ACT

Relating to buildings; creating new provisions; amending ORS 197.296, 197.299, 197.303, 197.319, 197.320, 215.416, 215.441, 227.175, 227.500 and 455.062 and section 1, chapter 47, Oregon Laws 2018, and section 3, chapter 97, Oregon Laws 2019 (Enrolled Senate Bill 39); and declaring an emergency.

Be It Enacted by the People of the State of Oregon:

SECTION 1. (1) As used in this section:

(a) "Area median income" means the median income for households established by the United States Department of Housing and Urban Development.

(b) "Existing housing stock" means housing, by affordability level and type, actually constructed in a city or Metro.

(c) "High income" means above 120 percent of the area median income.

(d) "Housing shortage" means the difference between the estimated housing units of different affordability levels and housing types needed to accommodate the existing population and the existing housing stock, measured in dwelling units.

(e) "Low income" means income above 50 percent and at or below 80 percent of the area median income.

(f) "Metro" means a metropolitan service district organized under ORS chapter 268.

(g) "Moderate income" means income above 80 percent and at or below 120 percent of the area median income.

(h) "Region" has the meaning given that term in ORS 284.752.

(i) "Very low income" means income at or below 50 percent of the area median income.

(2) The Housing and Community Services Department, in coordination with the Department of Land Conservation and Development and the Oregon Department of Administrative Services, shall develop a methodology for calculating:

(a) A regional housing needs analysis that identifies the total number of housing units necessary to accommodate anticipated populations in a region over the next 20 years based on:

(A) Trends in density and in the average mix of housing types of urban residential development;

(B) Demographic and population trends;

(C) Economic trends and cycles; and

(D) Equitable distribution of publicly supported housing within a region.

(b) An estimate of existing housing stock of each city and Metro.

(c) A housing shortage analysis for each city and Metro.

(d) An estimate of the number of housing units necessary to accommodate anticipated population growth over the next 20 years for each city and Metro.

(3) The methodologies for calculating the regional housing needs analysis, the estimate of existing housing stock, the housing shortage analysis and the estimate of housing necessary to accommodate growth that are developed under subsection (2) of this section must classify housing by:

(a) Housing type, including attached and detached single-family housing, multifamily housing and manufactured dwellings or mobile homes; and

(b) Affordability, by housing that is affordable to households with:

(A) Very low income;

(B) Low income;

(C) Moderate income; or

(D) High income.

(4) No later than September 1, 2020, the Housing and Community Services Department, in coordination with the Department of Land Conservation and Development and the Oregon Department of Administrative Services, shall conduct for each region a regional housing needs analysis and, for each city and Metro, shall estimate existing housing stock, conduct a housing shortage analysis and estimate the housing necessary to accommodate growth.

(5) In developing the methodologies and conducting the analyses under this section, the Housing and Community Services Department may:

(a) Consult or contract with subject matter experts, cities and Metro, regional solutions centers described in ORS 284.754 (2) and other jurisdictions that have created or conducted regional housing needs analyses.

(b) Consider the most recent consolidated population forecast produced by the Portland State University Population Research Center in making any relevant calculation or forecast.

(c) Consider any other relevant existing analyses, data and other information collected or produced by state agencies or public entities.

(d) Make changes to the regional boundaries in order to make regions more accurately align with shared employment, transportation or housing market dynamics.

SECTION 2. (1) No later than March 1, 2021, the Housing and Community Services Department, in consultation with the Department of Land Conservation and Development and the Oregon Department of Administrative Services, shall submit a report, in the manner provided in ORS 192.245 to an appropriate committee of the Legislative Assembly, that summarizes the findings of the regional housing needs analysis, estimate of housing stock, housing shortage analysis and estimate of housing necessary to accommodate growth conducted under section 1 (4) of this 2019 Act.

(2) No later than March 1, 2021, the Department of Land Conservation and Development, in consultation with the Oregon Department of Administrative Services and the Housing and Community Services Department, shall submit a report, in the manner provided in ORS 192.245, to an appropriate committee of the Legislative Assembly that evaluates:

(a) Whether a regional housing needs analysis and housing shortage analysis described in section 1 of this 2019 Act could appropriately allocate among the cities or local governments in a region the housing shortage described;

(b) How a regional housing needs analysis and housing shortage analysis may compare to existing assessments of housing need and capacity conducted by local governments under ORS 197.296 (3) and (10) in terms of:

(A) Cost and cost effectiveness;

(B) Reliability and accuracy;

(C) Repeatability; and

(D) Predictability;

(c) How a regional housing needs analysis and housing shortage analysis may relate to statewide planning goals related to housing and any rules and policies adopted pursuant to these goals and ORS 197.295 to 197.314;

(d) Whether different boundaries would be more appropriate for defining regions within the regional housing needs analysis based on:

(A) Relevance of data in appropriately defining a commuting, employment or housing market; or

(B) Ease or cost of collecting or analyzing data;

(e) Other ways in which the regional housing needs analysis or housing shortage analysis could be improved; and

(f) Whether the regional housing needs analysis, or an improved version, could serve as an acceptable methodology statewide for land use planning relating to housing.

(3) In preparing the report required under subsection (2) of this section, the Department of Land Conservation and Development may consult or contract with other state agencies, subject matter experts, private firms, local governments, regional solutions centers described in ORS 284.754 (2) and other jurisdictions that have created or conducted regional housing needs analyses.

SECTION 3. Sections 4 to 6 of this 2019 Act are added to and made a part of ORS 197.295 to 197.314.

SECTION 4. (1) A city with a population greater than 10,000 shall develop and adopt a housing production strategy under this section no later than one year after:

(a) The city's deadline for completing a housing capacity analysis under ORS 197.296 (2)(a);

(b) The city's deadline for completing a housing capacity analysis under ORS 197.296 (10)(b); or

(c) A date scheduled by the Land Conservation and Development Commission following the allocation of housing capacity to the city by a metropolitan service district under ORS 197.299 (2)(d).

(2) A housing production strategy must include a list of specific actions, including the adoption of measures and policies, that the city shall undertake to promote development within the city to address a housing need identified under ORS 197.296 (6) for the most recent 20-year period described in ORS 197.296 (2)(b). Actions under this subsection may include:

(a) The reduction of financial and regulatory impediments to developing needed housing, including removing or easing approval standards or procedures for needed housing at higher densities or that is affordable;

(b) The creation of financial and regulatory incentives for development of needed housing, including creating incentives for needed housing at higher densities or that is affordable; and

(c) The development of a plan to access resources available at local, regional, state and national levels to increase the availability and affordability of needed housing.

(3) In creating a housing production strategy, a city shall review and consider:

(a) Socioeconomic and demographic characteristics of households living in existing needed housing;

(b) Market conditions affecting the provision of needed housing;

(c) Measures already adopted by the city to promote the development of needed housing;

(d) Existing and expected barriers to the development of needed housing; and

(e) For each action the city includes in its housing production strategy:

(A) The schedule for its adoption;

(B) The schedule for its implementation;

(C) Its expected magnitude of impact on the development of needed housing; and

(D) The time frame over which it is expected to impact needed housing.

(4) The housing production strategy must include within its index a copy of the city's most recently completed survey under section 1 (2), chapter 47, Oregon Laws 2018.

(5) The adoption of a housing production strategy is not a land use decision and is not subject to appeal or review except as provided in section 5 of this 2019 Act.

SECTION 5. (1) No later than 20 days after a city's adoption or amendment of a housing production strategy under section 4 of this 2019 Act, a city shall submit the adopted strategy or amended strategy to the Department of Land Conservation and Development.

(2) The submission under subsection (1) of this section must include copies of:

(a) The signed decision adopting the housing production strategy or amended strategy;

(b) The text of the housing production strategy clearly indicating any amendments to the most recent strategy submitted under this section;

(c) A brief narrative summary of the housing production strategy; and

(d) The information reviewed and considered under section 6 (2) of this 2019 Act.

(3) On the same day the city submits notice of the housing production strategy or amended strategy, the city shall provide a notice to persons that participated in the proceedings that led to the adoption of the strategy and requested notice in writing.

(4) Within 10 days of receipt of the submission under subsection (1) of this section, the department shall provide notice to persons described under ORS 197.615 (3).

(5) The notices given under subsections (3) and (4) of this section must state:

(a) How and where materials described in subsection (2) of this section may be freely obtained;

(b) That comments on the strategy may be submitted to the department within 45 days after the department has received the submission; and

(c) That there is no further right of appeal.

(6) Based upon criteria adopted by the Land Conservation and Development Commission, including any criteria adopted under section 6 (2) of this 2019 Act, the department shall, within 120 days after receiving the submission under subsection (1) of this section:

(a) Approve the housing production strategy;

(b) Approve the housing production strategy, subject to further review and actions under section 6 (2) of this 2019 Act; or

(c) Remand the housing production strategy for further modification as identified by the department.

