Good afternoon, Jamie.

Please find the attached supplemental traffic evaluation completed for the Oak Ridge Meadows development. This memo addresses concerns raised by residents and Councilors regarding the potential traffic impacts to adjacent neighborhoods. Our findings show no evidence that Oak Ridge Meadows will create any noticeable increases in delay accessing NW Baker Creek Road from the surrounding street network.

This memo does not address testimony (received by Anniedear Chappell) related to the posted speed limit on NW Baker Creek Road, as this is beyond the purview of this application. It may be worth noting to the Council that speed limits are set by ODOT and changes require a full speed study, which can only be initiated by City staff.

Please feel free to give me a call if you have any questions!

Thanks!

Lacy

MEMORANDUM

DATE: July 9, 2019

DKS

TO: Lori Zumwalt | Premier Development, LLC

FROM: Lacy Brown, Ph.D., P.E. | DKS Associates

SUBJECT: Oak Ridge Meadows – Supplemental Traffic Evaluation

This memorandum provides a summary of additional field observations and traffic analysis conducted in July 2019 related to the development of the Oak Ridge Meadows subdivision in McMinnville, Oregon. The findings in this memorandum address concerns raised regarding the impact the development will have on the transportation system, with an emphasis on vehicle delay incurred while accessing NW Baker Creek Road from adjacent neighborhoods.

FIELD OBSERVATIONS

Although field work conducted previously showed no excessive delay was incurred by drivers at the intersections of NW Baker Creek Road/NW Oak Ridge Drive and NW Baker Creek Road/Merlot Drive, the scope of field observations was expanded to verify that nearby intersections operated similarly.¹

DKS conducted field observations during the morning and evening peak hours to observe vehicle delay at the following five intersections.²

- NW Baker Creek Road/ NW Oak Ridge Drive
- NW Baker Creek Road/ NW Greenbriar Drive
- NW Baker Creek Road/Merlot Drive
- NW Baker Creek Road/ NW Pinehurst Drive
- NW Baker Creek Road/ NW Alice Kelly Drive

These intersections were selected for observation and analysis because they are adjacent to the study area and, due to the volume of traffic along NW Baker Creek Road, will have higher vehicle delays than the local street intersections within the adjacent neighborhoods. In other words, evaluation of these intersections captures the “worst case scenario” of the potential traffic impacts of the Oak Ridge Meadows development. It should be noted that these observations were collected only to confirm the validity of the vehicle delays estimated through capacity analysis, as described in the following section.

¹ Oak Ridge Meadows Supplemental Traffic Evaluation Memorandum. DKS Associated. May 2019.

² Field observations conducted from 4:00-5:30 PM on July 2, 2019 and 7:30-9:00 AM on July 3, 2019.

As shown in Table 1, the average delays range from 1.5 to 15.4 seconds, which corresponds to a level of service (LOS) of C or better. These values are consistent with the findings of the existing conditions analysis in the original Traffic Impact Analysis (TIA), the field observations conducted in May 2019, and the existing conditions analysis presented later in this memorandum.³

Table 1. Observed Vehicle Delay

NW Baker Creek Road/NW Alice Kelly Court	1.5	1.5	1.5	2.5	18.0	8.5

Delay = Delay (sec.) for side-street stop-controlled movements
Note: Average vehicle delay is the standard metric for evaluating intersection operations.
Note: Side-street traffic volumes are very low at these intersections, resulting in a low number of observable vehicles at each location.
Average delay times are calculated from a minimum of two and maximum of nine observations per location.

TRAFFIC OPERATIONS ANALYSIS

In addition to delay observations, DKS also conducted traffic operations analysis (using standard Highway Capacity Manual methodologies) at the intersections listed above as well as the following five intersections.

