# TABLE OF CONTENTS

	Page
<b><u>EXECUTIVE SUMMARY</u></b>	
Conveyance System .....	ES-1
Regulatory Setting .....	ES-1
Description of Existing Collection System.....	ES-1
Flow Monitoring .....	ES-3
Flow Development and Calibration .....	ES-3
System Capacity Performance .....	ES-6
Structural Condition Data Evaluation.....	ES-7
Alternatives Evaluation.....	ES-8
Collection System Recommended Plan .....	ES-8
Water Reclamation Facility .....	ES-10
Existing Wastewater Treatment Facilities .....	ES-10
Wastewater Flows and Loads .....	ES-12
Regulatory Requirements .....	ES-12
Liquid Stream Treatment Alternatives .....	ES-15
Solids Management Alternatives .....	ES-20
Water Reclamation.....	ES-23
Water Reclamation Facility Recommended Plan .....	ES-24
Implementation Plan .....	ES-27
<b><u>CHAPTER 1. BACKGROUND</u></b>	
Introduction.....	1-1
Regulatory Setting .....	1-1
McMinnville Sewer Master Plan Update.....	1-1
McMinnville Wet Weather Overflow Management Plan (WWOMP).....	1-1
McMinnville Infiltration and Inflow Correction Plan .....	1-2
McMinnville Collection System Facilities Plan .....	1-2
<b><u>CHAPTER 2. EXISTING COLLECTION SYSTEM FACILITIES</u></b>	
Description of Existing Collection System.....	2-1
Model Selection and Development.....	2-3
Model Selection Process .....	2-3
Recommendation .....	2-3
Data Sources and Modeled System Elements.....	2-4
Modeled System Elements.....	2-4
Data Sources .....	2-4
Flow Monitoring .....	2-6
Overview.....	2-6
Monitoring Contractor Selection .....	2-6
Monitoring Locations and Method .....	2-6

## TABLE OF CONTENTS (continued)

	Page
Monitoring Installation/Removal and Data Monitoring .....	2-8
Conclusion .....	2-8
Monitor Data Evaluation .....	2-8
Rainfall-Derived Infiltration and Inflow (RDII) Analysis.....	2-8
Regression Analysis.....	2-9
Calibration .....	2-11
Accuracy of Flow Estimates .....	2-11
Future Flow Monitoring Recommendations.....	2-12
<b><u>CHAPTER 3. EXISTING AND FUTURE FLOWS AND DEMANDS</u></b>	
Introduction.....	3-1
Land Use/acres/EDUs.....	3-1
Planning Area .....	3-1
Topography .....	3-1
Soils .....	3-4
Climate.....	3-4
Historical Population Trends .....	3-5
Land Use .....	3-5
Development Forecasts.....	3-8
Measure 37 Issues.....	3-9
Flow Development.....	3-10
Wet Season Average Base Flow Development .....	3-10
Wet Weather Flow Development.....	3-11
Design Storms.....	3-13
Application of Regression Analysis .....	3-13
Flow Distribution .....	3-16
Hydraulic Model Calibration.....	3-16
Application of Calibrated Model .....	3-17
<b><u>CHAPTER 4. SYSTEM CAPACITY PERFORMANCE</u></b>	
Existing System Deficiencies .....	4-1
Buildout Pipeline Deficiencies .....	4-9
Pump Station Deficiencies.....	4-12
Conclusion .....	4-12
<b><u>CHAPTER 5. STRUCTURAL CONDITION DATA EVALUATION</u></b>	
Summary .....	5-1
Data Characteristics .....	5-1
System Characteristics.....	5-2
Summary of Known Deficiencies.....	5-3
System Repair, Rehabilitation and Replacement.....	5-10

## TABLE OF CONTENTS (continued)

	Page
Review of Selected Data.....	5-13
Integration with CMOM Findings .....	5-13
Condition Assessment.....	5-13
Data Management and Support.....	5-13
Recommendations for Future Activities and CMOM Compliance .....	5-14
CCTV Inspection Procedures .....	5-14
System Maintenance .....	5-14
Level of Service and Repair Prioritization .....	5-14
<b><u>CHAPTER 6. ALTERNATIVES EVALUATION</u></b>	
Introduction.....	6-1
Approach.....	6-1
Improvement Combinations.....	6-7
Cost Analysis .....	6-7
Conditions CT1-4 (72-hour Storm Duration) .....	6-16
Conditions S1-2 (72-hour Storm Duration) .....	6-21
Conditions CT5-8 (24-hour Storm Duration) .....	6-21
Observations and Risk Assessment .....	6-21
Observations .....	6-21
Risk Assessment .....	6-27
Conclusion .....	6-29
<b><u>CHAPTER 7. RECOMMENDED WET WEATHER MANAGEMENT PLAN</u></b>	
Introduction.....	7-1
Plan Objective.....	7-1
Summary of Completed Overflow Management Projects .....	7-1
Recommended Plan .....	7-3
Capital Cost Estimates .....	7-4
Future Development.....	7-7
Plan Summary .....	7-10
Program Financing.....	7-12
Staffing.....	7-13
Plan Implementation Variables.....	7-13
5-Year Capital Improvement Plan .....	7-14
Long-Term Management Activities.....	7-14
I/I Best Management Practices .....	7-14