(7) A determination by the department under subsection (6) of this section is not a land use decision and is final and not subject to appeal.

SECTION 6. (1) The Land Conservation and Development Commission, in consultation with the Housing and Community Services Department, shall adopt criteria for reviewing and identifying cities with a population greater than 10,000 that have not sufficiently:

(a) Achieved production of needed housing within their jurisdiction; or

(b) Implemented a housing production strategy adopted under section 4 of this 2019 Act.

(2) The criteria adopted by the commission under subsection (1) of this section may include the city's:

(a) Unmet housing need as described in ORS 197.296 (6);

(b) Unmet housing need in proportion to the city's population;

(c) Percentage of households identified as severely rent burdened as described in section 1, chapter 47, Oregon Laws 2018;

(d) Recent housing development;

(e) Recent adoption of a housing production strategy under section 4 of this 2019 Act or adoption of actions pursuant to a housing production strategy;

(f) Recent or frequent previous identification by the Department of Land Conservation and Development under this section; or

(g) Other attributes that the commission considers relevant.

(3) The Department of Land Conservation and Development may review cities under the criteria adopted under subsection (2) of this section for the purposes of prioritizing actions by the department, including:

(a) Awarding available technical or financial resources;

(b) Providing enhanced review and oversight of the city's housing production strategy;

(c) Requiring a report and explanation if a city does not implement an action within the approximate time frame scheduled within a housing production strategy;

(d) Entering into agreements with the city relating to the city's modification or implementation of its housing production strategy; or

(e) Petitioning the commission to act under ORS 197.319 to 197.335 to require the city to comply with ORS 197.295 to 197.314 or statewide land use planning goals related to housing or urbanization.

SECTION 7. No later than December 31, 2019, the Land Conservation and Development Commission shall adopt a schedule by which metropolitan service districts and cities described in ORS 197.296 (2)(a)(B) and (10)(c)(B) shall demonstrate sufficient buildable lands. Dates in the schedule may not be earlier than two years following the commission's creation of rules implementing sections 4 to 6 of this 2019 Act and the amendments to ORS 197.296 and 197.299 by sections 8 and 9 of this 2019 Act.

SECTION 8. ORS 197.296 is amended to read:

197.296. (1)(a) The provisions of subsections (2) to (9) of this section apply to metropolitan service district regional framework plans and local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of 25,000 or more.

(b) The Land Conservation and Development Commission may establish a set of factors under which additional cities are subject to the provisions of this section. In establishing the set of factors required under this paragraph, the commission shall consider the size of the city, the rate of population growth of the city or the proximity of the city to another city with a population of 25,000 or more or to a metropolitan service district.

(2)**(a)** [*At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan or regional framework plan that concerns the urban growth boundary and requires the application of a statewide planning goal relating to buildable lands for residential use,*] A local government shall demonstrate that its comprehensive plan or regional framework plan provides sufficient buildable lands within the urban growth boundary established pursuant to statewide planning goals to accommodate estimated housing needs for 20 years**:**

(A) At periodic review under ORS 197.628 to 197.651;

(B) As scheduled by the commission:

(i) At least once each eight years for local governments that are not within a metropolitan service district; or

(ii) At least once each six years for a metropolitan service district; or

(C) At any other legislative review of the comprehensive plan or regional framework plan that concerns the urban growth boundary and requires the application of a statewide planning goal relating to buildable lands for residential use.

(b) The 20-year period shall commence on the date initially scheduled for completion of the [*periodic or legislative*] review **under paragraph (a) of this subsection**.

(3) In performing the duties under subsection (2) of this section, a local government shall:

(a) Inventory the supply of buildable lands within the urban growth boundary and determine the housing capacity of the buildable lands; and

(b) Conduct an analysis of housing need by type and density range, in accordance with ORS 197.303 and statewide planning goals and rules relating to housing, to determine the number of units and amount of land needed for each needed housing type for the next 20 years.

(4)(a) For the purpose of the inventory described in subsection (3)(a) of this section, "buildable lands" includes:

(A) Vacant lands planned or zoned for residential use;

(B) Partially vacant lands planned or zoned for residential use;

(C) Lands that may be used for a mix of residential and employment uses under the existing planning or zoning; and

(D) Lands that may be used for residential infill or redevelopment.

(b) For the purpose of the inventory and determination of housing capacity described in subsection (3)(a) of this section, the local government must demonstrate consideration of:

(A) The extent that residential development is prohibited or restricted by local regulation and ordinance, state law and rule or federal statute and regulation;

(B) A written long term contract or easement for radio, telecommunications or electrical facilities, if the written contract or easement is provided to the local government; and

(C) The presence of a single family dwelling or other structure on a lot or parcel.

(c) Except for land that may be used for residential infill or redevelopment, a local government shall create a map or document that may be used to verify and identify specific lots or parcels that have been determined to be buildable lands.

(5)(a) Except as provided in paragraphs (b) and (c) of this subsection, the determination of housing capacity and need pursuant to subsection (3) of this section must be based on data relating to land within the urban growth boundary that has been collected since the last [*periodic*] review [*or*] **under subsection (2)(a)(B) of this section** [*five years, whichever is greater*]. The data shall include:

(A) The number, density and average mix of housing types of urban residential development that have actually occurred;

(B) Trends in density and average mix of housing types of urban residential development;

(C) Demographic and population trends;

(D) Economic trends and cycles; and

(E) The number, density and average mix of housing types that have occurred on the buildable lands described in subsection (4)(a) of this section.

(b) A local government shall make the determination described in paragraph (a) of this subsection using a shorter time period than the time period described in paragraph (a) of this subsection if the local government finds that the shorter time period will provide more accurate and reliable data related to housing capacity and need. The shorter time period may not be less than three years.

(c) A local government shall use data from a wider geographic area or use a time period for economic cycles and trends longer than the time period described in paragraph (a) of this subsection if the analysis of a wider geographic area or the use of a longer time period will provide more accurate, complete and reliable data relating to trends affecting housing need than an analysis performed pursuant to paragraph (a) of this subsection. The local government must clearly describe the geographic area, time frame and source of data used in a determination performed under this paragraph.

(6) If the housing need determined pursuant to subsection (3)(b) of this section is greater than the housing capacity determined pursuant to subsection (3)(a) of this section, the local government shall take one or more of the following actions to accommodate the additional housing need:

(a) Amend its urban growth boundary to include sufficient buildable lands to accommodate housing needs for the next 20 years. As part of this process, the local government shall consider the effects of measures taken pursuant to paragraph (b) of this subsection. The amendment shall include sufficient land reasonably necessary to accommodate the siting of new public school facilities. The need and inclusion of lands for new public school facilities shall be a coordinated process between the affected public school districts and the local government that has the authority to approve the urban growth boundary;

(b) Amend its comprehensive plan, regional framework plan, functional plan or land use regulations to include new measures that demonstrably increase the likelihood that residential development will occur at densities sufficient to accommodate housing needs for the next 20 years without expansion of the urban growth boundary. A local government or metropolitan service district that takes this action shall monitor and record the level of development activity and development density by housing type following the date of the adoption of the new measures; or

(c) Adopt a combination of the actions described in paragraphs (a) and (b) of this subsection.

(7) Using the analysis conducted under subsection (3)(b) of this section, the local government shall determine the overall average density and overall mix of housing types at which residential development of needed housing types must occur in order to meet housing needs over the next 20 years. If that density is greater than the actual density of development determined under subsection (5)(a)(A) of this section, or if that mix is different from the actual mix of housing types determined under subsection (5)(a)(A) of this section, the local government, as part of its periodic review, shall adopt measures that demonstrably increase the likelihood that residential development will occur at the housing types and density and at the mix of housing types required to meet housing needs over the next 20 years.

(8)(a) A local government outside a metropolitan service district that takes any actions under subsection (6) or (7) of this section shall demonstrate that the comprehensive plan and land use regulations comply with goals and rules adopted by the commission and implement ORS 197.295 to 197.314.

(b) The local government shall determine the density and mix of housing types anticipated as a result of actions taken under subsections (6) and (7) of this section and monitor and record the actual density and mix of housing types achieved. The local government shall compare actual and anticipated density and mix. The local government shall submit its comparison to the commission at the next [*periodic review or at the next legislative*] review of its urban growth boundary[*, whichever comes first*] **under subsection (2)(a) of this section**.