- NW Oak Ridge Drive/ NW Chardonnay Drive
- NW Oak Ridge Drive/ NW Riesling Way
- NW Oak Ridge Drive/NW Pinot Noir Drive
- Merlot Drive/NW Zinfandel Loop
- Merlot Drive/NW Pinot Noir Drive

Intersection Traffic Volumes

Peak hour turning movement volumes were collected at the intersections of NW Baker Creek Road/NW Oak Ridge Drive and NW Baker Creek Road/Merlot Drive as part of the original TIA for the Oak Ridge Meadows development. During field observations, DKS collected additional peak 15-

³ Oak Ridge Meadows Traffic Impact Analysis. DKS Associates. March 2019.

minute turning movement counts at the intersection of NW Baker Creek Road/NW Pinehurst Drive, which were used to estimate the peak hour volumes at this intersection.⁴ Peak hour turning movement volumes at the remaining intersections were estimated based on traffic counts at adjacent intersections and the number of residential units that can be accessed via each of the intersections. In all cases, the higher of observed or estimated volumes were used to provide the most conservative evaluation of traffic conditions. Because of this, traffic volumes for certain movements at some locations are higher in this analysis than the previously collected traffic counts. Traffic volumes and operational analysis reports are included as an attachment to this memorandum.

Analysis Results

The existing conditions intersection operations analysis results for all ten study intersections are shown in Table 2.⁵ As shown, all intersections operate well under capacity with minimal delay and meet all City operating standards.

⁴ Peak 15-minute period occurred from 7:45-8:00 AM and 4:55-5:10 PM, determined from the two-hour traffic counts collected for the March 2019 TIA.

⁵ Intersections that are currently uncontrolled (no stop signs present) were analyzed as all-way stop.

The same ten intersections were also analyzed for future interim build conditions, which assumes 100% of the volume of traffic generated by the Oak Ridge Meadows development will travel through the existing neighborhood to access NW Baker Creek Road (no connection at NW Shadden Drive).⁶ This scenario captures the “worst case” traffic conditions at all study intersections. It should be noted that forecasted traffic volumes and intersection operations at NW Pinehurst Drive and NW Alice Kelly Court will remain the same with or without an extension of NW Shadden Drive, as all Oak Ridge Meadows traffic will load on-to and off-of NW Baker Creek Road upstream of those locations regardless of the access configuration.

The results of the future interim build analysis are presented in Table 3. As shown, all intersections will continue to operate at acceptable levels with ample excess capacity once the Oak Ridge Meadows development is completed.

⁶ This analysis maintains the same trip generation and trip distribution assumptions outlined in the March 2019 TIA, which assumed 70% of trips would use NW Oak Ridge Drive and 30% would use Merlot Drive to access NW Baker Creek Road.

Table 4 summarizes the estimated net change in average delay that drivers will experience once the Oak Ridge Meadows development is constructed and fully occupied (Future Interim Build delay minus Existing Conditions delay). As shown, most intersections will see an increase in delay of less than one second during peak periods. The largest increase in average delay is 4.4 seconds at the intersection of NW Baker Creek Road/NW Oak Ridge Drive during the AM peak hour.

FINDINGS

The primary concern raised by neighbors has been the impact that the Oak Ridge Meadows development will have on traffic operations, particularly with the ability of residents to turn out onto NW Baker Creek Road from the neighborhood streets. Two separate field studies were completed to observe traffic operations, queuing, and delay at intersections in the vicinity of the site.

Despite the perception of excessive side-street vehicle delays under current traffic conditions, field observations indicated that drivers accessing NW Baker Creek Road experience delays that are within typical ranges for two-way stop controlled intersections. These findings were further confirmed by the operational analyses completed as part of this memorandum and the original TIA, which followed national best practices and showed that all intersections operate acceptably with minimal delay and are well below intersection capacity thresholds set forth by the City.