## List of Tables

Table ES-1. Collection System Pipe Length and Sub-basin Gross Area within the UGB .....	ES-2
Table ES-2. Model Results of the Peak Wet Weather Flows .....	ES-7
Table ES-3. Recommended Collection System Improvements for Existing and Future Conditions, 5-year, 24-hour Storm Event with Recommended Rehabilitation .....	ES-10
Table ES-4. Summary of WRF Design Flows and Loads after Collection System Rehabilitation.....	ES-13
Table ES-5. Capital Costs for the WRF Recommended Plan.....	ES-26
Table ES-6. Implementation Plan .....	ES-28
Table 2-1. McMinnville Collection System Pipe Length and Sub-basin Gross Area Within the UGB .....	2-1
Table 2-2. Pump Station Inventory.....	2-2
Table 2-3. Final Monitoring Plan .....	2-7
Table 3-1. Historical Precipitation (inches) – (1971-2000).....	3-4
Table 3-2. Historical Population Trends – 1980 through 2005 .....	3-5
Table 3-3. Land Use Designation by Basin Within UGB – Gross Area .....	3-6
Table 3-4. Developed Land Within UGB – Existing Net Area .....	3-8
Table 3-5. Developed Land Within Proposed UGB – Future Additional .....	3-9
Table 3-6. Developed Land Within Proposed UGB – Buildout Total Net Area .....	3-9
Table 3-7. Existing and Future Wet Season ABF (Routed Flows).....	3-11
Table 3-8. Model Results of the Peak Wet Weather Flows.....	3-18
Table 4-1. Existing Condition Flooding Locations and Volumes .....	4-4
Table 4-2. Buildout Condition Flooding Locations and Volumes.....	4-9
Table 4-3. Firm Capacity Versus Peak 5-year Flow.....	4-12
Table 5-1. Pipe Length Summary Table for Each Diameter Size.....	5-2
Table 5-2. Planned and Potential City Maintenance Projects.....	5-4
Table 5-3. Pipe Segments with Structural Rating Score >90 .....	5-8
Table 5-4. Master Plan Equipment List .....	5-9
Table 5-5. Pipe Rehabilitation Options.....	5-11
Table 5-6. Possible Pipe Rating System .....	5-15
Table 5-7. Common Defects by Grade .....	5-15
Table 6-1. Model Results of the Peak Wet Weather Flows.....	6-3
Table 6-2. Pipe Replacement Unit Cost (ENR 8089).....	6-4
Table 6-3. Estimated Rehabilitation Costs and RDI/I Reduction for Targeted Basins .....	6-6
Table 6-4. Required Conveyance System Improvements for Existing Conditions, 5-year, 72-hour Storm Event with no Rehabilitation .....	6-18
Table 6-5. Required Pump Station Improvements for Existing Conditions, 5-year, 72-hour Storm Event with no Rehabilitation.....	6-18
Table 6-6. Required Collection System Improvements for Buildout Conditions, 5-year, 72-hour Storm Event with no Rehabilitation .....	6-19
Table 6-7. Required Pump Station Improvements for Buildout Conditions, 5-year, 72-hour Storm Event with no Rehabilitation.....	6-19
Table 6-8. Wet Weather Flow Cost Effectiveness Analysis (72-hour Storm).....	6-20