(9) In establishing that actions and measures adopted under subsections (6) and (7) of this section demonstrably increase the likelihood of higher density residential development, the local government shall at a minimum ensure that land zoned for needed housing is in locations appropriate for the housing types identified under subsection (3) of this section and is zoned at density ranges that are likely to be achieved by the housing market using the analysis in subsection (3) of this section. Actions or measures, or both, may include but are not limited to:

(a) Increases in the permitted density on existing residential land;

(b) Financial incentives for higher density housing;

(c) Provisions permitting additional density beyond that generally allowed in the zoning district in exchange for amenities and features provided by the developer;

(d) Removal or easing of approval standards or procedures;

(e) Minimum density ranges;

(f) Redevelopment and infill strategies;

(g) Authorization of housing types not previously allowed by the plan or regulations;

(h) Adoption of an average residential density standard; and

(i) Rezoning or redesignation of nonresidential land.

(10)(a) The provisions of this subsection apply to local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of less than 25,000.

(b) [*At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan that requires the application of a statewide planning goal relating to buildable lands for residential use,*] **As required under paragraph (c) of this subsection,** a city shall, according to rules of the commission:

(A) Determine the estimated housing needs within the jurisdiction for the next 20 years;

(B) Inventory the supply of buildable lands available within the urban growth boundary to accommodate the estimated housing needs determined under this subsection; and

(C) Adopt measures necessary to accommodate the estimated housing needs determined under this subsection.

(c) The actions required under paragraph (b) of this subsection shall be undertaken:

(A) At periodic review pursuant to ORS 197.628 to 197.651;

(B) On a schedule established by the commission for cities with a population greater than 10,000, not to exceed once each eight years; or

(C) At any other legislative review of the comprehensive plan that requires the application of a statewide planning goal relating to buildable lands for residential use.

[*(c)*] **(d)** For the purpose of the inventory described in this subsection, "buildable lands" includes those lands described in subsection (4)(a) of this section.

SECTION 8a. If House Bill 2001 becomes law, section 8 of this 2019 Act (amending ORS 197.296) is repealed and ORS 197.296, as amended by section 5, chapter _______, Oregon Laws 2019 (Enrolled House Bill 2001), is amended to read:

197.296. (1)(a) The provisions of subsections (2) to (9) of this section apply to metropolitan service district regional framework plans and local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of 25,000 or more.

(b) The Land Conservation and Development Commission may establish a set of factors under which additional cities are subject to the provisions of this section. In establishing the set of factors required under this paragraph, the commission shall consider the size of the city, the rate of population growth of the city or the proximity of the city to another city with a population of 25,000 or more or to a metropolitan service district.

(2)**(a)** [*At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan or regional framework plan that concerns the urban growth boundary and requires the application of a statewide planning goal relating to buildable lands for residential use,*] A local government shall demonstrate that its comprehensive plan or regional framework plan provides sufficient buildable lands within the urban growth boundary established pursuant to statewide planning goals to accommodate estimated housing needs for 20 years**:**

(A) At periodic review under ORS 197.628 to 197.651;

(B) As scheduled by the commission:

(i) At least once each eight years for local governments that are not within a metropolitan service district; or

(ii) At least once each six years for a metropolitan service district; or

(C) At any other legislative review of the comprehensive plan or regional framework plan that concerns the urban growth boundary and requires the application of a statewide planning goal relating to buildable lands for residential use.

(b) The 20-year period shall commence on the date initially scheduled for completion of the [*periodic or legislative*] review **under paragraph (a) of this subsection**.

(3) In performing the duties under subsection (2) of this section, a local government shall:

(a) Inventory the supply of buildable lands within the urban growth boundary and determine the housing capacity of the buildable lands; and

(b) Conduct an analysis of existing and projected housing need by type and density range, in accordance with all factors under ORS 197.303 and statewide planning goals and rules relating to housing, to determine the number of units and amount of land needed for each needed housing type for the next 20 years.

(4)(a) For the purpose of the inventory described in subsection (3)(a) of this section, "buildable lands" includes:

(A) Vacant lands planned or zoned for residential use;

(B) Partially vacant lands planned or zoned for residential use;

(C) Lands that may be used for a mix of residential and employment uses under the existing planning or zoning; and

(D) Lands that may be used for residential infill or redevelopment.

(b) For the purpose of the inventory and determination of housing capacity described in subsection (3)(a) of this section, the local government must demonstrate consideration of:

(A) The extent that residential development is prohibited or restricted by local regulation and ordinance, state law and rule or federal statute and regulation;

(B) A written long term contract or easement for radio, telecommunications or electrical facilities, if the written contract or easement is provided to the local government; and

(C) The presence of a single family dwelling or other structure on a lot or parcel.

(c) Except for land that may be used for residential infill or redevelopment, a local government shall create a map or document that may be used to verify and identify specific lots or parcels that have been determined to be buildable lands.

(5)(a) Except as provided in paragraphs (b) and (c) of this subsection, the determination of housing capacity pursuant to subsection (3)(a) of this section must be based on data relating to land within the urban growth boundary that has been collected since the last review [*or six years, whichever is greater*] **under subsection (2)(a)(B) of this section**. The data shall include:

(A) The number, density and average mix of housing types of urban residential development that have actually occurred;

(B) Trends in density and average mix of housing types of urban residential development;

(C) Market factors that may substantially impact future urban residential development; and

(D) The number, density and average mix of housing types that have occurred on the buildable lands described in subsection (4)(a) of this section.

(b) A local government shall make the determination described in paragraph (a) of this subsection using a shorter time period than the time period described in paragraph (a) of this subsection if the local government finds that the shorter time period will provide more accurate and reliable data related to housing capacity. The shorter time period may not be less than three years.

(c) A local government shall use data from a wider geographic area or use a time period longer than the time period described in paragraph (a) of this subsection if the analysis of a wider geographic area or the use of a longer time period will provide more accurate, complete and reliable data relating to trends affecting housing need than an analysis performed pursuant to paragraph (a) of this subsection. The local government must clearly describe the geographic area, time frame and source of data used in a determination performed under this paragraph.

(6) If the housing need determined pursuant to subsection (3)(b) of this section is greater than the housing capacity determined pursuant to subsection (3)(a) of this section, the local government shall take one or both of the following actions to accommodate the additional housing need:

(a) Amend its urban growth boundary to include sufficient buildable lands to accommodate housing needs for the next 20 years. As part of this process, the local government shall consider the effects of measures taken pursuant to paragraph (b) of this subsection. The amendment shall include sufficient land reasonably necessary to accommodate the siting of new public school facilities. The need and inclusion of lands for new public school facilities shall be a coordinated process between the affected public school districts and the local government that has the authority to approve the urban growth boundary.

(b) Amend its comprehensive plan, regional framework plan, functional plan or land use regulations to include new measures that demonstrably increase the likelihood that residential development will occur at densities sufficient to accommodate housing needs for the next 20 years without expansion of the urban growth boundary. A local government or metropolitan service district that takes this action shall adopt findings regarding the density expectations assumed to result from measures adopted under this paragraph based upon the factors listed in ORS 197.303 (2) and data in subsection (5)(a) of this section. The density expectations may not project an increase in residential capacity above achieved density by more than three percent without quantifiable validation of such departures. For a local government located outside of a metropolitan service district, a quantifiable validation must demonstrate that the assumed housing capacity has been achieved in areas that are zoned to allow no greater than the same authorized density level within the local jurisdiction or a jurisdiction in the same region. For a metropolitan service district, a quantifiable validation must demonstrate that the assumed housing capacity has been achieved in areas that are zoned to allow no greater than the same authorized density level within the metropolitan service district.

(c) As used in this subsection, "authorized density level" has the meaning given that term in ORS 227.175.

(7) Using the housing need analysis conducted under subsection (3)(b) of this section, the local government shall determine the overall average density and overall mix of housing types at which residential development of needed housing types must occur in order to meet housing needs over the next 20 years. If that density is greater than the actual density of development determined under subsection (5)(a)(A) of this section, or if that mix is different from the actual mix of housing types determined under subsection (5)(a)(A) of this section, the local government, as part of its periodic review, shall adopt measures that demonstrably increase the likelihood that residential development will occur at the housing types and density and at the mix of housing types required to meet housing needs over the next 20 years.

(8)(a) A local government outside a metropolitan service district that takes any actions under subsection (6) or (7) of this section shall demonstrate that the comprehensive plan and land use regulations comply with goals and rules adopted by the commission and implement ORS 197.295 to 197.314.

(b) A local government shall determine the density and mix of housing types anticipated as a result of actions taken under subsections (6) and (7) of this section and monitor and record the actual density and mix of housing types achieved following the adoption of these actions. The local government shall compare actual and anticipated density and mix. The local government shall submit its comparison to the commission at the next [*periodic review or at the next legislative*] review of its urban growth boundary[*, whichever comes first*] **under subsection (2)(a) of this section**.