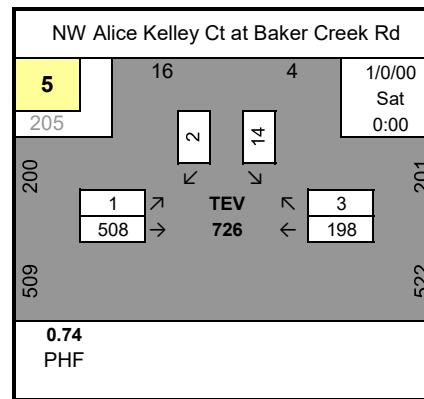

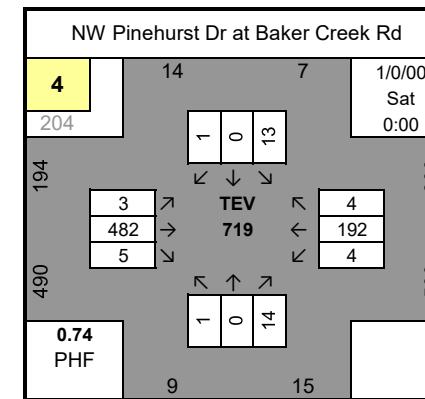

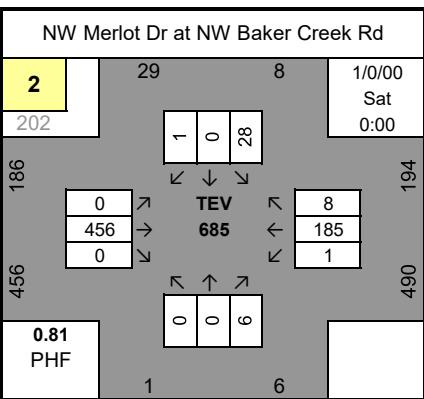

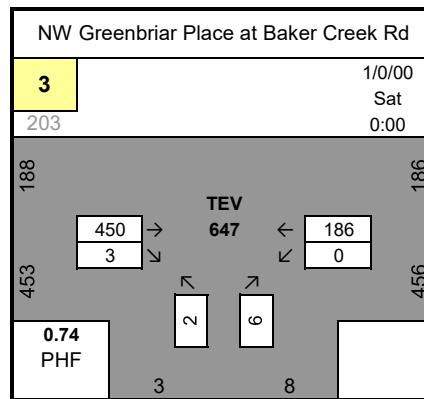

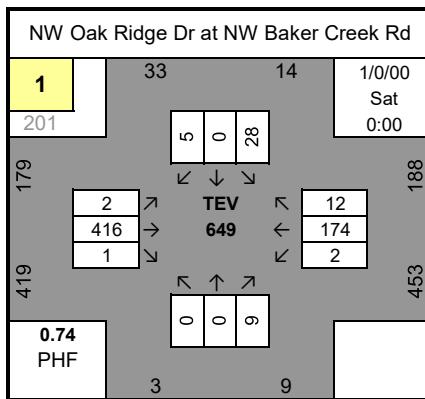

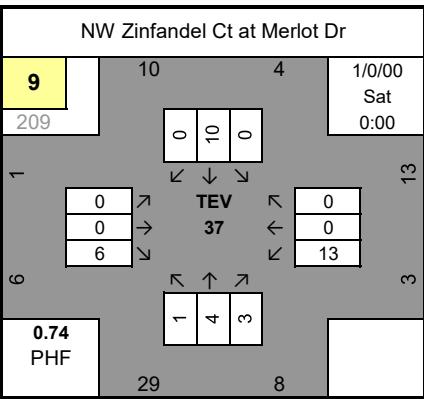

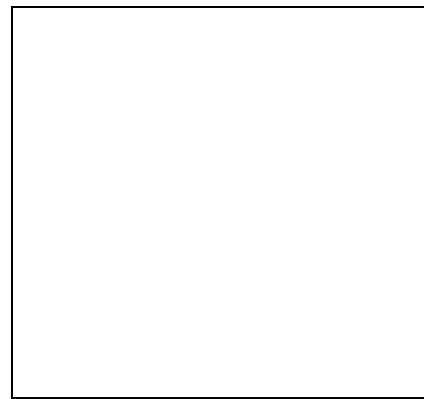

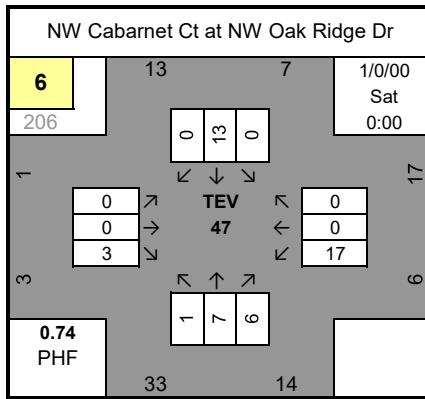

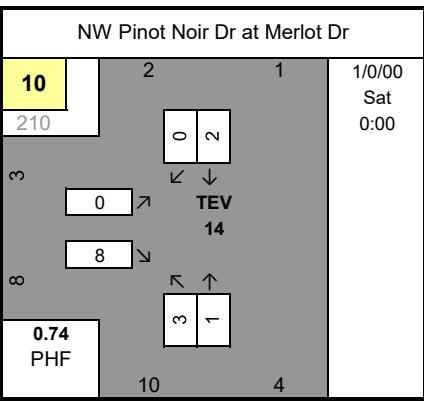

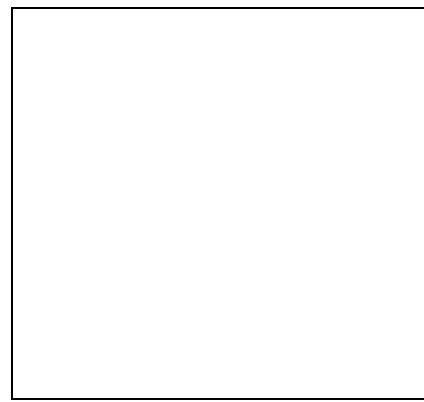