## TABLE OF CONTENTS (continued)

	Page
Table 6-9. Required Collection System Improvements for Buildout Conditions, 5-year, 24-hour Storm Event with no Rehabilitation.....	6-24
Table 6-10. Required Pump Station Improvements for Buildout Conditions, 5-year, 24-hour Storm Event with no Rehabilitation.....	6-24
Table 6-11. Required Collection System Improvements for Existing Conditions, 5-year, 24-hour Storm Event with no Rehabilitation.....	6-25
Table 6-12. Required Pump Station Improvements for Existing Conditions, 5-year, 24-hour Storm Event with no Rehabilitation.....	6-25
Table 6-13. Wet Weather Flow Cost Effectiveness Analysis (24-hour Storm).....	6-27
Table 7-1. Comparison of Peak Flow by Basin for Existing and Future Conditions, 5-year, 24-hour Storm Event With and Without Recommended Rehabilitation.....	7-5
Table 7-2. Pump Station Capacity Versus Modeled 5-year, 24-hour Storm Flow.....	7-5
Table 7-3. Required Collection System Improvements for Existing and Future Conditions, 5-year, 24-hour Storm Event With Recommended Rehabilitation.....	7-7
Table 7-4. Pipeline Extensions Required to Serve Future Development.....	7-10
Table 7-5. New Pump Stations Required to Serve Future Development.....	7-10
Table 7-6. Wet Weather Overflow Management Project List and Implementation Schedule.....	7-11
Table 7-7. Current City of McMinnville Collection System Staff Requirements.....	7-13

## List of Figures

Figure ES-1. City of McMinnville Existing Wastewater Collection System.....	ES-4
Figure ES-2. Planning Boundaries.....	ES-5
Figure ES-3. Sewer System Recommended Improvements 5-year, 24-hour Storm.....	ES-11
Figure ES-4. City of McMinnville Water Reclamation Facility Existing Site Plan and Plant Layout.....	ES-14
Figure ES-5. Dry Weather Alternative Management Strategy: Expansion of Existing Facilities.....	ES-18
Figure ES-6. Wet Weather Alternative Management Strategy: Collection System Improvements.....	ES-18
Figure ES-7. Recommended Solids Management Strategy.....	ES-22
Figure ES-8. Recommended Plan and Plant Layout.....	ES-25
Figure 2-1. City of McMinnville Existing Wastewater Collection System.....	2-5
Figure 2-2. Example of Regression Equation Creation.....	2-10
Figure 2-3. Cozine PS Modeled vs. Measured Flow (12/17/05 to 1/26/06).....	2-13
Figure 2-4. Raw Sewage PS Modeled vs. Measured Flow (12/17/05 to 1/26/06).....	2-14
Figure 3-1. Planning Boundaries.....	3-2
Figure 3-2. Drainage Basins.....	3-3
Figure 3-3. Zoning Map.....	3-7
Figure 3-4. Wet Weather Dry Weather Flow at RSPS.....	3-12
Figure 3-5. 5-year Frequency Rainfall Depth-Duration Curve.....	3-14
Figure 3-6. 5-year Design Storm.....	3-15
Figure 3-7. Raw Sewage Ps Modeled vs. Measured flow (12/17/05 to 1/26/06).....	3-19

## TABLE OF CONTENTS (continued)

	Page
Figure 3-8. Cozine PS Modeled vs. Measured Flow (12/17/05 to 1/16/06).....	3-20
Figure 3-9. Existing and Buildout Flow at RSPS for 5-year, 24-hour Rainfall.....	3-21
Figure 3-10. Existing and Buildout Flow at RSPS for 5-year, 72-hour Rainfall.....	3-22
Figure 4-1. Sewer System Deficiencies Existing Land Use Condition 5-year, 24-hour Storm Event.....	4-2
Figure 4-2. Sewer System Deficiencies Existing Land Use Condition 5-year, 72-hour Storm Event.....	4-3
Figure 4-3. 5-year, 72-hour Storm Water Elevation Profile: Michelbook Lane at 17 <sup>th</sup> Street to 7 <sup>th</sup> Street at Yamhill Street – Existing System .....	4-5
Figure 4-4. 5-year, 72-hour Storm Water Elevation Profile: Michelbook Lane at 17 <sup>th</sup> Street to 7 <sup>th</sup> Street at Yamhill Street – Existing System .....	4-6
Figure 4-5. 5-year, 72-hour Storm Water Elevation Profile: 19 <sup>th</sup> Street at Baker Street to 17 <sup>th</sup> Street at Evans Street– Existing System .....	4-7
Figure 4-6. 5-year, 72-hour Storm Water Elevation Profile: Lafayette Ave at 13 <sup>th</sup> to RSPS – Existing System .....	4-8
Figure 4-7. Sewer System Deficiencies Buildout Land Use Condition 5-year, 24-hour Storm Event.....	4-10
Figure 4-8. Sewer System Deficiencies Buildout Land Use Condition 5-year, 72-hour Storm Event.....	4-11