(9) In establishing that actions and measures adopted under subsections (6) and (7) of this section demonstrably increase the likelihood of higher density residential development, the local government shall at a minimum ensure that land zoned for needed housing is in locations appropriate for the housing types identified under subsection (3) of this section, is zoned at density ranges that are likely to be achieved by the housing market using the analysis in subsection (3) of this section and is in areas where sufficient urban services are planned to enable the higher density development to occur over the 20-year period. Actions or measures, or both, may include but are not limited to:

(a) Increases in the permitted density on existing residential land;

(b) Financial incentives for higher density housing;

(c) Provisions permitting additional density beyond that generally allowed in the zoning district in exchange for amenities and features provided by the developer;

(d) Removal or easing of approval standards or procedures;

(e) Minimum density ranges;

(f) Redevelopment and infill strategies;

(g) Authorization of housing types not previously allowed by the plan or regulations;

(h) Adoption of an average residential density standard; and

(i) Rezoning or redesignation of nonresidential land.

(10)(a) The provisions of this subsection apply to local government comprehensive plans for lands within the urban growth boundary of a city that is located outside of a metropolitan service district and has a population of less than 25,000.

(b) [*At periodic review pursuant to ORS 197.628 to 197.651 or at any other legislative review of the comprehensive plan that requires the application of a statewide planning goal relating to buildable lands for residential use,*] **As required under paragraph (c) of this subsection,** a city shall, according to rules of the commission:

(A) Determine the estimated housing needs within the jurisdiction for the next 20 years;

(B) Inventory the supply of buildable lands available within the urban growth boundary to accommodate the estimated housing needs determined under this subsection; and

(C) Adopt measures necessary to accommodate the estimated housing needs determined under this subsection.

(c) The actions required under paragraph (b) of this subsection shall be undertaken:

(A) At periodic review pursuant to ORS 197.628 to 197.651;

(B) On a schedule established by the commission for cities with a population greater than 10,000, not to exceed once each eight years; or

(C) At any other legislative review of the comprehensive plan that requires the application of a statewide planning goal relating to buildable lands for residential use.

[*(c)*] **(d)** For the purpose of the inventory described in this subsection, "buildable lands" includes those lands described in subsection (4)(a) of this section.

SECTION 9. ORS 197.299 is amended to read:

197.299. (1) A metropolitan service district organized under ORS chapter 268 shall complete the inventory, determination and analysis required under ORS 197.296 (3) not later than six years after completion of the previous inventory, determination and analysis.

(2)(a) The metropolitan service district shall take such action as necessary under ORS 197.296 (6)(a) to accommodate one-half of a 20-year buildable land supply determined under ORS 197.296 (3) within one year of completing the analysis.

(b) The metropolitan service district shall take all final action under ORS 197.296 (6)(a) necessary to accommodate a 20-year buildable land supply determined under ORS 197.296 (3) within two years of completing the analysis.

(c) The metropolitan service district shall take action under ORS 197.296 (6)(b), within one year after the analysis required under ORS 197.296 (3)(b) is completed, to provide sufficient buildable land within the urban growth boundary to accommodate the estimated housing needs for 20 years from the time the actions are completed.

(d) The metropolitan service district shall consider and adopt new measures that the governing body deems appropriate under ORS 197.296 (6)(b) **and shall allocate any housing capacity that is not accommodated under this section to be accommodated by the application of ORS 197.296 (6)(b) by cities within the metropolitan service district with a population greater than 10,000**.

(e) Cities to which housing capacity is allocated under paragraph (d) of this subsection shall take steps, at least once every six years as scheduled by the Land Conservation and Development Commission, to demonstrably increase the likelihood that residential development will occur at densities sufficient to accommodate housing needs for the next 20 years as required by ORS 197.296 (6)(b).

(3) The [*Land Conservation and Development*] commission may grant an extension to the time limits of subsection (2) of this section if the Director of the Department of Land Conservation and Development determines that the metropolitan service district has provided good cause for failing to meet the time limits.

(4)(a) The metropolitan service district shall establish a process to expand the urban growth boundary to accommodate a need for land for a public school that cannot reasonably be accommodated within the existing urban growth boundary. The metropolitan service district shall design the process to:

(A) Accommodate a need that must be accommodated between periodic analyses of urban growth boundary capacity required by subsection (1) of this section; and

(B) Provide for a final decision on a proposal to expand the urban growth boundary within four months after submission of a complete application by a large school district as defined in ORS 195.110.

(b) At the request of a large school district, the metropolitan service district shall assist the large school district to identify school sites required by the school facility planning process described in ORS 195.110. A need for a public school is a specific type of identified land need under ORS 197.298 (3).

(5) Three years after completing its most recent demonstration of sufficient buildable lands under ORS 197.296, a metropolitan service district may, on a single occasion, revise the determination

and analysis required as part of the demonstration for the purpose of considering an amendment to the metropolitan service district's urban growth boundary, provided:

(a) The metropolitan service district has entered into an intergovernmental agreement and has designated rural reserves and urban reserves under ORS 195.141 and 195.145 with each county located within the district;

(b) The commission has acknowledged the rural reserve and urban reserve designations described in paragraph (a) of this subsection;

(c) One or more cities within the metropolitan service district have proposed a development that would require expansion of the urban growth boundary;

(d) The city or cities proposing the development have provided evidence to the metropolitan service district that the proposed development would provide additional needed housing to the needed housing included in the most recent determination and analysis;

(e) The location chosen for the proposed development is adjacent to the city proposing the development; and

(f) The location chosen for the proposed development is located within an area designated and acknowledged as an urban reserve.

(6)(a) If a metropolitan service district, after revising its most recent determination and analysis pursuant to subsection (5) of this section, concludes that an expansion of its urban growth boundary is warranted, the metropolitan service district may take action to expand its urban growth boundary in one or more locations to accommodate the proposed development, provided the urban growth boundary expansion does not exceed a total of 1,000 acres.

(b) A metropolitan service district that expands its urban growth boundary under this subsection:

(A) Must adopt the urban growth boundary expansion not more than four years after completing its most recent demonstration of sufficient buildable lands under ORS 197.296; and

(B) Is exempt from the boundary location requirements described in the statewide land use planning goals relating to urbanization.

SECTION 10. ORS 197.303 is amended to read:

197.303. (1) As used in ORS [*197.307*] **197.295 to 197.314**, "needed housing" means all housing on land zoned for residential use or mixed residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes, as those terms are defined by the United States Department of Housing and Urban Development under 42 U.S.C. 1437a. "Needed housing" includes the following housing types:

(a) Attached and detached single-family housing and multiple family housing for both owner and renter occupancy;

(b) Government assisted housing;

(c) Mobile home or manufactured dwelling parks as provided in ORS 197.475 to 197.490;

(d) Manufactured homes on individual lots planned and zoned for single-family residential use that are in addition to lots within designated manufactured dwelling subdivisions; and

(e) Housing for farmworkers.

(2) Subsection (1)(a) and (d) of this section does not apply to:

(a) A city with a population of less than 2,500.

(b) A county with a population of less than 15,000.

(3) A local government may take an exception under ORS 197.732 to the definition of "needed housing" in subsection (1) of this section in the same manner that an exception may be taken under the goals.

SECTION 10a. If House Bill 2001 becomes law, section 10 of this 2019 Act (amending ORS 197.303) is repealed and ORS 197.303, as amended by section 6, chapter ______, Oregon Laws 2019 (Enrolled House Bill 2001), is amended to read:

197.303. (1) As used in ORS 197.295 to 197.314, "needed housing" means all housing on land zoned for residential use or mixed residential and commercial use that is determined to meet the need shown for housing within an urban growth boundary at price ranges and rent levels that are affordable to households within the county with a variety of incomes, including but not limited to households with low incomes, very low incomes and extremely low incomes, as those terms are defined by the United States Department of Housing and Urban Development under 42 U.S.C. 1437a. "Needed housing" includes the following housing types:

(a) Attached and detached single-family housing and multiple family housing for both owner and renter occupancy;

(b) Government assisted housing;

(c) Mobile home or manufactured dwelling parks as provided in ORS 197.475 to 197.490;

(d) Manufactured homes on individual lots planned and zoned for single-family residential use that are in addition to lots within designated manufactured dwelling subdivisions; and

(e) Housing for farmworkers.

(2) For the purpose of estimating housing needs, as described in ORS 197.296 (3)(b), a local government shall use the population projections prescribed by ORS 195.033 or 195.036 and shall consider and adopt findings related to changes in each of the following factors since the last [*periodic or legislative review or six years, whichever is greater,*] **review under ORS 197.296 (2)(a)(B)** and the projected future changes in these factors over a 20-year planning period:

(a) Household sizes;

(b) Household demographics [*in terms of age, gender, race or other established demographic category*];

(c) Household incomes;

(d) Vacancy rates; and

(e) Housing costs.