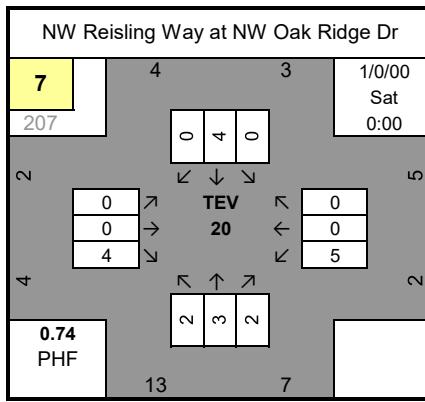

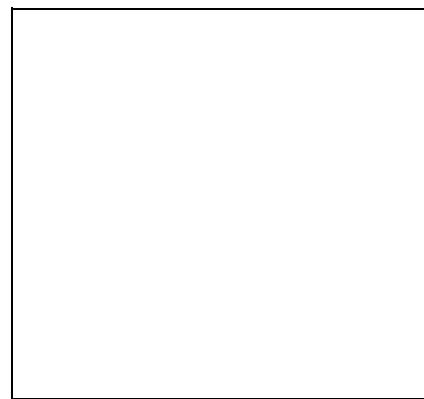

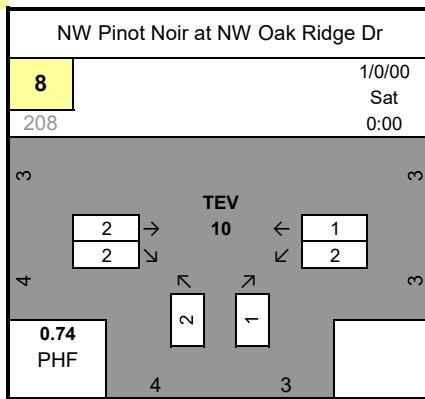

There is no evidence that the additional traffic generated by the Oak Ridge Meadows development will degrade traffic operations, and the estimated increases in delay for accessing NW Baker Creek Drive are, for all intents and purposes, negligible (less than five seconds).