(3) A local government shall make the estimate described in subsection (2) of this section using a shorter time period than since the last [*periodic or legislative review or six years, whichever is greater,*] **review under ORS 197.296 (2)(a)(B)** if the local government finds that the shorter time period will provide more accurate and reliable data related to housing need. The shorter time period may not be less than three years.

(4) A local government shall use data from a wider geographic area or use a time period longer than the time period described in subsection (2) of this section if the analysis of a wider geographic area or the use of a longer time period will provide more accurate, complete and reliable data relating to trends affecting housing need than an analysis performed pursuant to subsection (2) of this section. The local government must clearly describe the geographic area, time frame and source of data used in an estimate performed under this subsection.

(5) Subsection (1)(a) and (d) of this section does not apply to:

(a) A city with a population of less than 2,500.

(b) A county with a population of less than 15,000.

(6) A local government may take an exception under ORS 197.732 to the definition of "needed housing" in subsection (1) of this section in the same manner that an exception may be taken under the goals.

SECTION 11. ORS 197.319 is amended to read:

197.319. (1) Before a person may request adoption of an enforcement order under ORS 197.320, the person shall:

(a) Present the reasons, in writing, for such an order to the affected local government; and

(b) Request:

(A) Revisions to the local comprehensive plan, land use regulations, special district cooperative or urban service agreement or decision-making process which is the basis for the order; or

(B) That an action be taken regarding the local comprehensive plan, land use regulations, special district agreement**, housing production strategy** or decision-making process that is the basis for the order.

(2)(a) The local government or special district shall issue a written response to the request within 60 days of the date the request is mailed to the local government or special district.

(b) The requestor and the local government or special district may enter into mediation to resolve issues in the request. The Department of Land Conservation and Development shall provide mediation services when jointly requested by the local government or special district and the requestor.

(c) If the local government or special district does not act in a manner which the requestor believes is adequate to address the issues raised in the request within the time period provided in paragraph (a) of this subsection, a petition may be presented to the Land Conservation and Development Commission under ORS 197.324.

(3) A metropolitan service district may request an enforcement order under ORS 197.320 (12) without first complying with subsections (1) and (2) of this section.

SECTION 12. ORS 197.320 is amended to read:

197.320. The Land Conservation and Development Commission shall issue an order requiring a local government, state agency or special district to take action necessary to bring its comprehensive plan, land use regulation, limited land use decisions or other land use decisions **or actions** into compliance with the goals, acknowledged comprehensive plan provisions**,** [*or*] land use regulations **or housing production strategy** if the commission has good cause to believe:

(1) A comprehensive plan or land use regulation adopted by a local government not on a compliance schedule is not in compliance with the goals by the date set in ORS 197.245 or 197.250 for such compliance;

(2) A plan, program, rule or regulation affecting land use adopted by a state agency or special district is not in compliance with the goals by the date set in ORS 197.245 or 197.250 for such compliance;

(3) A local government is not making satisfactory progress toward performance of its compliance schedule;

(4) A state agency is not making satisfactory progress in carrying out its coordination agreement or the requirements of ORS 197.180;

(5) A local government has no comprehensive plan or land use regulation and is not on a compliance schedule directed to developing the plan or regulation;

(6) A local government has engaged in a pattern or practice of decision making that violates an acknowledged comprehensive plan or land use regulation. In making its determination under this subsection, the commission shall determine whether there is evidence in the record to support the decisions made. The commission shall not judge the issue solely upon adequacy of the findings in support of the decisions;

(7) A local government has failed to comply with a commission order entered under ORS 197.644;

(8) A special district has engaged in a pattern or practice of decision-making that violates an acknowledged comprehensive plan or cooperative agreement adopted pursuant to ORS 197.020;

(9) A special district is not making satisfactory progress toward performance of its obligations under ORS chapters 195 and 197;

(10) A local government's approval standards, special conditions on approval of specific development proposals or procedures for approval do not comply with ORS 197.307 (4) or (6);

(11) A local government is not making satisfactory progress toward meeting its obligations under ORS 195.065; [*or*]

(12) A local government within the jurisdiction of a metropolitan service district has failed to make changes to the comprehensive plan or land use regulations to comply with the regional framework plan of the district or has engaged in a pattern or practice of decision-making that violates a requirement of the regional framework plan[*.*]**; or**

(13) A city is not making satisfactory progress in taking actions listed in its housing production strategy under section 4 of this 2019 Act.

SECTION 13. Section 1, chapter 47, Oregon Laws 2018, is amended to read:

Sec. 1. (1) For purposes of this section:

(a) A household is severely rent burdened if the household spends more than 50 percent of the income of the household on gross rent for housing.

(b) A regulated affordable unit is a residential unit subject to a regulatory agreement that runs with the land and that requires affordability for an established income level for a defined period of time.

(c) A single-family unit may be rented or owned by a household and includes single-family homes, duplexes, townhomes, row homes and mobile homes.

(2)(a) The Housing and Community Services Department shall annually provide to the governing body of each city in this state with a population greater than 10,000 the most current data available from the United States Census Bureau, or any other source the department considers at least as reliable, showing the percentage of renter households in the city that are severely rent burdened.

(b) [*The Housing and Community Services Department, in collaboration with*] The Department of Land Conservation and Development, **in consultation with the Housing and Community Services Department,** shall develop a survey form on which the governing body of a city may provide specific information related to the affordability of housing within the city, including[*, but not limited to:*]

[*(A)*] the actions relating to land use and other related matters that the [*governing body*] **city** has taken to **encourage the development of needed housing,** increase the affordability of housing and reduce rent burdens for severely rent burdened households[*; and*]**.**

[*(B) The additional actions the governing body intends to take to reduce rent burdens for severely rent burdened households.*]

(c) [*If the Housing and Community Services Department determines that at least 25 percent of the renter households in a city are severely rent burdened,*] The Department **of Land Conservation and Development** shall provide the governing body of the city with the survey form developed pursuant to paragraph (b) of this subsection.

(d) The governing body of the city shall return the completed survey form to the [*Housing and Community Services Department and the*] Department of Land Conservation and Development [*within 60 days of receipt*] **at least 24 months prior to a deadline for completing a housing production strategy under section 4 of this 2019 Act**.

(3)(a) In any year in which the governing body of a city is informed under this section that at least 25 percent of the renter households in the city are severely rent burdened, the governing body shall hold at least one public meeting to discuss the causes and consequences of severe rent burdens within the city, the barriers to reducing rent burdens and possible solutions.

(b) The Housing and Community Services Department may adopt rules governing the conduct of the public meeting required under this subsection.

(4) No later than February 1 of each year, the governing body of each city in this state with a population greater than 10,000 shall submit to the Department of Land Conservation and Development a report for the immediately preceding calendar year setting forth separately for each of the following categories the total number of units that were permitted and the total number that were produced:

(a) Residential units.

(b) Regulated affordable residential units.

(c) Multifamily residential units.

(d) Regulated affordable multifamily residential units.

(e) Single-family units.

(f) Regulated affordable single-family units.

<u>SECTION 14.</u> Section 15 of this 2019 Act is added to and made a part of ORS chapter 197.

<u>SECTION 15.</u> (1) As used in this section, "public property" means all real property of the state, counties, cities, incorporated towns or villages, school districts, irrigation districts, drainage districts, ports, water districts, service districts, metropolitan service districts, housing authorities, public universities listed in ORS 352.002 or all other public or municipal corporations in this state.

(2) Notwithstanding any land use regulation, comprehensive plan, or statewide land use planning goal, a local government may allow the development of housing on public property provided:

(a) The real property is not inventoried as a park or open space as a protective measure pursuant to a statewide land use planning goal;

(b) The real property is located within the urban growth boundary;

(c) The real property is zoned for residential development or adjacent to parcels zoned for residential development;

(d) The housing complies with applicable land use regulations and meets the standards and criteria for residential development for the underlying zone of the land or the adjacent residential land described in paragraph (c) of this subsection;

(e) At least 50 percent of the residential units provided under this section is affordable to households with incomes equal to or less than 60 percent of the area median income, as defined in ORS 456.270; and

(f) The affordability of the residential units described in paragraph (e) of this subsection is subject to an affordable housing covenant, as described in ORS 456.270 to 456.295, held by the local government or the Housing and Community Services Department and with a duration of no less than 60 years.

(3) Notwithstanding any statewide land use planning goal, a local government may amend its comprehensive plan and land use regulations to allow public property to be used for the purposes described in subsection (2) of this section.

SECTION 16. Notwithstanding ORS 197.646, a local government required to comply with the amendments to ORS 197.312 by section 6, chapter 745, Oregon Laws 2017, shall adopt land use regulations, or adopt amendments to its comprehensive plan, to comply with the amendments to ORS 197.312 by section 6, chapter 745, Oregon Laws 2017, no later than the effective date of this 2019 Act.

SECTION 17. ORS 215.416 is amended to read:

215.416. (1) When required or authorized by the ordinances, rules and regulations of a county, an owner of land may apply in writing to such persons as the governing body designates, for a permit, in the manner prescribed by the governing body. The governing body shall establish fees charged for processing permits at an amount no more than the actual or average cost of providing that service.

(2) The governing body shall establish a consolidated procedure by which an applicant may apply at one time for all permits or zone changes needed for a development project. The consolidated procedure shall be subject to the time limitations set out in ORS 215.427. The consolidated procedure shall be available for use at the option of the applicant no later than the time of the first periodic review of the comprehensive plan and land use regulations.

(3) Except as provided in subsection (11) of this section, the hearings officer shall hold at least one public hearing on the application.

(4)(a) A county may not approve an application if the proposed use of land is found to be in conflict with the comprehensive plan of the county and other applicable land use regulation or ordinance provisions. The approval may include such conditions as are authorized by statute or county legislation.

(b)(A) A county may not deny an application for a housing development located within the urban growth boundary if the development complies with clear and objective standards, including but not limited to clear and objective design standards contained in the county comprehensive plan or land use regulations.

(B) This paragraph does not apply to:

(i) Applications or permits for residential development in areas described in ORS 197.307 (5); or

(ii) Applications or permits reviewed under an alternative approval process adopted under ORS 197.307 (6).

(c) A county may not [*reduce the density of*] **condition** an application for a housing development **on a reduction in density** if:

(A) The density applied for is at or below the authorized density level under the local land use regulations; and

(B) At least 75 percent of the floor area applied for is reserved for housing.

(d) A county may not [*reduce the height of*] **condition** an application for a housing development **on a reduction in height** if:

(A) The height applied for is at or below the authorized height level under the local land use regulations;

(B) At least 75 percent of the floor area applied for is reserved for housing; and

(C) Reducing the height has the effect of reducing the authorized density level under local land use regulations.

(e) Notwithstanding paragraphs (c) and (d) of this subsection, a county may [*reduce the density or height of*] **condition** an application for a housing development **on a reduction in density or height only** if the reduction is necessary to resolve a health, safety or habitability issue or to comply with a protective measure adopted pursuant to a statewide land use planning goal. **Notwithstanding ORS 197.350, the county must adopt findings supported by substantial evidence demonstrating the necessity of the reduction.**

(f) As used in this subsection:

(A) "Authorized density level" means the maximum number of lots or dwelling units or the maximum floor area ratio that is permitted under local land use regulations.

(B) "Authorized height level" means the maximum height of a structure that is permitted under local land use regulations.

(C) "Habitability" means being in compliance with the applicable provisions of the state building code under ORS chapter 455 and the rules adopted thereunder.

(5) Hearings under this section shall be held only after notice to the applicant and also notice to other persons as otherwise provided by law and shall otherwise be conducted in conformance with the provisions of ORS 197.763.

(6) Notice of a public hearing on an application submitted under this section shall be provided to the owner of an airport defined by the Oregon Department of Aviation as a "public use airport" if:

(a) The name and address of the airport owner has been provided by the Oregon Department of Aviation to the county planning authority; and

(b) The property subject to the land use hearing is:

(A) Within 5,000 feet of the side or end of a runway of an airport determined by the Oregon Department of Aviation to be a "visual airport"; or

(B) Within 10,000 feet of the side or end of the runway of an airport determined by the Oregon Department of Aviation to be an "instrument airport."

(7) Notwithstanding the provisions of subsection (6) of this section, notice of a land use hearing need not be provided as set forth in subsection (6) of this section if the zoning permit would only allow a structure less than 35 feet in height and the property is located outside the runway "approach surface" as defined by the Oregon Department of Aviation.

(8)(a) Approval or denial of a permit application shall be based on standards and criteria which shall be set forth in the zoning ordinance or other appropriate ordinance or regulation of the county and which shall relate approval or denial of a permit application to the zoning ordinance and comprehensive plan for the area in which the proposed use of land would occur and to the zoning ordinance and comprehensive plan for the county as a whole.

(b) When an ordinance establishing approval standards is required under ORS 197.307 to provide only clear and objective standards, the standards must be clear and objective on the face of the ordinance.

(9) Approval or denial of a permit or expedited land division shall be based upon and accompanied by a brief statement that explains the criteria and standards considered relevant to the deci-

sion, states the facts relied upon in rendering the decision and explains the justification for the decision based on the criteria, standards and facts set forth.

(10) Written notice of the approval or denial shall be given to all parties to the proceeding.

(11)(a)(A) The hearings officer or such other person as the governing body designates may approve or deny an application for a permit without a hearing if the hearings officer or other designated person gives notice of the decision and provides an opportunity for any person who is adversely affected or aggrieved, or who is entitled to notice under paragraph (c) of this subsection, to file an appeal.

(B) Written notice of the decision shall be mailed to those persons described in paragraph (c) of this subsection.

(C) Notice under this subsection shall comply with ORS 197.763 (3)(a), (c), (g) and (h) and shall describe the nature of the decision. In addition, the notice shall state that any person who is adversely affected or aggrieved or who is entitled to written notice under paragraph (c) of this subsection may appeal the decision by filing a written appeal in the manner and within the time period provided in the county's land use regulations. A county may not establish an appeal period that is less than 12 days from the date the written notice of decision required by this subsection was mailed. The notice shall state that the decision will not become final until the period for filing a local appeal has expired. The notice also shall state that a person who is mailed written notice of the decision cannot appeal the decision directly to the Land Use Board of Appeals under ORS 197.830.

(D) An appeal from a hearings officer's decision made without hearing under this subsection shall be to the planning commission or governing body of the county. An appeal from such other person as the governing body designates shall be to a hearings officer, the planning commission or the governing body. In either case, the appeal shall be to a de novo hearing.

(E) The de novo hearing required by subparagraph (D) of this paragraph shall be the initial evidentiary hearing required under ORS 197.763 as the basis for an appeal to the Land Use Board of Appeals. At the de novo hearing:

(i) The applicant and other parties shall have the same opportunity to present testimony, arguments and evidence as they would have had in a hearing under subsection (3) of this section before the decision;

(ii) The presentation of testimony, arguments and evidence shall not be limited to issues raised in a notice of appeal; and

(iii) The decision maker shall consider all relevant testimony, arguments and evidence that are accepted at the hearing.

(b) If a local government provides only a notice of the opportunity to request a hearing, the local government may charge a fee for the initial hearing. The maximum fee for an initial hearing shall be the cost to the local government of preparing for and conducting the appeal, or $250, whichever is less. If an appellant prevails at the hearing or upon subsequent appeal, the fee for the initial hearing shall be refunded. The fee allowed in this paragraph shall not apply to appeals made by neighborhood or community organizations recognized by the governing body and whose boundaries include the site.

(c)(A) Notice of a decision under paragraph (a) of this subsection shall be provided to the applicant and to the owners of record of property on the most recent property tax assessment roll where such property is located:

(i) Within 100 feet of the property that is the subject of the notice when the subject property is wholly or in part within an urban growth boundary;

(ii) Within 250 feet of the property that is the subject of the notice when the subject property is outside an urban growth boundary and not within a farm or forest zone; or

(iii) Within 750 feet of the property that is the subject of the notice when the subject property is within a farm or forest zone.

(B) Notice shall also be provided to any neighborhood or community organization recognized by the governing body and whose boundaries include the site.

(C) At the discretion of the applicant, the local government also shall provide notice to the Department of Land Conservation and Development.

(12) A decision described in ORS 215.402 (4)(b) shall:

(a) Be entered in a registry available to the public setting forth:

(A) The street address or other easily understood geographic reference to the subject property;

(B) The date of the decision; and

(C) A description of the decision made.

(b) Be subject to the jurisdiction of the Land Use Board of Appeals in the same manner as a limited land use decision.

(c) Be subject to the appeal period described in ORS 197.830 (5)(b).

(13) At the option of the applicant, the local government shall provide notice of the decision described in ORS 215.402 (4)(b) in the manner required by ORS 197.763 (2), in which case an appeal to the board shall be filed within 21 days of the decision. The notice shall include an explanation of appeal rights.

(14) Notwithstanding the requirements of this section, a limited land use decision shall be subject to the requirements set forth in ORS 197.195 and 197.828.

SECTION 18. ORS 227.175 is amended to read:

227.175. (1) When required or authorized by a city, an owner of land may apply in writing to the hearings officer, or such other person as the city council designates, for a permit or zone change, upon such forms and in such a manner as the city council prescribes. The governing body shall establish fees charged for processing permits at an amount no more than the actual or average cost of providing that service.

(2) The governing body of the city shall establish a consolidated procedure by which an applicant may apply at one time for all permits or zone changes needed for a development project. The consolidated procedure shall be subject to the time limitations set out in ORS 227.178. The consolidated procedure shall be available for use at the option of the applicant no later than the time of the first periodic review of the comprehensive plan and land use regulations.

(3) Except as provided in subsection (10) of this section, the hearings officer shall hold at least one public hearing on the application.

(4)(a) A city may not approve an application unless the proposed development of land would be in compliance with the comprehensive plan for the city and other applicable land use regulation or ordinance provisions. The approval may include such conditions as are authorized by ORS 227.215 or any city legislation.

(b)(A) A city may not deny an application for a housing development located within the urban growth boundary if the development complies with clear and objective standards, including [*but not limited to*] clear and objective design standards contained in the city comprehensive plan or land use regulations.

(B) This paragraph does not apply to:

(i) Applications or permits for residential development in areas described in ORS 197.307 (5); or

(ii) Applications or permits reviewed under an alternative approval process adopted under ORS 197.307 (6).

(c) A city may not [*reduce the density of*] **condition** an application for a housing development **on a reduction in density** if:

(A) The density applied for is at or below the authorized density level under the local land use regulations; and

(B) At least 75 percent of the floor area applied for is reserved for housing.

(d) A city may not [*reduce the height of*] **condition** an application for a housing development **on a reduction in height** if:

(A) The height applied for is at or below the authorized height level under the local land use regulations;

(B) At least 75 percent of the floor area applied for is reserved for housing; and

(C) Reducing the height has the effect of reducing the authorized density level under local land use regulations.

(e) Notwithstanding paragraphs (c) and (d) of this subsection, a city may [*reduce the density or height of*] **condition** an application for a housing development **on a reduction in density or height only** if the reduction is necessary to resolve a health, safety or habitability issue or to comply with a protective measure adopted pursuant to a statewide land use planning goal. **Notwithstanding ORS 197.350, the city must adopt findings supported by substantial evidence demonstrating the necessity of the reduction.**

(f) As used in this subsection:

(A) "Authorized density level" means the maximum number of lots or dwelling units or the maximum floor area ratio that is permitted under local land use regulations.

(B) "Authorized height level" means the maximum height of a structure that is permitted under local land use regulations.

(C) "Habitability" means being in compliance with the applicable provisions of the state building code under ORS chapter 455 and the rules adopted thereunder.

(5) Hearings under this section may be held only after notice to the applicant and other interested persons and shall otherwise be conducted in conformance with the provisions of ORS 197.763.

(6) Notice of a public hearing on a zone use application shall be provided to the owner of an airport, defined by the Oregon Department of Aviation as a "public use airport" if:

(a) The name and address of the airport owner has been provided by the Oregon Department of Aviation to the city planning authority; and

(b) The property subject to the zone use hearing is:

(A) Within 5,000 feet of the side or end of a runway of an airport determined by the Oregon Department of Aviation to be a "visual airport"; or

(B) Within 10,000 feet of the side or end of the runway of an airport determined by the Oregon Department of Aviation to be an "instrument airport."

(7) Notwithstanding the provisions of subsection (6) of this section, notice of a zone use hearing need only be provided as set forth in subsection (6) of this section if the permit or zone change would only allow a structure less than 35 feet in height and the property is located outside of the runway "approach surface" as defined by the Oregon Department of Aviation.

(8) If an application would change the zone of property that includes all or part of a mobile home or manufactured dwelling park as defined in ORS 446.003, the governing body shall give written notice by first class mail to each existing mailing address for tenants of the mobile home or manufactured dwelling park at least 20 days but not more than 40 days before the date of the first hearing on the application. The governing body may require an applicant for such a zone change to pay the costs of such notice.

(9) The failure of a tenant or an airport owner to receive a notice which was mailed shall not invalidate any zone change.

(10)(a)(A) The hearings officer or such other person as the governing body designates may approve or deny an application for a permit without a hearing if the hearings officer or other designated person gives notice of the decision and provides an opportunity for any person who is adversely affected or aggrieved, or who is entitled to notice under paragraph (c) of this subsection, to file an appeal.

(B) Written notice of the decision shall be mailed to those persons described in paragraph (c) of this subsection.

(C) Notice under this subsection shall comply with ORS 197.763 (3)(a), (c), (g) and (h) and shall describe the nature of the decision. In addition, the notice shall state that any person who is adversely affected or aggrieved or who is entitled to written notice under paragraph (c) of this subsection may appeal the decision by filing a written appeal in the manner and within the time period provided in the city's land use regulations. A city may not establish an appeal period that is less than 12 days from the date the written notice of decision required by this subsection was mailed. The notice shall state that the decision will not become final until the period for filing a local appeal has expired. The notice also shall state that a person who is mailed written notice of the decision cannot appeal the decision directly to the Land Use Board of Appeals under ORS 197.830.

(D) An appeal from a hearings officer's decision made without hearing under this subsection shall be to the planning commission or governing body of the city. An appeal from such other person as the governing body designates shall be to a hearings officer, the planning commission or the governing body. In either case, the appeal shall be to a de novo hearing.

(E) The de novo hearing required by subparagraph (D) of this paragraph shall be the initial evidentiary hearing required under ORS 197.763 as the basis for an appeal to the Land Use Board of Appeals. At the de novo hearing:

(i) The applicant and other parties shall have the same opportunity to present testimony, arguments and evidence as they would have had in a hearing under subsection (3) of this section before the decision;

(ii) The presentation of testimony, arguments and evidence shall not be limited to issues raised in a notice of appeal; and

(iii) The decision maker shall consider all relevant testimony, arguments and evidence that are accepted at the hearing.

(b) If a local government provides only a notice of the opportunity to request a hearing, the local government may charge a fee for the initial hearing. The maximum fee for an initial hearing shall be the cost to the local government of preparing for and conducting the appeal, or $250, whichever is less. If an appellant prevails at the hearing or upon subsequent appeal, the fee for the initial hearing shall be refunded. The fee allowed in this paragraph shall not apply to appeals made by neighborhood or community organizations recognized by the governing body and whose boundaries include the site.

(c)(A) Notice of a decision under paragraph (a) of this subsection shall be provided to the applicant and to the owners of record of property on the most recent property tax assessment roll where such property is located:

(i) Within 100 feet of the property that is the subject of the notice when the subject property is wholly or in part within an urban growth boundary;

(ii) Within 250 feet of the property that is the subject of the notice when the subject property is outside an urban growth boundary and not within a farm or forest zone; or

(iii) Within 750 feet of the property that is the subject of the notice when the subject property is within a farm or forest zone.

(B) Notice shall also be provided to any neighborhood or community organization recognized by the governing body and whose boundaries include the site.

(C) At the discretion of the applicant, the local government also shall provide notice to the Department of Land Conservation and Development.

(11) A decision described in ORS 227.160 (2)(b) shall:

(a) Be entered in a registry available to the public setting forth:

(A) The street address or other easily understood geographic reference to the subject property;

(B) The date of the decision; and

(C) A description of the decision made.

(b) Be subject to the jurisdiction of the Land Use Board of Appeals in the same manner as a limited land use decision.

(c) Be subject to the appeal period described in ORS 197.830 (5)(b).

(12) At the option of the applicant, the local government shall provide notice of the decision described in ORS 227.160 (2)(b) in the manner required by ORS 197.763 (2), in which case an appeal to the board shall be filed within 21 days of the decision. The notice shall include an explanation of appeal rights.

(13) Notwithstanding other requirements of this section, limited land use decisions shall be subject to the requirements set forth in ORS 197.195 and 197.828.

SECTION 19. ORS 215.441 is amended to read:

215.441. (1) If a church, synagogue, temple, mosque, chapel, meeting house or other nonresidential place of worship is allowed on real property under state law and rules and local zoning ordinances and regulations, a county shall allow the reasonable use of the real property for activities customarily associated with the practices of the religious activity, including:

(a) Worship services.

(b) Religion classes.

(c) Weddings.

(d) Funerals.

(e) Meal programs.

(f) Child care, but not including private or parochial school education for prekindergarten through grade 12 or higher education.

(g) Providing housing or space for housing in a building **or buildings** that [*is*] **are** detached from the place of worship, provided:

(A) At least 50 percent of the residential units provided under this paragraph are affordable to households with incomes equal to or less than 60 percent of the median family income for the county in which the real property is located;

(B) The real property is in an area zoned for residential use that is located within the urban growth boundary; and

(C) The housing or space for housing complies with applicable land use regulations and meets the standards and criteria for residential development for the underlying zone.

(2) A county may:

(a) Subject real property described in subsection (1) of this section to reasonable regulations, including site review or design review, concerning the physical characteristics of the uses authorized under subsection (1) of this section; or

(b) Prohibit or restrict the use of real property by a place of worship described in subsection (1) of this section if the county finds that the level of service of public facilities, including transportation, water supply, sewer and storm drain systems is not adequate to serve the place of worship described in subsection (1) of this section.

(3) Notwithstanding any other provision of this section, a county may allow a private or parochial school for prekindergarten through grade 12 or higher education to be sited under applicable state law and rules and local zoning ordinances and regulations.

(4) Housing and space for housing provided under subsection (1)(g) of this section must be subject to a covenant appurtenant that restricts the owner and each successive owner of [*the*] **a** building or any residential unit contained in [*the*] **a** building from selling or renting any residential unit described in subsection (1)(g)(A) of this section as housing that is not affordable to households with incomes equal to or less than 60 percent of the median family income for the county in which the real property is located for a period of 60 years from the date of the certificate of occupancy.

SECTION 20. ORS 227.500 is amended to read:

227.500. (1) If a church, synagogue, temple, mosque, chapel, meeting house or other nonresidential place of worship is allowed on real property under state law and rules and local zoning ordinances and regulations, a city shall allow the reasonable use of the real property for activities customarily associated with the practices of the religious activity, including:

(a) Worship services.

(b) Religion classes.

(c) Weddings.

(d) Funerals.

(e) Meal programs.

(f) Child care, but not including private or parochial school education for prekindergarten through grade 12 or higher education.

(g) Providing housing or space for housing in a building **or buildings** that [*is*] **are** detached from the place of worship, provided:

(A) At least 50 percent of the residential units provided under this paragraph are affordable to households with incomes equal to or less than 60 percent of the median family income for the county in which the real property is located;

(B) The real property is in an area zoned for residential use that is located within the urban growth boundary; and

(C) The housing or space for housing complies with applicable land use regulations and meets the standards and criteria for residential development for the underlying zone.

(2) A city may:

(a) Subject real property described in subsection (1) of this section to reasonable regulations, including site review and design review, concerning the physical characteristics of the uses authorized under subsection (1) of this section; or

(b) Prohibit or regulate the use of real property by a place of worship described in subsection (1) of this section if the city finds that the level of service of public facilities, including transportation, water supply, sewer and storm drain systems is not adequate to serve the place of worship described in subsection (1) of this section.

(3) Notwithstanding any other provision of this section, a city may allow a private or parochial school for prekindergarten through grade 12 or higher education to be sited under applicable state law and rules and local zoning ordinances and regulations.

(4) Housing and space for housing provided under subsection (1)(g) of this section must be subject to a covenant appurtenant that restricts the owner and each successive owner of [*the*] **a** building or any residential unit contained in [*the*] **a** building from selling or renting any residential unit described in subsection (1)(g)(A) of this section as housing that is not affordable to households with incomes equal to or less than 60 percent of the median family income for the county in which the real property is located for a period of 60 years from the date of the certificate of occupancy.

SECTION 21. ORS 455.062 is amended to read:

455.062. (1) A Department of Consumer and Business Services employee acting within the scope of that employment may provide typical plans and specifications:

(a) For structures of a type for which the provision of plans or specifications is exempted under ORS 671.030 from the application of ORS 671.010 to 671.220 and exempted under ORS 672.060 from the application of ORS 672.002 to 672.325; and

(b) Notwithstanding ORS 671.010 to 671.220 and 672.002 to 672.325, for structures that are metal or wood frame Use and Occupancy Classification Group U structures under the structural specialty code.

(2) A Department of Consumer and Business Services employee, who is licensed or registered under ORS 671.010 to 671.220 or 672.002 to 672.325, who is acting within the scope of that employment and who is providing typical plans and specifications under subsection (1) of this section, is not required to seal or sign the typical plans and specifications and is not subject to disciplinary action under ORS 671.010 to 671.220 or 672.002 to 672.325 based on providing those typical plans and specifications.

[*(2)*] **(3)** A building official or inspector, as those terms are defined in ORS 455.715, when acting within the scope of direct employment by a municipality, may provide typical plans and specifications for structures of a type for which the provision of plans or specifications is exempted under ORS 671.030 from the application of ORS 671.010 to 671.220 and exempted under ORS 672.060 from the application of ORS 672.002 to 672.325.

[*(3)*] This [*section*] **subsection** does not alter any applicable requirement under ORS 671.010 to 671.220 or 672.002 to 672.325 regarding stamps and seals for a set of plans for a structure.

SECTION 21a. If Senate Bill 39 becomes law, ORS 455.062, as amended by section 2, chapter 97, Oregon Laws 2019 (Enrolled Senate Bill 39), and section 21 of this 2019 Act, is amended to read:

455.062. (1) A Department of Consumer and Business Services employee acting within the scope of that employment may provide typical drawings and specifications:

(a) For structures of a type for which the provision of drawings or specifications is exempted under ORS 671.030 from the application of ORS 671.010 to 671.220 and exempted under ORS 672.060 from the registration requirements of ORS 672.002 to 672.325; and

(b) Notwithstanding ORS 671.010 to 671.220 and 672.002 to 672.325, for structures that are metal or wood frame Use and Occupancy Classification Group U structures under the structural specialty code.

(2) A Department of Consumer and Business Services employee, who is licensed or registered under ORS 671.010 to 671.220 or 672.002 to 672.325, who is acting within the scope of that employment and who is providing typical [*plans*] **drawings** and specifications under subsection (1) of this section, is not required to seal or sign the typical [*plans*] **drawings** and specifications and is not subject to disciplinary action under ORS 671.010 to 671.220 or 672.002 to 672.325 based on providing those typical [*plans*] **drawings** and specifications.

(3) A building official or inspector, as those terms are defined in ORS 455.715, when acting within the scope of direct employment by a municipality, may provide typical drawings or specifications for structures of a type for which the provision of drawings or specifications is exempted under ORS 671.030 from the application of ORS 671.010 to 671.220 and exempted under ORS 672.060 from the registration requirements of ORS 672.002 to 672.325. This subsection does not alter any applicable requirement under ORS 671.010 to 671.220 or 672.002 to 672.325 regarding stamps and seals for a set of plans for a structure.

SECTION 21b. If Senate Bill 39 becomes law, section 3, chapter 97, Oregon Laws 2019 (Enrolled Senate Bill 39), is amended to read:

Sec. 3. The amendments to ORS 455.062 and 672.060 by sections 1 and 2 [*of this 2019 Act*]**, chapter 97, Oregon Laws 2019 (Enrolled Senate Bill 39), and section 21a of this 2019 Act** apply to work performed, and offers made, on or after the effective date of [*this 2019 Act*] **chapter 97, Oregon Laws 2019 (Enrolled Senate Bill 39)**.

SECTION 22. In addition to and not in lieu of any other appropriation, there is appropriated to the Department of Land Conservation and Development, for the biennium beginning July 1, 2019, out of the General Fund, the amount of $1,000,000, to provide technical assistance to local governments to implement sections 4 to 6 and 15 of this 2019 Act and the amendments to ORS 197.296, 197.299, 197.303, 197.319, 197.320, 215.416, 215.441, 227.175 and 227.500 and section 1, chapter 47, Oregon Laws 2018, by sections 8 to 13 and 17 to 20 of this 2019 Act.

SECTION 23. In addition to and not in lieu of any other appropriation, there is appropriated to the Housing and Community Services Department, for the biennium beginning July 1, 2019, out of the General Fund, the amount of $655,274, for research, administration and reporting that relate to a regional housing needs analysis described in section 1 of this 2019 Act.

SECTION 24. (1) Sections 4 to 6 of this 2019 Act and the amendments to ORS 197.296, 197.299, 197.303, 197.319 and 197.320 and section 1, chapter 47, Oregon Laws 2018, by sections 8 to 13 of this 2019 Act become operative on January 1, 2020.

(2) The Land Conservation and Development Commission, the Department of Land Conservation and Development and the Housing and Community Services Department may take any action before the operative date specified in subsection (1) of this section that is necessary for the departments and the commission to exercise, on or after the operative date specified in subsection (1) of this section, all of the duties, functions and powers conferred on the departments and the commission by sections 4 to 6 of this 2019 Act and the amendments to ORS 197.296, 197.299, 197.303, 197.319, 197.320 and section 1, chapter 47, Oregon Laws 2018, by sections 8 to 13 of this 2019 Act.

SECTION 25. This 2019 Act being necessary for the immediate preservation of the public peace, health and safety, an emergency is declared to exist, and this 2019 Act takes effect on its passage.
